

Smart Briefs sensor

Designed for monitoring individual health attributes

The Briefs sensor is a wearable device that is designed to monitor the humidity status of adult briefs, thereby assuring the comfort and dignity of the wearer.

Integrated into the Portal – you are able to set specific alarms/notifications on any/all of the smart briefs sensor reported readings. These notifications as well as reporting can go out as email, text message or phone alert.

The Smart Briefs sensor is designed so that the main device clips onto the brief's waist band, while the disposable humidity sensor (small wire) is inserted into the brief where required.

Health Features Monitored:

- **Moisture reading**
- **Temperature**

Other features such as time interval for measurement, and notifications on battery power are built in.

All systems are pre-configured, tested and shipped ready to be plug-n-play. During setup are support staff are on-line to facilitate and answer any of your questions.
