

How to Identify California or 49 State Model Carbs

Thanks for purchasing our products.

You can download installation instructions from our website main page under "Document Downloads." The link is at the end of this document.

For the Desmog kit download the following files:

1. Desmog Kit Description (I added some helpful installation tips to this doc)
2. Desmog from VRCC Shoptalk

IF your bike is a California model, download these also:

1. California Model Valkyrie Desmog

How to tell if your bike is a California or 49 state model. It doesn't matter where you live. California bikes have been scattered across the world since production.

Look at the back of the number 6 carb. It is the one on the left, beside the fuel selector knob. If there is a tube it is a California model. (picture on right)

49 State Model

California Model

California model has brass tubes on each carb. There is a total of 7 of them as the #3 carb has 2.

The kit does not have the extra caps. I have put screws in the tube ends. The referred to articles also give other methods.

Red Eye Technical Services Valkyrie Parts sells a nice "California Model Evap Cap Kit" for \$10, that has the 7 caps in Viton.

I have no affiliation with Red Eye. I just like his parts.
