

Perlstrahler® CF - Constant Flow

Thanks to its special design, the RST Aerator CF is selfcleaning and cannot get clogged. Dirt particles passing the closemesh input side sieve will necessarily be washed away through the consecutivley assembled coarsemesh fi lter.

One outstanding feature of the Aerator CF is the lenticular, stainless steel outlet filter. With conventional aerators, some residual water is retained in the close-meshed filters once the tap is turned off and this quickly leads to limescale due to evaporation. The patented arrangement of the coarse filter in the Aerator CF enables better and faster drip-down of the residual water. This leads to tangible advantages with respect to limescale and hygiene. The RST Aerator CF requires a special key for installation and removal. Its fully rotating collar provides ultimate antitheft protection.

Versions:

The Aerator CF is available in different versions. Please choose between the options below. Number "x" must be replaced in the model number by one of the following options:

- x = 2 = M22x1 IG, chromeplated
- x = 4 = M24x1 AG, chromeplated
- x = 3 = M22x1 IG, chromeplated, vandalproof
- x = 5 = M24x1 AG, chromeplated, vandalproof

Models:

model	item	fl ow-rate (at 2-12 bar)*
2x205	RST Aerator CF	5 l/min
2x206	RST Aerator CF	6 l/min
2x207	RST Aerator CF	7 l/min
2x208	RST Aerator CF	8 l/min
3140x	Insert	x = 5, 6, 7, 8 l/min

*Due to manufacturing tolerances a variation of +/-10% is possible.
