

BASKET CONVEYOR DISHWASHERS

Efficiency, productivity and speed equals great results

Angelo Po presents its range of basket conveyor dishwashers: excellent performance, quality materials and high-level construction solutions to meet the most challenging needs of the catering industry.

The basket conveyor dishwashers are made of AISI 304 stainless steel with a double wall spaced by a 10 mm air gap which ensures less thermal and acoustic dispersion in the environment, maximizes the effectiveness of the installed power and optimizes water and detergent consumption.

The range consists of single and triple rinse models, with corner versions, completed with straight or corner drying modules, steam extraction, heat recovery units as well as a wide choice of sorting tables and roller conveyors (straight or curved) to create efficient washing boxes that meet the customer's needs.

TE SERIES

BASKET CONVEYOR DISHWASHER

Spaced double wall:
-60% thermal dispersion

Control panel with
soft-touch keys and LED
display

Double flow washing
pump: 25% more
effective

Flexibility: from 60 to
320 baskets / h, for
various objects

Reduced operating costs:
starting from 0.8 liters
of water per basket and
optimized installed power

TE

For great results

- Control panel with LED display, soft-touch keys and electronic board
- Construction in stainless steel with double wall spaced by a gap of 10 mm
- Insulated and counterbalanced double-skinned doors for each module
- Fully pressed tanks made of AISI 304 stainless steel
- Integral filters in AISI 304 stainless steel on the tanks
- Useful height of entry / exit: 45 cm
- Useful width of entry / exit: 54 cm
- Stainless steel washing arms with 12 nozzles each
- Double flow washing pump, efficient consumption and silent
- Rinse pump and break tank to ensure constant performance and reduce water consumption (except TE120-TE210 models)
- **Optimization of energy consumption:**
 - during stand-by periods, unnecessary electrical connections are switched off; the machine resumes the washing program when the basket is inserted
 - the electricity consumption adapts to the dragging speed of the baskets

- rinsing stops when no basket is present, avoiding water, energy and cleaning product waste
- water consumption is variable according to the basket speed
- Models with triple rinse: the water from the final rinse is partly used for the pre-rinse and partly for a rinse in the washing area
- Model TE120D / S: reversible on site
- Basket dragging system with double side rail guide, central area of the basket completely free for the water flow
- Accessories: basket stopper microswitch, in-line or corner drying unit, steam suction unit, heat recovery unit, heat pump, as well as tables and roller conveyors to make a complete washing box.

Optimum washing results, the long life of all components and minimal consumption of detergents and surfactants are ensured if the dishwashers are fed with hot water with hardness of 2-8°F and pressure of 200-400 kPa.

TE SERIES CONFIGURATIONS

TE SERIES CONTROL PANEL

- The SOFT-TOUCH keys with LED display can also be used with gloves on.
- On / off button.
- Tank and boiler temperature display / adjustment.
- Set temperature reached light.
- Washing program start button.
- Tank filling light.
- Basket feed speed selection.
- Stopper micro switch light.
