Get rid of those horrendous creepy crawlies hanging around your home or office before they get a chance to cause thousands of dollars of damage to your property if left unattended. Call on us to provide you with fully trained, experienced and local-to-you, pest control technicians. At CCCGHM, we only use the best products so that we can give you the best results.

We can provide:

- **End of Lease spray** Infestation of these unwelcome insects in your home can really make your skin crawl, as well as pestering your pets. Effective flea control involves treating not only your pet, but all areas around your home or office where fleas or eggs may be hiding. This is often why a lease agreement will require a pest spray at the end of your tenancy.
- **Spider, Cockroaches, Ants (internal and external)** Even the more harmless species can become a problem if you have a spider infestation in or around your house. They leave cobwebs in every corner or like to pop out at unexpected moments from under the bed or a pile of clothes!
 - There are 4000 different cockroach species found all over the world, 30 are considered pests that inhabit in and around human dwellings. Cockroaches are scavengers and will eat almost anything, from human and pet food and waste to grease, leather, hair — even glue and soap.
 - You may find yourself overwhelmed by an ant infestation but, believe it or not, it is possible to protect your home or business and keep them out for good – we guarantee it!
- **Wasps and Bees (external)** European Wasps will aggressively defend their nest by swarming to attack a disturbance. The sting is painful and multiple stings or, a sting in the throat, can be dangerous or fatal. Most of the time a wasp or bee sting will just cause pain and local swelling, but they can be seriously harmful and sometimes fatal for those with an allergy
- **Rodents (mice and rats)** Mice and rats are notoriously responsible for the spread of many diseases and are used to living around human surroundings. Mice and rats have also been known to cause house fires after chewing through electrical cables. Once they have made a nesting area, they can populate extremely fast and, in a short space of time, you could have an infestation. Canberra's most common ones are the House Mouse, Brown Rat and Black Rat.

NOTE: You and any pets will need to be out of the house for up to 2 hours (at least 1 hour)
