20 Years ...

been improved over the years and now come in several sizes to fit the ever changing needs of the market.

Refrigerated trucks and cold boxes posed another challenge, for this he created a series of filters which when hung from the ceiling worked exactly the same way as the sachets in the boxes. It eliminated the Ethylene Gas and then to everyone's surprise it did something else. They found it kills airborne bacteria, molds and eliminates odors from the air. WOW!! Now in restaurant cold storage boxes fish, meat, poultry, fruits & vegetables can be in the same environment and their odors would not migrate from one to the other and everything stayed fresher longer.

Over the years the fruit packing industry has grown at a phenomenal rate building huge cold storage units at their facilities to store the vast amounts of fruits now being produced and shipped all over the world. These cold storage units are often hundreds of thousands of cubic feet. Dave designed and built the EC-3+ filtration system that literally scrubs the air in these large cold storage units. You can now

find Dave's EC-3+ units all over the world in packing facilities, food service operations, retail distribution centers and now in many large cut flower operations.

Still not convinced? Through a series of controlled scientific tests conducted at the University of California Davis, Ethylene Control Power Pellets have been proven to work exactly as stated. Did we mention they are safe? Well they are, absolutely safe. Not that we recommend it but it has been field tested by some _____ people who actually cut open the sachets and ate some of the pellets. The worst thing that happened to them was that their tongues turned purple, but we'll save those stories for later issues. Last but not least when EC Pellets are used up their chemical properties change to become Manganese Dioxide, a great fertilizer. Does it get any better than that? I don't think so! 20 years have passed and Ethylene Control has grown from obscurity to a Company that can be proud of its contributions to the market that feeds us. Dave will tell you that his success has more to do with the people he works with than anything else. "We have the most dedicated and concerned group of people working together to make Ethylene Control great".
