

## President's Message

May 5, 2019

Hi gang!

Hi gang!

In regards to disc carriers and discs, see picture below. **Carrier 007** which will be stored on the top shelf behind scoreboard #7 contains a new design of disc. They have a factory bevel which makes them all identical.

I would like our membership to try these out. So when we have open play if you are curious, go get them and substitute them for the regular discs. Just be sure to not get them mixed up with the other discs and please put them back behind scoreboard #7 so we always know where they are.

These discs had mixed reviews down south, but my opinion is they play nicely in our indoor situation and with the wax we use. I feel they are consistent because the bevel on each disc is identical as they come out of a mold. Previously a worker had to grind this bevel on. No worker could make them identical. Maybe close but not identical. For those who don't know when I talk about a bevel, it is the angle you see at the outer edge of the disc which allows the disc to travel over the court, without snowplowing the wax.

I'll be looking forward to your feedback.

Thanks, Charlie.
