Multilayer Universal glue boards

a new generation of “GREEN” glue boards

MultiLayer boards have been developed by **Bianomy** in conjunction with our European manufacturer to be used in insect light traps.

MultiLayer boards are executed with 3 layers of glued sheets, equalling 3 individual traditional boards in its operational life span. Each sheet is printed in black colour with a white counting grid, offering discretion and making it easy to process & count insects on the individual layers.

Product comparison (Traditional vs MultiLayer Board):

	3 x Traditional board	1 x MultiLayer Universal board
Weight	High	Low (Weight saving of around 60 to 65%)
Thickness	Large	Saving of around 60% (volume) on thickness allows for more boards on a pallet, a container, in a car trunk or van
Environment	60% more waste	Green solution – less waste to landfill

MultiLayer boards are REACH compliant and meet very strict European regulations on the use of chemicals used in the glue composition (*) which is why these boards can be considered as Green.

(*) for details see here: www.echa.europa.eu

Summarising the advantages MultiLayer universal boards offer:

- Logistic advantages: Lower transport and lower stock costs
- Lower handling costs (fast service)
- Budget friendly (low price) for high quality boards
- Lesser waste (environmentally friendly)
- Fully meets the strict standard on use of chemicals (*REACH compliant*)
- Stable adhesive (no melting glue)
