

Scale and Corrosion Inhibitor

Smart Release Technology provides scale and corrosion inhibitor packages for use in water processing equipment. This solid technology controls the release of chemicals through osmotic pressure and a proprietary polymer coating. The delivery mechanism provides the release of chemicals over a specified time period to deliver reliable treatments without the need for chemical pumps or close monitoring and eliminates the carrying of heavy liquid drums.

simple

Water in. Water out.

- Consistent release of product
- No need for chemical pumps
- Less monitoring

safe

Non-hazardous tablets are friendly for the environment and your employees.

- No handling of liquid chemicals
- No need for spill containment
- No drum or pail disposal

reliable

When water is flowing, product is releasing.

- No feed pump failures to interrupt chemical release
- Proprietary polymer coating produces consistent release
- Reduced operator involvement

Smart Release Technology benefits the environment. Learn how you can earn LEED points due to energy efficiency, pollution reduction, and water benefits.
