STATEMENT

The product is good packing when ship out the factory. All users should strictly abide by the warnings and instructions stated in this manual, any damage and results due to misuse and the neglect of this operating manual will be excluded from the deal responsibility this manual will not informed in addition if have technical changes.

PRODUCTION INTRODUCE

Thank you for choosing this product. This is our latest development of intelligent, efficient products, beautiful and fluent, combined with the advanced technology of stage lighting today. It has advanced international electronic control technology and excellent human nature chemical industry. The product is fully in conformity with the CE standard and the recipient country.

Standard DMX512 signal mode is supported by the RDM protocol.
Production enforces standard IEC 60598-1:2014, IEC60598-2-17:2017.
Channels mode: 34/39CH;
Lamp: OSRAM SIRIUS HRI 470W XL.
Power: 110-240V,50/60Hz.
Total power: 600W.
Display: 2.8-inch screen display, can reverse 180°;
Color Wheel: 11 Colors+2700k +3200k+white+CMY
Color glass: imported Italian ODL color chip, special high temperature resistant raw material, and bright color.
Color Mixing System!
Fixed gobo: 14 gobo + white.
Rotation gobo: 9 gobo+ white, changeable;
Animation Gobo: could Use By Separately Or combined With Gobos
Rotation Prism Wheel 1:8 Facet Prism+linear 6
Facet Prism+cylindrical Prism
Rotation Prism Wheel 2:8 Facet Prism+linear 6
Facet Prism+double Layer Prism
Prism Wheel 1 And Prism Wheel 2 Can Overlay
Frost: separately Frost
Beam angle: 2.5~45°;
USB connector can set DMX address with power and upgrade the software. (RDM function)
Dimmer: 0-100% 1 linear adjustment ;
Pan: 540°; 8Bit/16Bit; / Tilt : 270°; 8Bit/16Bit ;
IP Rate: IP20.
Product size: 405x245x685 mm.
Flightcase: 930x520x910 mm / Carton box: 540x450x650 mm;/N.W: 24.5 KG / G.W: 28 KG(carton).

1. FIXTURE SIZE

Size: 404 (L) ×302 (W) ×662 (H) mm

2. PARTS INTRODUCE

470W HYBRID WITH CMY each part of product structure and main composition product name

Each part of product structure and main composition product name description for better know the light unit.

description to better know the light unit.

470W HYBRID WITH CMY Control panel function introduction, mark for the part name on the panel, familiar with the function of every part.

4. COLOR AND GOBO DESCRIPTION

4.1 Color wheel with 11 colors (2700K+3200K)+ white+CMY, pure colors, perfect effect.

4.2 Static gobo wheel with 14gobos +white, rich gobos;

4.3 Rotate gobo wheel with 9gobos+white, smooth gobo rotation, replace easily;

Two rotation prism, one 8 facet prism, one linear 4 prism, one fixed 16 prism, each two prism can combine using together. Frost function.

5. SAFETY INFORMATION

5.1.1 Safety warning message.

1. This product is only suitable for professional use, and does not apply to security for other purposes. After you got the lights, please check the package whether have any damage caused by transportation. If there is any damage, do not use this fixture, and please contact the dealer or manufacturer as soon as possible.

3. This product is only suitable for indoor, IP20 protection class. Lamps should be kept dry to avoid Moisture, overheating or dusty environment. Prevent lamps come into contact with water or any other liquid. The use of this product should pay attention to: fire, heat, electric shock, ultraviolet radiation, the lamp to explode and so on .

Shedding caused serious or fatal injury. Need to read the instructions before using energized or installing. Follow through the operation of security methods and pay attention to the warning signs on the specification and equipment. If you have any problem with how to safely operate the equipment. Please contact your dealer.

5.1.2 ANTI-HIGH TEMPERATURE

$t_a = 40^\circ\text{C}$

Please don't use the equipment if the temperature above 40°C

5.1.3 BURST PREVENTION

The lens should be changed if it had damaged or any problems. Don't change the non-original manufacturer lens.

Len size: $\Phi 158 \times 43 \text{ mm}$

5.2 TO PREVENT FALLING WOUNDING

Please don't move the package by one person only.

When Hang the fixture, please must verify that the facilities to be able to withstand the weight of the lamps at least 10 times more.

Please make sure the Mounting hardware is strong enough no damage, and insurance for the safety rope as auxiliary security fixed in other facilities will need to verify before installation.

Installing or removing the equipment, to make the pulley below the work location.

5.3 UA PROTECTION AND THE BULB EXPLOSION

Prohibit straight viewpoint with exposed bulbs to avoid UV damage to the eyes;

Do not use the equipment without the lens screen and the lid;

The lens and the light head covers should be timely replaced if any damage to rupture

The Fixture should be used with the protection screen together.

5.4.1 PREVENTION OF ELECTRIC SHOCK

The electrical connection must only be carried out with corresponding qualifications.

Before installing, make sure you use the power voltage lamps that must comply with the identified power, voltage and have an overload or leakage protection.

Each lamp must be properly grounded, installed in accordance with the relevant standards .

Cut off the power when stall or replace the lamp and the .

Prohibit the use of a lightning storm or wet environment.

5.4.2 TO PREVENT BURNING OR FIRE

1. The fixture can be mounted directly on the surface of ordinary combustible

material.

2. Do not short-circuit temperature protection switch or fuse, use the specified type of fuse.

3. The equipment must be installed away from inflammable and explosive materials.

4. The equipment should be projected in a range of 15 meters away objects and projectiles at a temperature less than 60 °  15 .

5. Fan or ventilation, at least in the range of 0.5 meters cannot be an obstacle.

6. Do not place any object on the lens.

7. Handling at least allows the device to cool for 20 minutes

8. Do not replace the non-original parts.

6. PACKING AND SHIPPING

Packed with fly-case of two in one, or carton box. Attach follow accessory.

6.1 ACCESSORY

CONTENT	QUANTITY
USER MANUAL	1
HANG FIXTURE	1
SIGNAL CABLE	1

6.2 TRANSPORT PROTECT LOCK

To protect the light, there is a protect lock; During the transport, the lock catch position need lock in the center, and the fixture keep in vertical state.

6.3 ABOUT PACKING

1. Before packing, make sure power is off, and wait for at least 20mins to cool down.
2. Before cleaning the fixture, make sure X, Y axis protect lock closed.

3. After packing with a plastic bag, high-lift the fixture with two handles besides the product. put the product into the fly-case up-side-down.
4. After packing the product, put the accessory into the accessory case, then close and lock the flight-case.
5. Flight-case only stacked two layers. Prohibited upside down
6. When packed with carton box, equipment should be put into the foam first, then set into a carton, pay attention to the vertical position. 

6.4 UNPACKING

Note: Before unpacking check whether the damage is whether due to the transportation or not, if you find any such damage, please do not use this item, and contact with the dealer or manufacturer as soon as possible.

1. Open the flight-case and discover the inside plastic bag.
2. High-lift the product with two handles beside the bottom base and move it out.
3. Before power goes on, make sure you have opened the X, Y axis lock!

7. INSTALLATION STANDARD

7.1 INSTALLATION RIGGING

The product can be placed on the stage or installed on the bracket in any direction. The quick lock system can quickly and easily press 2 directions to lock on the bracket.

7.2 DEVICE FIXED

1. Before installation, it must be verified that the rigging equipment clamp is not damaged and can bear at least 10 times the weight of the equipment, and that the building can bear at least 10 times of the total weight of the equipment and the fixture fuse accessory equipment.

2. The fixture is installed on the base of the lamp body, the fastener is inserted horizontally into the mounting hole of the base, the handle of the fastener is grasped and rotated clockwise for 1 / 4 turn to lock, and other fasteners are installed in the same way.

3. Verify whether the horizontal and vertical locks have been opened and verify that there are no inflammables or other nearby inflammables within 3 meters of the device.

7.3 Device connection

Attention!

You must use two clamps fix the fixture, and tighten the clamps with 1/4 lock, only fully clockwise rotate 90 ° then can lock the fasteners. Add one safety insurance rope on the hole of light base. Please pay attention not connect to the transport handle.

Attention! One product can accept one input one output. DMX512 cable must use the professional shielded twisted pair cable; standard loudspeaker cable is not reliable to control the long-range

data. 24AWG cable is suitable for more than 300 meters long-distance signal transmission and must add DMX 512 signal amplifier.

Do not use two outputs to separate the connection, if separate a continuous connection to branch, DMX512 splitter is necessary.

If use the DMX512 splitter. First connect DMX512 Splitter input terminal to controller. And then connected from the splitter output terminal to next device.

Do as above guide to connect other device, and finally coupled with terminal insertion

8. AC POWER

8.1 VOLTAGE, POWER, FUSE SPECIFICATION

Input Voltage	Total Power	Frequency
110-240V	600W	50/60HZ

Fuse voltage	Electronic current	Specification
250V	10A	5×20

8.2 Power connection attention:

Attention!

The device must be operated by professionals; Make sure that the voltage of power supply must be comply with the voltage identified on the lamp, and must have an overload or leakage electrical protection.

Live wire(L)	Null(N)	Ground wire	
RED	BLUE	Yellow +Green	

9. LAMP MODEL AND REPLACE

470W HYBRID WITH CMY LAMP

LAMP MODEL	POWER	LIFE/HOUR	LUMEN
OSRAM SIRIUS HRI 470W XL	470w	1500 HOURS	114900Lux

WARNING! There is a safety hazard or damage if installing similar bulb To reduce the risk of damage to light ,do change the lamp before using time over 125% of lamp life .

LAMP REPLACE

Attention! When replacing the lamp it is forbidden to touch lamp with bare hand, to avoid the greasy dirt stains filament. filament must be kept clean. Disconnect the power. Before replacing lamp, fixture takes 20 minutes for lamp cooling. Fasten the head with Y axis protect lock in 60 °

position.

1. Use cross screwdriver to open the light body cover (picture 1)

(1)

2. After opening the cover, you can see the lamp inside, please wait the lamp be cool after used but not touch it in hot status.(picture 2)

(2)

3. One hand press the lamp holder, another hand hold the lamp, and pull out the wires(picture 3,4)

(3)

(4)

4. after taking apart the lamp, please check the inside glasses, clear it will make the light better effect.(Picture 5)

(5)

5. install the lamp after it is replaced.

10. CONTROL PANEL

The control panel has a user-friendly touch screen to display the operation data and other information.

There are four buttons on the right side.

Each button has a dedicated function.

Top button is for upward movement, lower button is for downward movement. The left button is for exiting the selected function where the right button is for confirming the function or data.

13.ROUTINE MAINTENANCE

CLEANING AND MAINTENANCE

- 1、 Turn off the power before opening any cover.
- 2、 After the power supply is broken, the bottom is cooled, and the lid is opened.
- 3、 Dust or floats can be blown gently with a vacuum cleaner or a pressure blow machine.

14.SIMPLE TROUBLESHOOTING

- 1.The whole device reacts... 1) first check whether the power fuse is normal, 2) check whether the output of switching power supply is normal, and the normal output of switching power supply is 27V.
- 2.If a one - way function is not normal... First, find the driving plug of the circuit board of this road, and change the two adjacent drive motor plugs to check out the problem of the board or the wiring or motor.
- 3.If a one-way function is not normal... First, find the driving plug of the circuit board of this road, and change the two adjacent drive motor plugs to check out the problem of the board or the wiring or motor.
- 4.If a few road's function work is not normal... In general, a chip controls several drives at the same time, so it is possible that the chip is abnormal.
