

## Pre-Active Stage: Anticipating the Inevitable

01

decreased  
appetite

02

fatigue

03

changes in  
cognitive  
function

Now  
What?

open  
communication  
about the patient's  
wishes and goals  
for their end-of-  
life care

Hospice caregivers are trained in leading these discussions with the patient and families. If you see these signs, call your Doctor or us to discuss your options for care if necessary.
