

## Cellular Router For Effortless Internet Connectivity

We are able to provide an optional cellular router for those who would rather have a private communications link between the sensor hub, sensors and the Portal.

This is NOT required – as our Portal Hub is designed to connect (plug-and-play) with existing in-house Internet routers.

The cellular router comes fully operational and just requires a 110 outlet.

### Some of the Features:

- **Excellent WiFi area coverage**
- **5 year hot swap replacement warranty**
- **Comes configured/tested – plug and play!**
- **Stand-alone system**

During setup our support staff are on-line to facilitate and answer any of your questions.
