

Hoffmann Ventures, LLC

“The Chemical Solution”

Drilling and Production Chemical Products

Hoffmann Ventures, LLC has “*The Chemical Solution*” for

- Production Treating Chemicals
- Drilling Fluids & Services
- Pipeline Chemical Products
- Specialized Cleaning Products

Hoffmann Ventures, LLC is committed to supplying superior products and services through its technical solutions approach in oil and gas exploration, production and transmission operations.

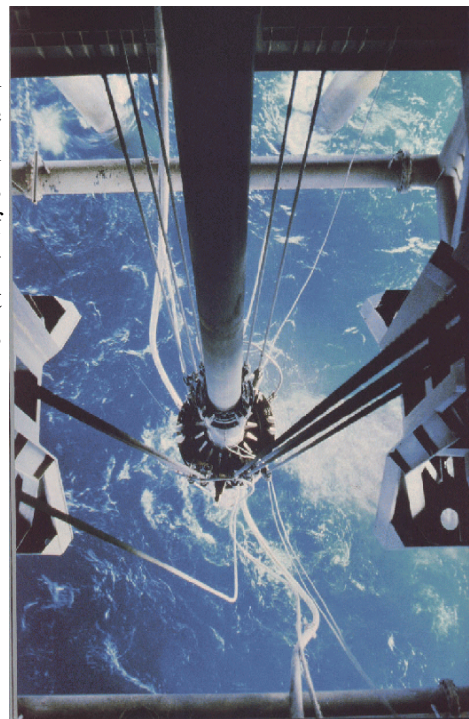

Providing “The Chemical Solution”

At Hoffmann Ventures a team of professionals work to create a “*Chemical Solution*” to solve your particular problem that is unique and proactive. We work from the perspective that all problems can be solved by placing the right complimentary set of solutions to work rather than segmented temporary solutions.

Production Treating Chemical Products & Services

Decades of development support the products offered by Hoffmann Ventures. The production chemical team at Hoffmann Ventures are constantly considering the most recent chemical developments in its oilfield production chemical product line. New technologies are emerging that can positively improve the overall scope of production treating programs. Our technical staff are expertly trained and experienced in the task of formulating the right solution to many of the everyday as well as unique problems encountered in the production of oil & gas onshore and offshore.

- Corrosion Inhibition
- Scale Inhibition
- Paraffin Control
- Bacteria Control
- Gas Well Deliquification
- Water System Drag Reducers
- Low Dose Hydrate Inhibitors

Pipeline Chemical Products & Services

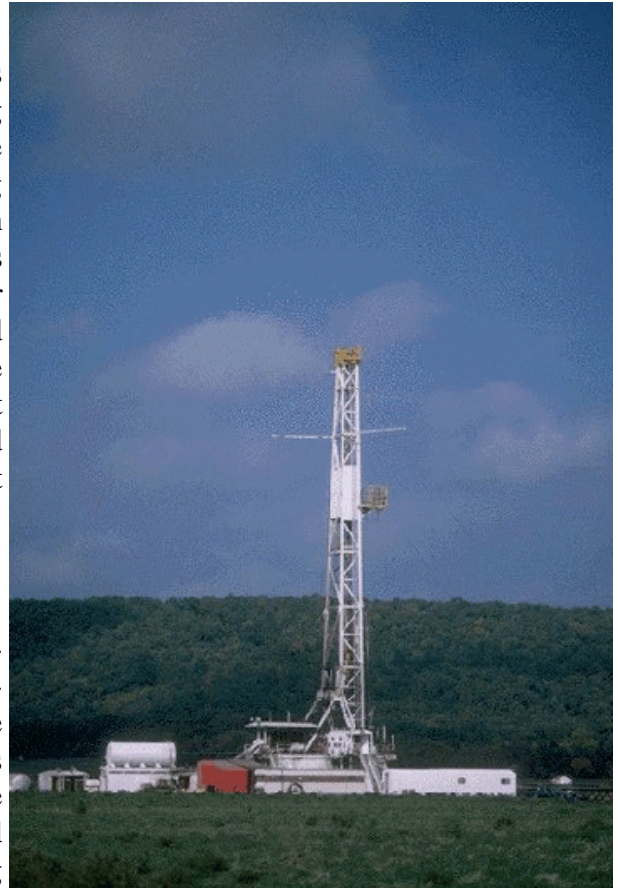

Proper maintenance and operations of oil & gas pipeline systems are kept at the highest in-service level through the application of proper chemical products and monitoring services. Hoffmann Ventures has developed an extensive line of chemical solutions to address problems facing pipeline operators. Maintaining clean pipelines is now possible using advanced online treatment solutions that continuously work to reduce and eliminate iron sulfide (black powder) from the interior sections of oil & gas pipelines. In-line cleaning of pipelines is accomplished using surfactant chemistry that is highly efficient at low application volumes, reducing post job waste costs. Better inspection reports are achieved with fewer pig runs.

Drilling Fluids & Services

Many operators have come to realize that a price per unit is among the least effective methods of monitoring and controlling the overall costs related to the drilling of oil & gas wells. The more effective method is to design a fully engineered drilling fluid system capable of achieving the most effective day vs depth results. Hoffmann Ventures can provide drilling fluid systems and specific additives that are able to drill faster with fewer problems. Hoffmann Ventures offers a full line of drilling mud products and engineering services to operators available directly from Hoffmann Ventures or, if on site technical support is required, through affiliated engineering companies aligned with Hoffmann Ventures and trained to support our product applications.

Gumbo Gone Drilling System

Drilling with water-based drilling fluids through short and extended hydratable shale or gumbo sections leads to many problems that are costly. Hoffmann Ventures has developed the Gumbo Gone drilling system to effectively deal with this problem. The Gumbo Gone system encapsulates clay / shale and prevents bit balling, packing of bottom hole assembly, and plugging of mud return flowlines. The result is faster drilling and better gauged hole performance.

BioSpec™ Stuck Pipe Freeing Agent

Drilling through depleted sand sections can lead to differential sticking of drill string. Stuck pipe incidents as a result of differential sticking can be treated effectively with BioSpec Spot™ one of the most effective synthetic spotting fluid systems on the market. Having the product at the drill site is essential to decrease the pull time to free stuck pipe. BioSpot™ has achieved a record setting 95% success rate when pumped into stuck pipe zones within six hours.

Subsea Hydraulic Control Fluids

Hoffmann Ventures offers a complete line of water-based subsea hydraulic fluids that are used to control subsea control valves, blow out preventors, motion compensators and other equipment systems that require fluids that are 'discharge friendly' in application. The BioClean™ line of products has proven in the lab and in the field to be superior to traditional products.

Quality

It takes more than a professional sales force and an experienced technical team to be the ideal source of specialty chemicals. The unsung heroes of our organization are the devoted people of our operations staff who see to it that our raw materials are rigidly controlled and that our products are made with exacting uniformity from batch to batch. Hoffmann Ventures, LLC Quality Standard is ISO 9001. Our products are formulated and produced to the highest degree of quality possible. Our Environmental Management Policy is ISO 14000 and requires that we consider the environmental aspects of our products and services. A commitment to ISO 9001 production processes and production planning ensures that orders are produced to specifications and delivered on time.
