Artwork Guidelines

- We ONLY accept .png images.
- Images should be saved with a transparent background.
- Images should be saved at 300dpi or greater at the actual print size.
- Avoid small details less than 0.2mm (0.5mm or greater preferred)
- Free floating lines should be at least 0.6pt (1.5pt or greater preferred)
- Create your design using CMYK colors
 - These will convert to RGB when saving to a .png file. However, less color shift will occur when printing. Colors will noticeably shift at print if designing in RGB colors.
- Transparencies and Fades:
 - As with all DTF these do not work well except when placed inside solid graphic area. Do not use these to fade to the shirt color as DTF prints with a white background anywhere there is print data.
 - You may want to research halftone screening to simulate a fade or transparency.
