# WIZARD

## SPECIFICATIONS

AC Harmonic Resonator / Power Conditioner

Completely parallel

Proprietary harmonic pulse resonance technology

EMI Line Filter

Furutech style gold plated AC IEC inlet

Furutech style gold plated AC duplex receptacle

Resonator activity LED indicator

Black anodized aluminum chassis

Graphene connections

Micro-controlled digital amplifier

Black anodized aluminum finish

Graphene treated wired connections

Weight: 3 lbs. (1.4kg)

Dimensions: 17.0" (431mm) x 11.0" (280mm) x 2.0" (51mm)

Electrical: 110/220 VAC 50/60 Hz

Load: < 100mA or 10 watts

Rack mount (optional)

# ADD means Algorithm Digital Defined Power

ADD-Powr™ adds energy to the performance of audio/video components.  
It creates a new reference for electrical signals and systems.

## WIZARD

Congratulations on your purchase of the Wizard ADD-Powr AC harmonic resonator line conditioner.

We are confident that you will derive many years of satisfaction with in your audio / video system. This technology was developed to enhance the performance of each system component. The product may add as much as .5 to 1.0 dB or more of electrical and acoustical energy to the system.

The Wizard requires a standard IEC power cord (not provided). Power “on” status is indicated by an illuminated rear panel LED. The LED may blink momentarily. This indicates normal operation. A sequential algorithmic program is performed approximately once a minute. A completed cycle extinguishes the LED. Virtually no current is drawn. It is protected by a 250 milli-ampere fuse. Wizard is shipped pre-adjusted for optimal performance.

Wizard changes the quality of the AC line from the entry point at the circuit breaker box of the home or commercial space. It does not employ filters, isolation transformers, line regenerators, or balanced power techniques. Instead, proprietary digital amplifier circuitry under microprocessor (algorithm) control. The AC line becomes “re-referenced” or re-clocked with low frequency harmonics that neutralize noise and hash.

Wizard can be located in proximity to a/v system components, preferably on rack shelves 3 – 5’ above the floor.

The unit works upon power up.

There is no recommended burn-in time period. However, in most installations, full benefits are apparent after 1 hour.
