Create additional cash flow, raise capital, enhance value, and free tied-up cash through bespoke financial structures

Concentrating Solar Power Technology

Trough System
U-shaped reflectors focusing sunlight
onto oil-filled pipes

Power Tower

Heliostats focusing sunrays onto receiver
with molten salt

Dish/Engine System

Mirrored dishes with integrated
combustion engines

2.5GW

Global Capacity

Installed at beginning of 2013

320MW

Ivanpah Project

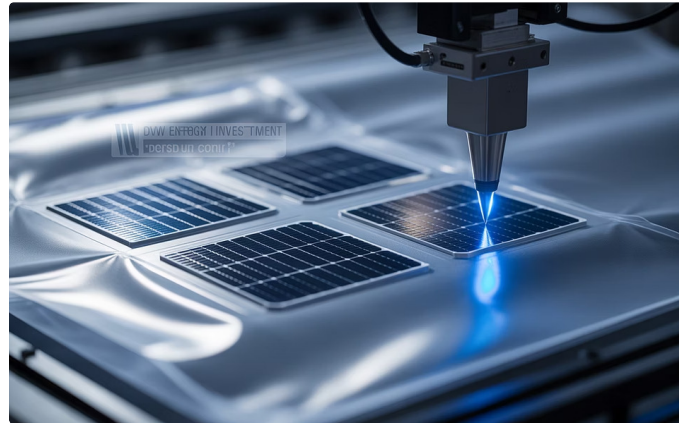

World's biggest CSP plant in California

Emerging Energy Technologies

Floating Wind Turbines

700m depth capability, stronger steadier winds, Japan's 1GW Fukushima project

Printable Solar Cells

Flexible organic cells, 10-50 watts per square meter, ultra-low cost

Biomass Gasification

Converting waste to clean combustible gas, 700°F oxidizer temperatures

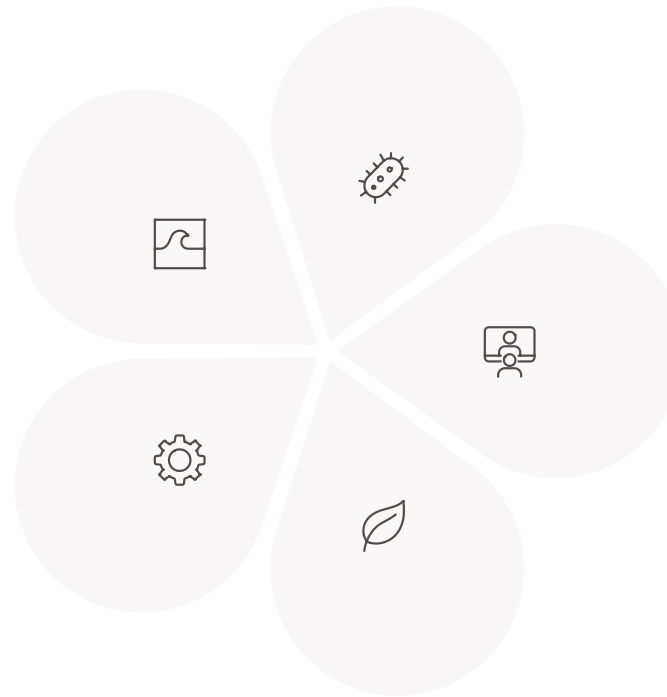

Future Energy Innovations

Ocean Power

Offshore floats, buoys, underwater turbines harnessing waves and tides

Deep Green Technology

Underwater floating devices with hydrodynamic wings for tidal current

Microbial Fuel Cells

Bacteria generating electricity from waste water and organic materials

Power Plant Simulators

40+ years of Orchid® simulation technology for training and optimization

Hybrid Fuel Cells

Solar-thermal biomass conversion with reusable POM catalysts
