HydraStat™

TECHNOLOGY

This technology is an innovative technique that manipulates the natural properties of ultra-pure water. It encapsulates small ingredient particles with an expanded surface area in a protective environment. It's engineered to enhance bioavailability and transfer into organic cells.

Bert Wonnacott,
CHIEF INNOVATION OFFICER

Encapsulation at the smallest scale.

Human supplement manufacturers have long sought more effective ways to maximize the nutritional impact of their products. Traditionally, many have compensated for low absorption rates by increasing the volume of raw ingredients, assuming that even if a significant portion is wasted, a higher dose ensures some benefits.

However, the true interaction between a supplement and the body occurs at the surface of each nutritional particle, where chemical and biological reactions occur. The most efficient approach isn't to increase the quantity of ingredients but to enhance their bioavailability by expanding this surface area interface.

The key to achieving this lies in optimizing particle size—expanding surface area without unnecessary waste—ensuring greater absorption and effectiveness.

We create ultra-small particle solutions by breaking down water-soluble ingredients to the molecular level for maximum effectiveness. Each ingredient is encapsulated within a protective shield of ultrapure water to maintain its optimal size and prevent clumping back into larger, less effective particles. This advanced process ensures superior stability, absorption, and bioavailability, delivering nutrients to the body in their most effective form.

Regular Cell Absorption

Hydrastat™ Technology

Glutathione

The most powerful antioxidant
you have never heard of.

Dr. Mehmet Oz
THE DR. OZ SHOW

Glutathione is the protector and detoxifier of the cell. It's the key to every human cell's life, health, performance, protection, and longevity.

High glutathione levels can improve health, enhance performance, speed up recovery, slow aging, increase energy, and extend life span.

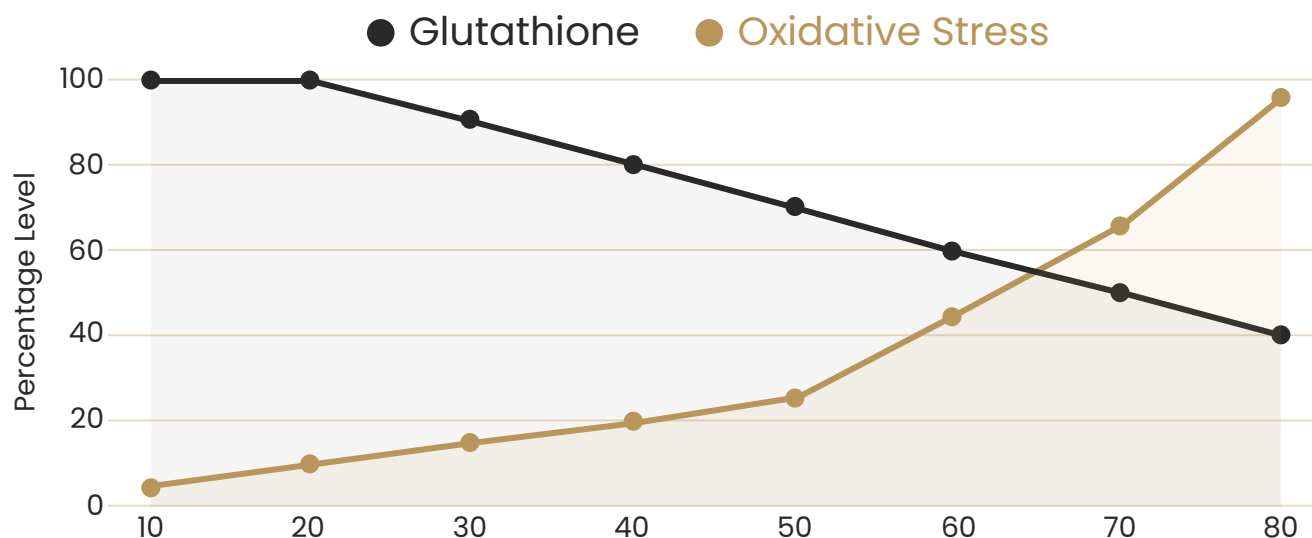

Your glutathione levels decrease the longer you are alive. Continuous attacks on your cells by the invasion of toxins, heavy metals, and exposure to radiation and free radicals cause damage and expedite the aging process. Glutathione levels are also reduced by any trauma the cells encounter - such as injuries, infections, or diseases.

Higher glutathione levels are associated with many health, performance, and anti-aging benefits. Most major diseases are associated with oxidative stress and low glutathione levels. Studies have shown that healthy people have higher levels of glutathione.

People with higher glutathione levels may experience:

- Decreased inflammation
- Reduced joint discomfort
- Strengthened immune system
- Increased energy
- Enhanced stamina and endurance
- Improved exercise recovery times
- Greater mental clarity and focus
- Improved sleep
- Enhanced quality and length of life

Although glutathione may be unheard of by the general public, it is well-known to the medical and scientific community. In fact, there are twice as many scientific studies on glutathione recorded in PubMed, the online medical science library of the U.S. Government, as there are on Vitamin C. Throughout the past two decades, there have been tens of thousands of studies on glutathione and its association with health and longevity.

Glutathione

It's one of the keys to fighting off the diseases you fear the most.
It's called glutathione. Now write it down because it's critically important.

Dr. Mehmet Oz
THE DR. OZ SHOW

A Higher Glutathione Level:

- ✓ Improves Immune Response
- ✓ Reduces Physical and Mental Fatigue
- ✓ Enhances Mental and Physical Performance
- ✓ Accelerates Physical and Mental Recovery from Exercise
- ✓ Increases Longevity
- ✓ Reduces Oxidative Stress
- ✓ Reduces Intercellular Inflammation
- ✓ Combats Accelerated Aging
- ✓ Delays the Onset of Diseases of Aging
- ✓ Removes Chemical toxins from Cells
- ✓ Critical for Oxygen Transfer

If you're chronically run down; if you're chronically fatigued; if your body just isn't firing on all Cylinders, low glutathione may be part of it, both cause and effect.

Dr. David Katz
DIRECTOR OF YALE UNIVERSITY'S PREVENTION RESEARCH CENTER

PrimaSkin

Key Ingredients

Glutathione

Glutathione is the body's master antioxidant that can neutralize free radicals, and may help restore your skin to its most healthy color.

Curcumin

Curcumin acts as an antioxidant, and may dry out blemishes smooth skin texture.

Collagen

Collagen, also known as "the fountain of youth," assists with elasticity, moisturizing, and reducing the appearance of fine lines and wrinkles.

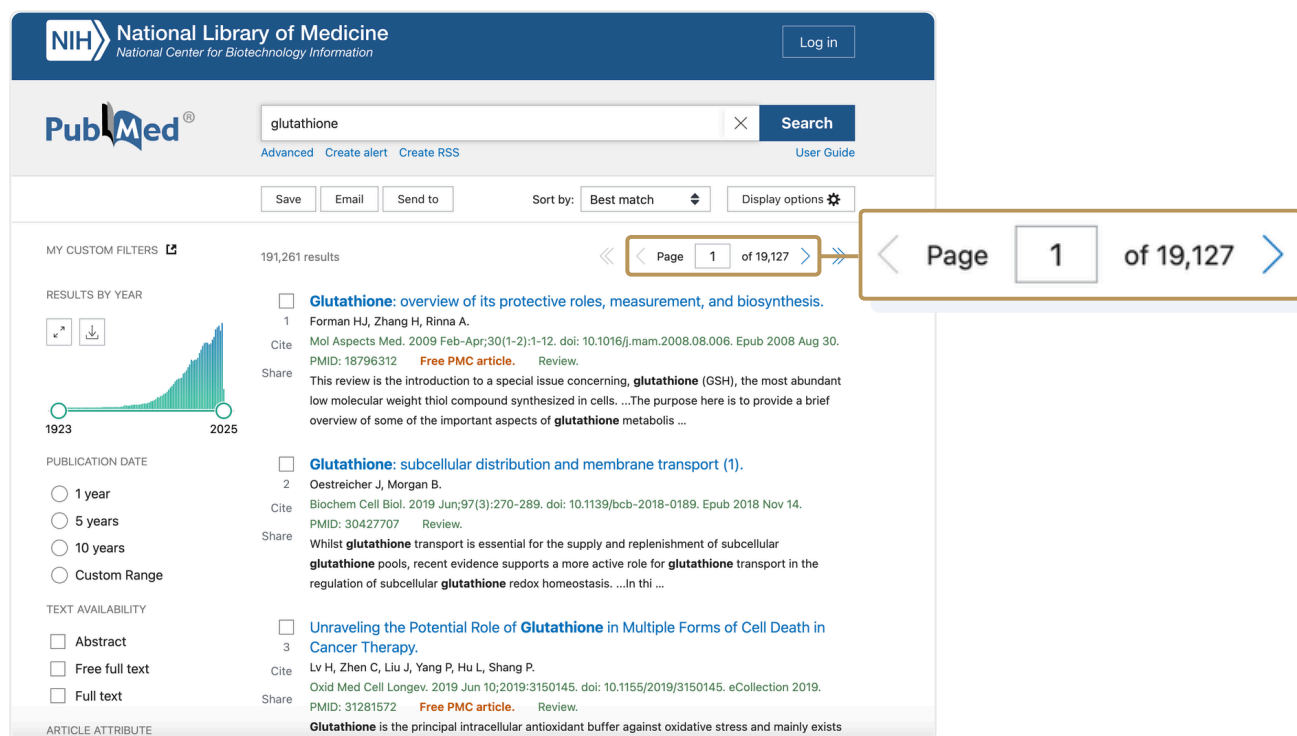

Hyaluronic Acid

Hyaluronic Acid can hold up to 1000x its weight in water, making it the secret ingredient for assisting with ultra-hydrated skin.

PrimaSkin has solved the #1 problem in skin care, the problem of absorption. PrimaSkin has HydraStat™ treated the best skin ingredients available to provide a simple solution to aging/dull skin.

Conclusion

Glutathione is the body's master antioxidant and has been linked to improved health, enhanced performance, quicker recovery, slowed aging, increased energy, and extended life span.

Glutathione levels decrease as people age. Most major diseases are associated with oxidative stress and low glutathione levels.

Glutathione is fragile and difficult to absorb, so the daily supplement industry has not tapped its potential. At Neumi, we use Hydrastat™ technology to create a daily supplement that your body can absorb.

Hydrastat™ technology manipulates the natural properties of ultra-pure water to provide unique water cluster protection of small-sized particles designed to increase their bioavailability and transference into the organic cell.
