Ray Scott aka 'Tankless Guru',

Congratulations Ray!!

The article about your business was published on the Rheem Morning Bulletin (article attached).

Thank you for being such a strong Rheem Tankless Advocate!

February 27, 2023

## THE MONDAY MORNING BULLETIN

### This Month's Highlights

- [New Product Alert](#)
- [Enhancing ProPlumber Support](#)
- [Commercial Water to Represent Rheem in San Antonio](#)
- [Partner Spotlight: Ray Scott AKA the "Tankless Guru"](#)

## RHEEM MANUFACTURING FOR PUBLICATION

### TanklessGuru.com Has Solved The Bad Tankless Water Heater Installation Problem

*Their system saves time, money and no tankless knowledge is needed for a safe install.*

**Prosper, Texas (January 20, 2023)** – With consumer interest growing in sustainable home energy solutions, tankless water heaters have exploded in popularity. Unfortunately, many plumbers lack the knowledge of how to install or diagnose a problem with a tankless water heater, resulting in an unsafe, expensive, and time-consuming installation. TanklessGuru.com, an expert in tankless water heater installations for more than 15 years, has developed a solution to that challenge.

TanklessGuru.com is the only company in the United States that preassembles all the needed components for a safe and successful tankless installation. TanklessGuru.com delivers the **TG PRE-ASSEMBLY SYSTEM** to the homeowner, ready for a plumber to mount in an attic or garage. Then, the TanklessGuru.com **TG PRE-ASSEMBLY SYSTEM** only requires the installer to complete five simple connections, thus removing the primary risks of improper and unsafe installations that work every time.

Using Rheem's advanced RTGH 95 DVLN-2 tankless water heater unit which is mounted onto oil finished plywood backer board, along with an additional 21 components makes-up a completed assembly.

All assemblies are completed, in their production facility in Prosper Texas, using quintessential manufacturing assembly methods with an extensive inspection process prior to delivery.

Founder and design engineer Ray Scott created the **TG PRE-ASSEMBLY SYSTEM** to eliminate the preventable problems that come with most tankless installations. With more than 15 years in the industry installing tankless water heaters, he saw how easily installations can go wrong, creating a potential safety hazard for the homeowner.

“A growing nationwide problem is that most plumbers have very little knowledge of how a tankless water heater operates or how to properly install one,” Scott explains. “A field assembly installation usually involves the plumber purchasing some components or finding parts, that may work, in their truck and then assembling them at the customer's home. Then making several runs to the Home Depot for more parts. This process can take an average of 8 to 10 hours, with the potential of making many mistakes and then not knowing how to diagnose a problem, they just created. By having the correct components preassembled in a quality controlled manufacturing environment, most field assembly mistakes are eliminated.”

Scott says the **TG PRE-ASSEMBLY SYSTEM** typically takes 3 hours to install, once the tanks are removed, and can save a homeowner between \$1,500 to \$2,000 in costs. And, most importantly, it vastly reduces the risk of improper – and unsafe – installs.

## FOR PUBLICATION

The **TG PRE-ASSEMBLY SYSTEM** includes high quality components, designed to last, like the Rheem tankless water heaters and Culligan water filter. TanklessGuru.com offers an unprecedented 5-year parts and labor warranty on its **TG PRE-ASSEMBLY SYSTEM**.

“Over the years we’ve installed more than 2,500 tankless water heaters. Once I developed this system, the last 350 proof of concept installs were very successful,” Scott adds. “It’s very satisfying to know that we’ve been able to make a significant improvement to this industry that will benefit everyone involved.”

TanklessGuru.com wants to take the **TG PRE-ASSEMBLY SYSTEM** nationwide and is currently looking for partners or investors.
