

Life should be
this simple.

Our Story

In 1982, in a tiny carriage house in the rolling hills of Pennsylvania, a vintage roaster was loaded with fresh beans and Bucks County Coffee was Born. It all started with a passion for coffee, and that passion still burns brighter than ever. All our coffees are roasted and packaged per order, this commitment to freshness has made us a local favorite for over 35 years!

At Bucks County Coffee we strive for measurable environmental and social sustainability in everything we do. This starts with our farmers and coops and continues through our supply chain partners all the way to our facility. We focus on continuous improvement and understand impacting change requires diligent effort.

We work with Farmers and Coops focused on quality and sustainability. Our contracts are executed long before each harvest in order to reach specific goals for quality and sustainability. Transparency and direct communication are keys to establishing long term success.

In 2016 we made a decision to move away from K style cups and brewers. This was not an easy decision as they are used in many homes, offices and hotels. However, we faced the challenge head on as our commitment to the environment is one, we take very seriously. We have replaced many K style brewers with our Biodegradable Pods. Our customers could not be happier, they are now enjoying great coffee and helping the environment by cutting plastic waste.

We strive not only to bring you a great cup of coffee, but also to help the coffee industry become environmentally sensitive and sustainable.
