What Better Feels Like™

Continuing a Legacy

Three generations dedicated to advancing the science and support of whole-body health care

Our story begins in 1952 with my grandfather, Dr. Monte Greenawalt, a young chiropractor whose curiosity and compassion changed the way we understand the body. When he discovered how the feet influence posture and whole-body stability, he created the first spinal pelvic stabilizers, designed to create a more stable foundation for the body so care could be more effective and lasting. What began as a way to better support clinical outcomes evolved into a philosophy of whole-body stabilization that enhances movement, balance, and function. That breakthrough became the foundation of Foot Levelers and has helped tens of millions of patients live healthier, more supported lives.

My father, Kent Greenawalt, Chairman and CEO, carries that legacy forward by championing research, technology, and education. Under his leadership, innovations like 3D scanning of the feet and neck brought new precision to our products and faster product turnaround for doctors and patients. Clinical studies continue to affirm that Foot Levelers custom orthotics can reduce low back pain by as much as 34.5%. His vision strengthens our commitment to helping doctors educate their patients and achieve better outcomes together.

As a third-generation Greenawalt, I stepped into this chapter of our family's story, inspired by the same values. We continue exploring new ways to care for the body, from the ground up, with advanced evaluation tools like Posture Check 3D™ to restorative solutions such as Nexi™, The Most Custom Custom Pillow®. Each innovation reflects our ongoing promise to support your patients with thoughtful, research-driven solutions.

As we look toward the future, our mission remains unchanged: *to help people move, feel, and live better through meaningful innovation and genuine partnership.*

Thank you for allowing Foot Levelers to be a part of your practice, and your patients' journey to optimized health.

In health,

Jamie Greenawalt

Do You Know When to Check Their Orthotics?

Like all forms of care, custom orthotics require regular checkups at:

After the break-in period

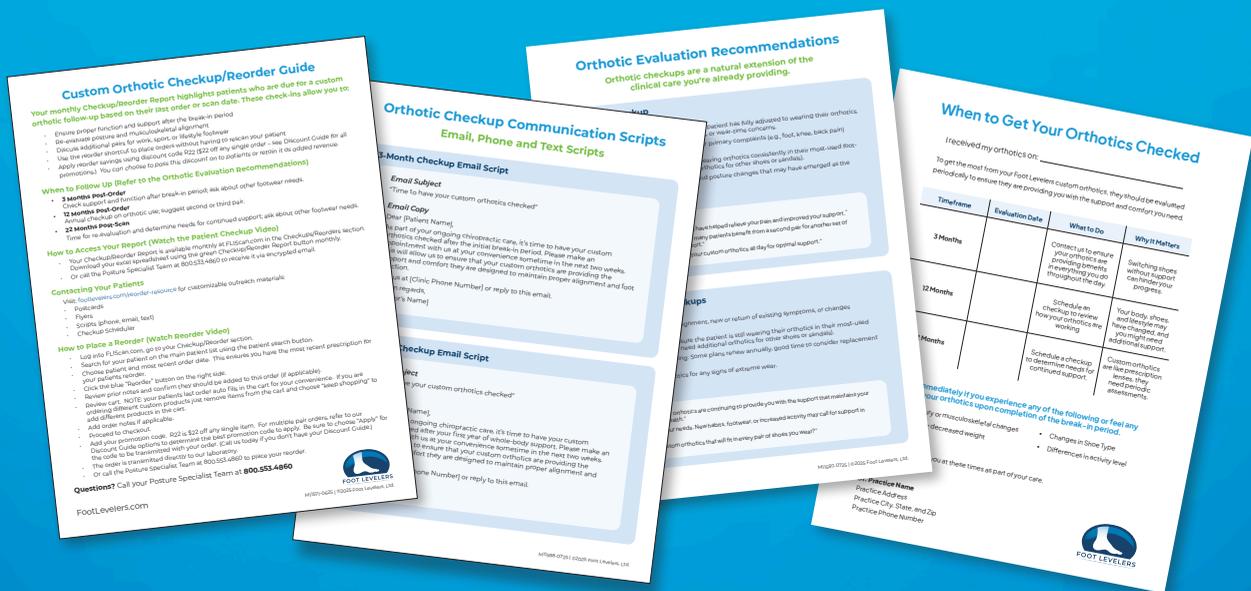

To assess ongoing effectiveness

To determine the need for continued support

Orthotics Checkups also bring patients back in for additional care as needed.

Everything you need to bring patients in for their checkups.

Use this QR code to watch a short video about the new Checkup & Reorder Program

*Casting kit customers, please visit our website at www.footlevelers.com or call us at 800.999.0811 for assistance.

SCANNING TECHNOLOGY & STARTER KIT

Three Ways to Get Started

Every custom orthotic starts with an accurate foot assessment.

Foot Levelers offers three proven ways to begin evaluating patients and prescribing custom orthotics, whether through advanced digital scanning or traditional casting. Each option provides the precision needed to identify imbalances, educate patients, and confidently recommend the right orthotic solution.

1

The Posture Check 3D™ is completely revolutionizing patient communication and posture support. Features include:

- Patient Self-Guided Option
- Personalized Patient Results
- Specific Product Recommendations
- Securely Place Orders Directly from Your Posture Check 3D (Doctor Access Only)
- And much more...

More Data = Better Care

It gathers 280,000 datapoints to analyze the feet and kinetic chain with an additional 130,000 datapoints to analyze the head, neck and shoulders.

Patient Education = Better Compliance

The Posture Check 3D experience takes your patients on a postural journey of self-discovery. As they are scanned, patients visually see how their feet, head, neck and shoulders are impacting all aspects of their musculoskeletal health.

Improved Patient Communication = Better Understanding

A detailed Report of Findings helps patients better understand their:

- Balance Distribution
- Pronation Stability Index®
- Impact Force Assessment
- Tech Neck Index™
- Forward Head Posture

Together with your clinical assessment, your patients will recognize their need for your chiropractic care.

MODERATE PRONATION

SEVERE PRONATION

WHY IT'S IMPORTANT TO SCAN EVERY PATIENT

- » Scanning demonstrates exactly what's happening with your patient's posture
- » Provides instant data for you to correctly diagnose and recommend the best course of care
- » Shows patients the feet are the foundation of the body and the slightest imbalance can cause a major disturbance in the whole-body, particularly the hips, knees, back and neck, increasing compliance of your care plan.

Our Most Prescribed Spinal Pelvic Stabilizers

InMotion®

Perfect for individuals who are on their feet for extended amounts of time throughout the day, including in the office, at school or during everyday activities.

See Page 12

InMotion+®

Designed to help reduce muscle fatigue and enhance performance while active on your feet all day.

See Page 18

XP3® Run Distance

Helps redirect shock away from the body and maximizes rebound at toe-off to increase endurance. It is a must-have for extreme athletes such as marathon runners, triathletes and more.

See Page 26

Extreme Collection

The Extreme Orthotic Collection is designed for maximum support, comfort and durability.

See Page 14

Ultra Collection

The Ultra Orthotics Collection is designed with a thinner profile for light to moderately active patients.

See Page 15

Dress Luxury

Ideal for dress shoes with or without laces, western boots, and fits comfortably in shoes without a removable liner.

See Page 16

5th Avenue Collection

The 5th Ave Collection is designed specifically for discreet support in dress shoes.

See Pages 16-17

ZORBACEL®

Absorbs damaging shock at heel strike.

STANCEGUARD

Provides variable firmness, flexibility and control at midstance.

PROPACEL®

Provides a propulsive boost at toe-off, helping to reduce fatigue.

MAGNET SYSTEM

May enhance your patients' energy, edge and performance. Do not use if you are wearing a pacemaker or electrical implant of any kind, or if you are pregnant.

MOISTURE WICKING

Helps absorb moisture and perspiration to control odor and increase comfort.

WATERPROOF

These products are better able to stand up to moisture and are recommended for patients who live or work in wet and humid environments.

MPAX® TECHNOLOGY

Proprietary, state-of-the-art material is soft, breathable and flexible at rest, but instantly absorbs up to 90% of energy upon impact.

MPAX® PRO

Innovative mid-layer material, infused with dynamic foam technology to reduce and redirect shock away from the foot; maximizes rebound for increased stride distance and to save energy at toe-off.

FAR INFRARED TECHNOLOGY (FIR)

Redirects energy back into the body to help enhance muscle elasticity and performance, stimulate circulation, boost energy and relieve muscle fatigue.

GAIT CYCLE SYSTEM® (GCS)

Only available from Foot Levelers, the GCS is a system comprised of Zorbacel® for shock absorption at heel strike, Stanceguard for variable support at midstance, and Propacel® for a propulsive boost at toe-off.

GAIT CYCLE SYSTEM EXTREME® (GCS-X)

Maximum support and protection from heel strike to toe-off with additional Zorbacel® and Propacel® layers.

DYNAMIC RESPONSE SYSTEM (DRS)

Proprietary arch material acts like a suspension system and enhances stability in all 3 arches by responding to variable loads and uneven terrain.

DYNAMIC RESPONSE SYSTEM EXTREME (DRS-X)

The benefits of DRS plus additional shock absorption in the heel provides greater comfort, better protection and improved performance.

CORE ORTHOTICS

EXTREME

Maximum Cushioning

Extreme includes maximum support, comfort and durability. Extreme comes standard with the Dynamic Response System for shock absorption and the Gait Cycle System Extreme® for maximum protection throughout the gait cycle.

DRS creates stability, absorbs shock and responds to the body's movement in all 3 arches

75% more Zorbacel® for protection from heel strike impact

StanceGuard Provides weight-bearing support at mid-stance

50% more Propacel® in the forefoot provides additional propulsion

Orthotic shown with Active Top

EXTREME ACTIVE™

Recommended for:

- » Patients who live very active lifestyles

Features:

- » Moisture-wicking Dri-Brelle®

ITEM 0912501

EXTREME LUXURY™

Recommended for:

- » Business professionals who stand most of the day
- » Patients who like the feel of luxury under their feet

Features:

- » Lambson vegan leather provides durability with a softer side

ITEM 0912500

EXTREME COMFORT™

Recommended for:

- » Patients who need extreme comfort
- » Patients who stand on hard surfaces for extended periods of time

Features:

- » TechCel material for patients who need maximum cushioning (especially those with sensitive feet)

ITEM 0912502

EXTREME TOUGH™

Recommended for:

- » Patients who put an excessive amount of wear and tear on their orthotics/shoes
- » Patients who have extra weight and need more shock absorption

Features:

- » Genuine leather top cover

ITEM 0912503

ULTRA

Designed for Light/Moderate Activity

Ultra Stabilizing Orthotics are designed with a thinner profile for light/moderately active patients and include the Gait Cycle System® for protection from heel strike to toe-off.

Zorbacel® for protection from heel strike impact

StanceGuard Provides weight-bearing support at mid-stance

Propacel® in the forefoot provides additional propulsion

Orthotic shown with Active Top

ULTRA ACTIVE™

Recommended for:

- » Patients who do light activity

Features:

- » Moisture-wicking Dri-Brelle

The first custom orthotics
just for pregnant women

The Mother Nurture[®] Custom Orthotics System by Foot Levelers

System includes a pair of orthotics for
Trimester 2, Trimester 3, and Postpartum

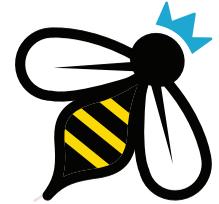

The Mother Nurture System is uniquely designed to:

- Stabilize and align a woman's body during the evolving changes of pregnancy
- Minimize low back and pelvic girdle pain; decrease dizziness and fatigue
- Help establish optimal health conditions for the mother and her developing child

The Mother Nurture[®] Custom Orthotics System

by Foot Levelers

Custom 3-pair orthotic system for these crucial stages of pregnancy:

One cast/scan does it all:

- 1 pair of custom orthotics for **Trimester 2**
- 1 pair of custom orthotics for **Trimester 3**
- 1 pair of custom orthotics for **Postpartum** (the year after baby's birth)
- 1 Bonus Foot Roller (for orthotic break-in and general pain relief)

3-Part System
ITEM 0912805

Custom 2-pair orthotic system for these crucial stages of pregnancy:

One cast/scan does it all:

- 1 pair of custom orthotics for **Trimester 3**
- 1 pair of custom orthotics for **Postpartum** (the year after baby's birth)
- 1 Bonus Foot Roller (for orthotic break-in and general pain relief)

2-Part System
ITEM 0912804

Exclusively for
AGES 5-12

- Helps with stability and support during sports or play
- Helps establish healthy posture as kids grow
- May help alleviate growing pains
- Available with our Posture Protect Program

ITEM 0910702

Note: For children under 9 years of age, Foot Levelers may provide reduced corrections in the prescription.

YOUTH POSTURE PROTECT PROGRAM™

Keep Youth Supported as They Grow

Foot Levelers Youth Posture Protect Program offers an affordable solution for youth ages 5-17 who rapidly outgrow their custom, flexible orthotics. By incorporating this program into your practice, you can significantly impact the lives of your young patients.

Program Benefits:

Establish Healthy Posture Habits: Early intervention is key to promoting healthy posture habits, which can have lifelong benefits for your patients.

Provide Biomechanical Support: Growing pains are common. Custom support will ease discomfort and encourage proper growth.

Reduce Injury Risk: Various activities and sports can increase the risk of injury. Reduce this risk and keep your patients safe by offering custom orthotics.

XP3[®] SPORTS ORTHOTICS

"I've been loving my Run Distance orthotics. They've helped me so much with my heel injury. My overall form is so much better and they've improved my mechanics. Foot Levelers orthotics are the smart way to run."

Sara Hall – Professional Marathoner

Holds second fastest half marathon time & third fastest full marathon for U.S. women.

Keep on the move with our thinnest and lightest custom orthotic, the XP3® Run. Popular among athletes, it delivers superior shock absorption and support, setting the stage for extreme endurance and high-activity pursuits.

Perfect for minimalistic shoes, tight-fitting athletic footwear and shoes without detachable factory liners

Flexible perforated top

MPAX® Technology absorbs up to 90% of energy upon heel impact

53.2% lighter than any of our other orthotics

ITEM 0913101

Take it to the next level with the XP3® Run Distance, our most flexible orthotic with extreme shock absorption and propulsion. Expertly engineered to redirect shock away from the body and maximize rebound at toe-off, this orthotic enhances endurance, making it a must-have for extreme athletes.

Lightweight materials for maximum performance

Flexible perforated top

Perfect for extreme endurance athletes like marathon runners, triathletes, and more

MPAX® Technology absorbs up to 90% of energy upon heel impact

MPAX® Pro Technology maximizes rebound for increased stride distance and saves energy at toe-off

ITEM 0913101

Introducing the XP3® Field, an orthotic custom-designed for outdoor sports enthusiasts. Created to fit into a field shoe or cleat, this orthotic aims to boost power, speed, and stability. Its superior shock absorption feature provides safeguarding against hard ground impacts, while its unique three-arch support enhances the biomechanics of the kinetic chain for an optimal athletic experience.

Durable, moisture-resistant top cover

Enhanced stability in all three arches by responding to variable loads and uneven terrain

MPAX® Technology absorbs up to 90% of energy upon heel impact

Propacel® provides a propulsive boost at toe-off, helping to reduce fatigue

ITEM 0913105

Elevate your golf game with the XP3® Golf orthotic, Ideal for golfers at all levels, it enhances precision drives and promotes optimal body alignment while reducing fatigue.

Moisture-wicking Dri-Brelle top cover keeps feet cool and comfortable

Helps wearer hit golf ball 9-15 yards farther¹

Helps improve your body's alignment & reduces fatigue*

Increases club head velocity 3-5 mph¹

*Contains magnets. Do not use if you are wearing a pacemaker or electrical implant of any kind, or if you are pregnant.

¹ See page 58

ITEM 0910701

Ace your performance with the XP3® Court! The anti-skid base makes it great for quick lateral movements. This orthotic is ideal for enthusiasts and athletes engaged in court sports such as pickleball, tennis, basketball, volleyball, and more.

MPAX® Technology absorbs up to 90% of energy upon heel impact

Resilient, military-grade top cover

MPAX® Pro Technology maximizes rebound for increased stride distance and saves energy at toe-off

StanceGuard provides full foot support, flexibility, and control at mid-stance

ITEM 0910714

Conquer the slopes with the XP3® Ski! Specially designed to offer tailored three-arch support in rigid ski boots, these orthotics come equipped with heightened shock absorption and extra propulsion to make the most out of those powder days. The XP3 Ski™ promotes superior balance and dynamic use of the foot, enhancing your skiing experience.

MPAX® Technology absorbs up to 90% of energy upon heel impact

Cutting-edge temperature regulating material

Propacel™ provides a propulsive boost at toe-off, helping to reduce fatigue

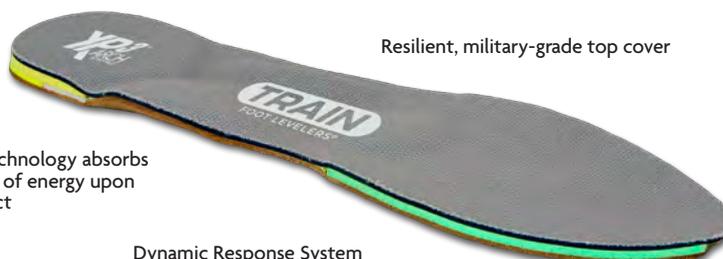

Enhanced stability in all three arches by responding to variable loads and uneven terrain

ITEM 0910715

Elevate your workout routine with our XP3® Train orthotic! Designed with exceptional shock absorption properties and enhanced propulsion. Our XP3 Train™ features a resilient, military-grade top cover for unparalleled durability.

MPAX® Technology absorbs up to 90% of energy upon heel impact

Resilient, military-grade top cover

Dynamic Response System Extreme provides additional shock absorption in the heel, for greater comfort, better protection, and improved performance

MPAX® Pro Technology maximizes rebound for increased stride distance and saves energy at toe-off

LBP/Top 5 Poster
ITEM M12555 (DS)

DOES YOUR BACK HURT?
YOU'RE NOT ALONE. AND WE HAVE SOLUTIONS.

- 37% of adults say LBP affects their ability to sleep
- 54% of LBP cases are from workers who spend their day behind a desk
- ONLY 1/2 of those who've had LBP surgery say it was effective
- \$150 (national average) Cost of surgery to place a metal rod in the back
- 34.5% A recent study proved Foot Levelers custom orthotics reduce LBP by 34.5%

Ask the staff about getting a pair of Foot Levelers custom orthotics.

REASONS TO GET A PAIR OF STABILIZING ORTHOTICS

- EASY, PROVEN CONSERVATIVE CARE**
Foot Levelers orthotics are proven to reduce Low Back Pain by 34.5%. Low back pain is the #1 cause for missed work days is a leading cause of the current opioid crisis.
- SYMMETRICAL FOUNDATION**
Problems in the feet can cause problems throughout the rest of body.
- HEEL STRIKE SHOCK REDUCTION**
Innovative materials absorb shock which helps reduce pain and discomfort caused by heel strike while walking.
- IMPROVE PERFORMANCE**
Studies show Foot Levelers orthotics help increase drive distance on the golf course and reduce pain in those who stand all day.
- DYNAMIC FUNCTION**
Your balance, and the way you walk are improved by wearing Foot Levelers orthotics.

Landmark Study: Shoe Orthotics for Treatment of Chronic Low Back Pain Published in the Archives of Physical Medicine and Rehabilitation in 2017

The conclusions were the following:

- Foot Levelers custom orthotics alone improved Chronic LBP by 34.5%
- The combination of Foot Levelers orthotics and Chiropractic care led to a reduction in LBP by 40.4%
- Foot Levelers orthotics and Chiropractic care resulted in a 32.3% increase in function

JMPT: Effects of Orthotic Intervention and Nine Holes of Golf on Club-Head Velocity in Experienced Golfers

The findings after 6 weeks of wearing custom-fit orthotics included the following:

- Increase in CHV of between 3 and 5 mph
- Relative increase in CHV by up to 7%
- A 5 MPH increase in CHV is equivalent to an approximate increase in golf ball travel distance of 15 yards
- Reduced fatigue associated with playing 9 holes of golf (relative to CHV)

Conclusion: The use of the custom-fit, flexible orthotics in the study had a positive influence on club-head velocity in experienced golfers.

Journal of Chiropractic Medicine: 2005 Chiropractic Adjustments and Orthotics Reduce Symptoms for Standing Workers

The findings after six weeks included the following:

- The control group did not experience much change
- The orthotic only group showed improvement in symptoms, activities of daily living (ADLs), sports and recreation, and quality of life
- The combination of chiropractic care and orthotics showed the greatest improvement in symptoms, ADL's, sports and recreation and quality of life

Conclusion: This study revealed that a combination of chiropractic care and orthotics showed the greatest improvement in symptoms, activities of daily living, sports and recreation and quality of life.

Foot Levelers Case Studies

CASE STUDY: Former Athlete with Bilateral Knee Pain

By: Dr. Mark N. Charette

A 44-year-old male patient presented in my office complaining of gradual-onset bilateral knee pain. The pain in the left knee was concentrated in the medial and anterior area, while the right knee had pain in the lateral area. The patient also complained of low back stiffness and mild to moderate intermittent low back pain.

History

With no apparent traumas or previous history of knee pain (except a 2-month episode of bilateral knee pain as a high school football player), the patient stated a gradual onset of bilateral knee pain beginning one year before my initial visit to my office. He was examined by an orthopedic surgeon, prescribed pain medication and muscle relaxers, and referred to a physical therapist for six weeks of treatment. After six weeks of physical therapy, there was no apparent change in the patient's symptoms. He also stated that he did not want to continue taking medications.

Initial Exam Findings

Significant exam findings include pelvic tilting (Fig. 1), mild restriction of lumbar range of motion, along with significant medial narrowing of the left knee and significant medial narrowing of the right knee laterally, as seen on A/P X-rays (Fig. 2). All orthopedic tests on the knees were essentially negative. A digital foot scan showed bilateral, asymmetrical foot pronation with greater pronation on the left foot (Fig. 3) FABER (Patrick's) Test showed significant restriction of both hips.

Fig. 1

Fig. 2

Fig. 3

Clinical Impressions

The patient was diagnosed with bilateral asymmetrical foot pronation, rotational bilateral knee and hip subluxations, along with lumbar restriction.

Treatment Plan

The patient was treated with conservative chiropractic spinal adjustments and adjustments to both feet using bilateral adjustments for medial/midline, anterior/superior, lateral, inferior, eversion/calcaneus, and distal metatarsal heads. The knees were found to have bilateral posterior tibia tilting and internal rotation of both femur heads, along with hip subluxations that addressed bilateral anterior femur head rotation.

The patient was prescribed Full-Length InMotion® custom orthotics from Foot Levelers. Both feet were initially taped until the orthotics arrived several days later.

Ice packs and cold laser therapy were utilized on both knees and the low back. The patient was assisted with ice packs for home therapy of the knees and low back. Low back orthotics were demonstrated for the patient to perform at home.

Response to Care

The patient was treated twice weekly for 6 weeks and then re-evaluated. This patient was coincident with treatment and home care. The initial response saw a 50% reduction in symptomatology in the first two visits. Then, gradually, over the next five weeks, all symptoms subsided. This patient was very satisfied with his care and elected to continue a wellness care program.

CASE STUDY: Restoring Function: A Welder's Journey to Shoulder Pain Relief and Improved Mobility

By: Dr. Jeremy Wroten, DC

Patient History

My treatment plan was adjustments 2 times weekly for two months, then less weekly for the remainder of the year. When this duration was over, the patient was followed by weekly adjustments to maintain appropriate joint alignment and to maintain appropriate joint function. The patient was followed by weekly adjustments to maintain appropriate joint function. The patient was followed by weekly adjustments to maintain appropriate joint function.

Results

The patient was followed by weekly adjustments to maintain appropriate joint function. The patient was followed by weekly adjustments to maintain appropriate joint function. The patient was followed by weekly adjustments to maintain appropriate joint function.

Exam Findings

I found that his abduction was limited to about 25% of the normal range, though he was able to bring his arm forward without any pain. The patient reported a feeling of heaviness and aching in the right shoulder, which was worse when he lifted heavy objects.

After six weeks of physical therapy, there was no apparent change in the patient's symptoms. He also stated that he did not want to continue taking medications.

CASE STUDY: X-ray Tech with Chronic Neck, Upper Back and Rib Pain

By: Kevin Wong, BS, DC

Patient History

The patient is a 44-year-old male who presented with lower cervical, upper thoracic, and left anterior rib pain. The patient indicated that his job as an X-ray tech involved using his arms and upper body to position and move the x-ray machine in a busy hospital so there is little downtime.

Initial Exam Findings

His review of systems, lifestyle habits, and family history were insignificant. He indicated under his lifestyle history that he was a mild to moderate drinker (2-4 drinks per week). His past medical history pertained only to the chronic nature of his neck, upper back, and rib pain that he has had for the last few years of and the pain has been more noticeable and getting worse over the last 6 months.

Treatment Plan/Methodology

- Physiotherapy modalities: class IV laser therapy, continuous 900 Hz, 10 minutes.
- Chiropractic adjustments to the lower cervical, upper thoracic, and costovertebral rib joints.
- Strengthening/rehabilitation exercises for the neck, neck, and upper thoracic regions.
- Custom-made 3-axis, flexible foot orthotics.

Results

The patient currently is a 2/10 pain scale and his neck mobility index is now at 50. His symptoms have improved significantly. His range of motion for the cervical and thoracic spine are similar by 5-10%. The Soto test, the shoulder depression, and cervical compression tests are no longer positive. Minimal to mild tenderness to palpation with no swelling present.

Clinical Impressions

The patient had a history of getting manual chiropractic adjustments in the C7 region but they were not helping. He was admittedly not consistent with his stretching and strengthening exercises for the neck, shoulder, and thoracic area so that was also a factor. He is an otherwise healthy individual so looking at his body's foundation is important.

Clinical Impressions

Seven digital foot scans were taken: 3 A, three lateral views of the right foot and 1 A view of the left foot. The patient was instructed to stand with the feet parallel to each other, under the knees, the high and low arches of the feet were instructed to keep the feet as close as possible to the lateral walls of the arms slightly abducted for the digital scans. A QR code was placed on the scan for the patient's view through the Foot Levelers website.

Response to Care

The patient was treated twice weekly for 6 weeks and then re-evaluated. This patient was coincident with treatment and home care. The initial response saw a 50% reduction in symptomatology in the first two visits. Then, gradually, over the next five weeks, all symptoms subsided. This patient was very satisfied with his care and elected to continue a wellness care program.
