**NuTrace**TM
Instrument Tracking

Safe Speed

Originally designed for auto racing, the R+ can read a 2D DataMatrix safely in < 0.5 seconds per instrument, irrelevant of instrument contrast, instrument material or position of the code. A good geometrical DataMatrix, R+ will read it.

NuTrace R+ is powered by a laserless beam 2MP camera* and LED lighting. The R+ can read 2D Matrix as small as .010 X .010mm (4mils)

Surface type:

Stainless, shiny surface, mirror finished, low contrast, matte surface and more.

*NuTrace R+ reader DOES NOT generate laser radiation due to the potential reflection of shiny instruments diffusing the light and potentially damaging the operator's eyes.

- 1 Reads off any surface
Bright surface, reflective surface,
matte surface, low contrast
- 2 On-board decoding notification
Beep and LED flash from device hardware
showing the user a successful read
- 3 Small Footprint, Stanley steel rugged
design for easy disinfection.
- 4 Data Export
Fully configurable export options Keyboard
Wedge emulator, virtual COM
