

Sustainable Packaging

Custom Sustainable Packaging

L-S Industries, Inc. provides several products that qualify as “green” or sustainable packaging products. Sustainability is preserving people, prosperity, and the planet through social, environmental, and economically responsible decision making. These products are made with recyclable HDPE or Polypropylene plastic corrugated. The three primary advantages to using plastic corrugated are:

Long-term cost savings

Environmental concerns

Safety

How do plastic corrugated products help your company?

1. Long-term cost savings, it may seem like a larger up-front investment, and your operations may not be set up for a return system like this but companies who are able to close the supply chain loop and return packaging products such as boxes, bins, and slip sheets can realize savings after just a few trips. Depending on the application and the handling situation, you may see as many as 50-60 trips per box. How much would 50 cardboard boxes cost you? Some products are designed to get more trips than that.
2. Environmental concerns, products that would traditionally be thrown away are now being re-used. Pallets are a perfect example, slip sheets are less expensive, do not take up much space, and are re-usable where pallets are bulky and hard to dispose of. Returnable plastic pallets are also great. You may think that recycling corrugated boxes is the “green thing to do” but in most cases it creates more energy to recycle them than to produce new boxes, and you’re creating that situation for every trip you ship something.
3. Safety, many conveyor systems get clogged up with corrugated cardboard that has torn off traditional boxes creating a safety hazard. It also creates down time for your operation to correct the issue. Corrugated plastic is more durable and more resistant to tears. Many conveyor systems use our totes to place smaller items in to prevent damage.

Sustainable Materials

- Plastic Corrugated (PP or HDPE)
- Closed-cell PE foam (HDPE)
- Solid Plastic (HDPE)
- Other materials available upon request

Reusable plastic box

Slip sheets save trees

Conveyor totes protect packages

Products Produced

L-SI converts these materials to create reusable plastic products such as:

- Plastic corrugated totes & trays
- Plastic corrugated boxes & bins
- Plastic corrugated recycle bins
- Collapsible utility carts
- Plastic slip sheets
- Plastic layer pads
- Plastic divider sets
- Plastic pallet caps
- Protective wraps

L-S Industries celebrates almost 50 years of expertise in converting, laminating, and packaging manufacturing. It is our vision to be a leader in packaging manufacturing by providing innovation. We strive to provide excellent service and timely delivery for our customers. While the packaging we provide is not your final product, we realize it is critical to your business and we treat it as such. The dedicated employees at L-S Industries are focused on customer service and creating a business partnership with our customers to deliver optimum value.

L-S Industries believes in recyclable packaging products to help limit the impact on our environment. We recycle all available scrap in our facility, and we encourage our customers to recycle the materials we sell them as well.
