We remind you that practicing mountain bike sports requires the use of appropriate protections before each use.

These protections must be approved and CE certified. It is therefore necessary to use a helmet, boots, back protection as well as knee and elbow pads.

Textile products such as pants, jerseys, jackets, gloves are complementary products for comfort in practicing this sport and cannot be considered in any case as personal protective equipment.

The protections must be worn each time they are used and must be correctly adjusted. In the case of use by a child, ensure that an adult ensures that these safety instructions are respected. We remind you that this equipment is intended solely for off-road use and cannot be used for road use.

KENNY

RACING

Since 1981, at KENNY Equipment, we have been committed to preserving the expertise of «Made in France.» The design and development of our collections are entirely carried out in the heart of our design studio in Amiens, in northern France.

Our production unit, located near our creative studio, is capable of producing prototypes, creating original prints on textiles, and manufacturing various items for motorcycles and bicycles.

The members of our team are first and foremost passionate practitioners of the disciplines for which they develop new products. Whether it's motorcycling, quad biking, or cycling, they know the characteristics expected in each discipline, both as enthusiasts and as competitors.

Our riders also actively contribute to the improvement of our products. From their competition experiences, where they push our

products to the limit, we draw valuable lessons and innovations. Our premium ranges are the perfect illustration of this.

For our riders and for you, Kenny is committed to meeting the demands of the disciplines in which we invest our products, through uncompromising quality.

CUSTOM

CUSTOM OFFICE

Give your customers the opportunity to personalize their jerseys with KENNY's expertise, backed by over 40 years of experience!

Whether an amateur or a professional rider, our motocross jerseys can be fully customized according to their preferences.

You can choose from a wide range of colors, patterns, and graphics. Add a name, surname, race number, or even personal logos to create a jersey that truly represents them on the track.

Thanks to the expertise of our graphic designers, you can get 100% personalized prints. Submit your design request to our customization service.

Here are some examples of our new 2025 custom designs, available upon request..

PERFORMANCE

HELMET

Thanks to its ERT® specification and numerous technical innovations, this new **performance** helmet guarantees optimal safety.

Made from soft, highly ventilated polymer foam. For a perfect fit and heat regulation. ERT® also enhances comfort.

Higher level of safety. Reduction of linear and oblique impacts.

The ERT® system is integrated between the EPS and the inner lining of the helmet.

The patented **ERT®** (Energy Reduction Technology) is the latest advancement in helmet protection, consisting of a ventilated layer of soft polymer located between the shell and the inner lining of the helmet.

Providing enhanced protection against both linear and oblique impacts, this revolutionary material delivers exceptional shock absorption performance.

The combination of the EPS shell and **ERT®** ensures reinforced safety.

Due to its nature, **ERT®** is the most breathable technology on the market and also offers additional comfort.

PERFORMANCE

The **PERFORMANCE** helmet is likely the standout of the 2024/2025 season for full-face helmets. It offers an unparalleled level of protection, comfort, and style in its price range. Certified ECE 2206 and equipped with the latest **ERT®** (Energy Reduction Technology), it represents a true blend of technical expertise and effectiveness.

NEW

DECADE

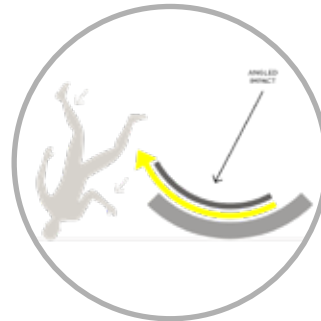

CASQUE

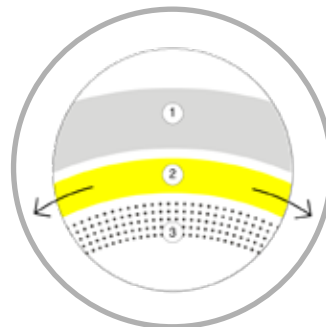

Ce casque **DECADE** est équipé du système de sécurité Mips®, qui permet d'absorber l'énergie de l'impact en faisant glisser la tête le long de la calotte.

Mips

Safety for helmets

La couche à faible coefficient de frottement peut réduire la force rotationnelle des chocs obliques.

Le système **Mips®** imite le système de protection du cerveau lui-même, pour une protection contre le mouvement rotationnel.

- 1- Casque
- 2- Système Mips®
- 3- Calotin EPS

Le cerveau est généralement plus sensible au mouvement de rotation qu'au mouvement linéaire car il possède des propriétés de cisaillement similaires à celles de l'eau ou du gel. Lorsque différentes parties du cerveau bougent les unes par rapport aux autres en raison d'un mouvement de rotation, les tissus peuvent s'étirer, ce qui peut provoquer des commotions cérébrales ou d'autres lésions cérébrales.

Le mouvement de rotation est une cause fréquente de commotions cérébrales et de lésions cérébrales plus graves lors de coups obliques à la tête. Le système de sécurité **Mips®** consiste en une couche à faible friction, montée à l'intérieur du casque. En cas d'accident, la couche à faible friction est conçue pour se déplacer légèrement à l'intérieur du casque, pour aider à rediriger les forces de l'impact, loin de la tête. Ceci vise à aider à réduire le risque de lésion cérébrale.

DECADE

The **DECADE** helmet is the most versatile full-face helmet available. It offers an unparalleled level of protection, comfort, and style in the market. Equipped with the **Mips®** safety system, it absorbs impact energy by allowing the head to slide along the shell.

**NEW**

- Shell made from injected plastic
- Equipped with 14 ventilation points for improved airflow
- MIPS technology to absorb impact energy by allowing the head to slide along the shell

The interior padding is attached around the rotational SAS (Shock Absorption Suspension) system. They can be removed by gently pulling the padding away from the suction cups. Reverse the process to reattach the padding to the system.

ROCKET

The **ROCKET** helmet is immediately distinguished by its exceptional comfort and remarkable ventilation. Whether you're into trail, all-mountain, or enduro, this helmet is simply the ideal choice for mountain biking. Despite its lightweight design, it features **SAS technology**, providing optimal protection while remaining comfortable and light.

- Helmet for mountain biking and Enduro
- High level of protection with its enveloping shell and SAS system
- SAS (Shock Absorption Suspension) technology for effective shock absorption
- Equipped with 8 rotational points
- Removable interior padding for easy cleaning
- 12 ventilation holes for optimal airflow
- Easy helmet closure and opening with Fidlock® magnetic buckle
- Occipital adjustment for a better fit
- Removable visor

Prolight

Stretch

Slim fit

Réspirant

The **PROLIGHT** jersey is the most technical model in our collection.

Designed with high-performance fabrics, it combines stretch and microfresh materials for optimal freedom of movement and superior ventilation. It is ideal for wearing in high temperatures.

Its slim-fit cut provides an aerodynamic look while ensuring exceptional comfort, even during the most demanding efforts.

BACK FABRIC
BRASIL

• Scratch resistance

• Pilling resistance

• Structured mesh

• Highly breathable

FRONT & SLEEVE FABRIC
RUSKY

• Scratch resistance

• Pilling resistance

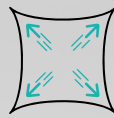

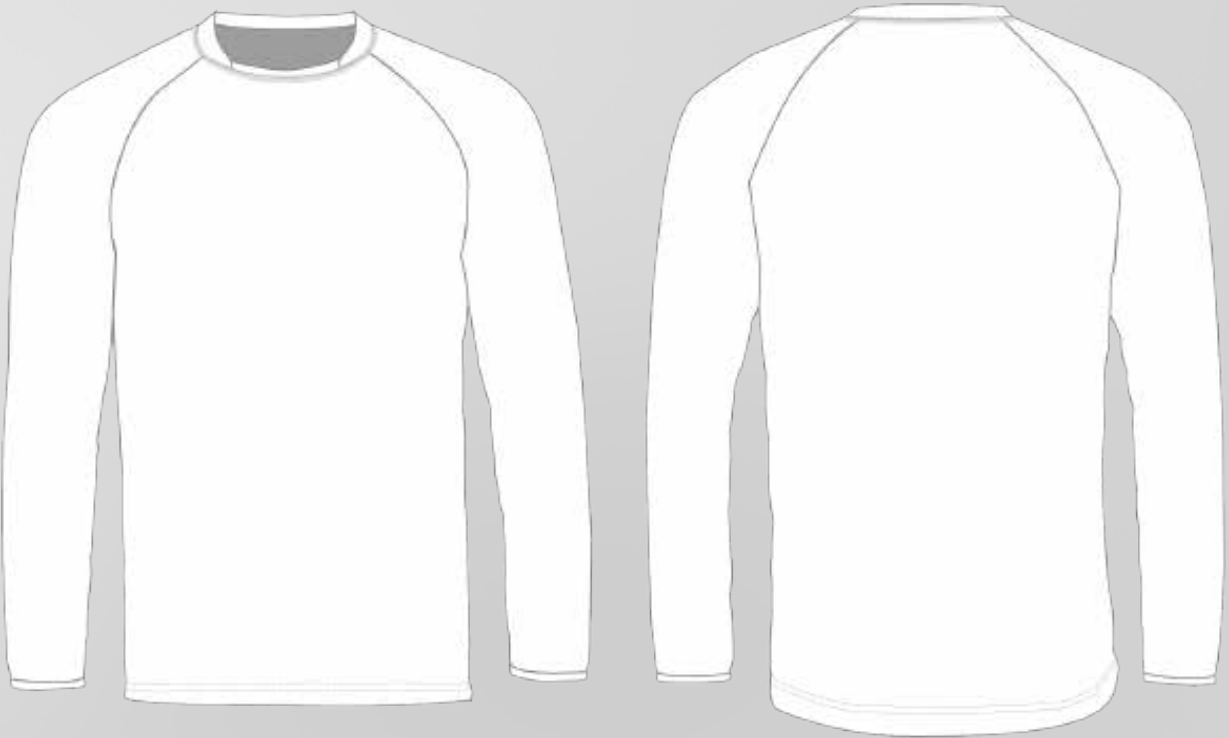

• protection UV 50+

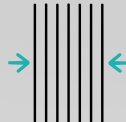

• Quick-drying

ELITE

Stretch

Regular

Résistant

Our **ELITE** jersey features a regular cut, which is looser and more relaxed compared to the **PROLIGHT**. Its regular or straight cut gives it a more classic style, and it does not compress your body, allowing for natural ventilation during exertion.

It also allows for wearing a protective vest or chest protector underneath while ensuring freedom of movement.

FRONT, BACK & SLEEVE FABRIC
LESACA

• Scratch resistance

• Pilling resistance

• interlock

• lisse

Prolight

DryClim

Confort

Résistant

Stretch

Slim fit

This jersey is particularly technical, designed for mountain biking or BMX. With its slim-fit design, it is very close to the body and creates no wind resistance. The jersey is very lightweight, stretchy for perfect movement freedom, and well-ventilated for optimal comfort during exertion. Its microfresh treatment provides comfort in warm weather conditions.

MAILLOT

SIZE:
PP TTC

S>2XL
49€⁹⁵

- Slim fit straight cut
- High-tech stretch and microfresh fabric assembly on the back
- Lycra at the collar and cuffs
- 100% polyester
- Permanent sublimation printing
- Hem finish
- Lycra cuffs
- Lycra insert at the collar
- Hem finish

****NOTE:**** Due to its cut, you may need to size up (sometimes by 1 or even 2 sizes) compared to your usual references and other jerseys in the KENNY range.

An ultra-light, ultra-flexible pant that will satisfy even the top mountain bike and BMX riders. Our athletes tested it for 2 years and endorsed it. It is the most technical pant in our range.

UP

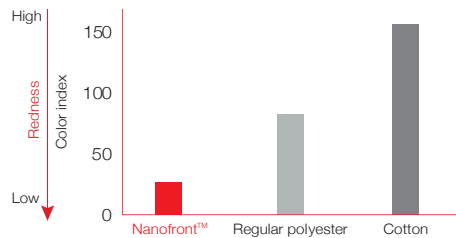

With their special **Nanofront®** nanofiber and multitude of technical innovations, the new **PERFORMANCE** gloves deliver the best grip possible.

NANOFRONT

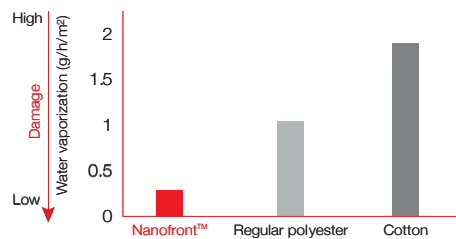

Unrivalled grip strength, even in wet conditions.

Changes in the hue of the skin
(Measured using Mexameter™ M X18)
When the skin is damaged, it turns red as hemoglobin floods the blood vessels.

Indisputable comfort, soft to the touch, slim fit. Minimise damage from abrasion.

Changes in water vaporization through the skin
(Measured using Tewameter™ TM300)
Removing the corneous tissue on the skin increases water vaporization from inside the skin.

The fibre quickly absorbs and distributes sweat, while also preventing the body temperature from rising.

This feature is inspired by biomimicry: the mechanism copies the densely packed hairs on a gecko's feet.

By weaving our ultra-fine **Nanofront®** fibre into a fabric with a fine, dense structure, the surface density increases tenfold compared with other fibres. This creates an uneven surface on a nanometric scale and generates a high frictional force.

What's more, this force is maintained even when the glove is wet with rain or sweat. Usually, moisture forms a layer between surfaces, preventing friction and causing slippage. **Nanofront®** absorbs moisture, however, and the frictional force is maintained. **Nanofront®** can therefore play a big part in user performance, in any environment.

UP

Our **UP** gloves are a very lightweight model, designed for montaine bike and bmx competitions. They are very thin and deliver unrivalled grip strength on the controls thanks to the use of **Nanofront®** technology.

PROTECTIONS **.25**

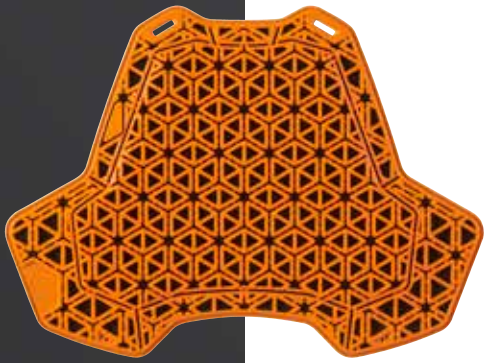

PERFORMANCE

PROTECTION GEAR

Featuring D30® technology, the new **PERFORMANCE** chest protector offers an extra layer of protection against injury caused by impacts. This is our lightest, toughest and most effective stone shield.

D30[®] Protected

A unique design: engineered to ensure optimum safety.

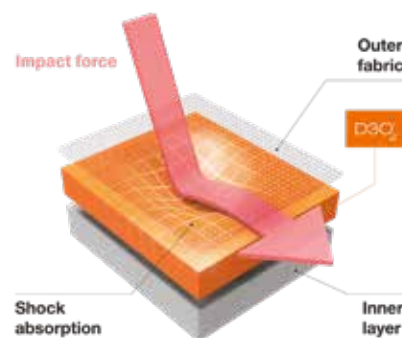

Ultra-thin: suits all body types.

Flexible: moves with you without getting in your way.

How does it work?

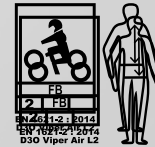

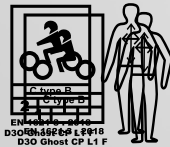

D30[®] technology hardens upon impact and dissipates the energy received in the event of a shock, dramatically reducing the strength of the force transmitted to your body. **D30[®]** delivers the thinnest and most advanced impact protection you can buy.

PERFORMANCE

The new **PERFORMANCE** chest protector is far more than your average stone shield. It has an EN 1621-3 level 2 protector for your chest and an EN 1621-2 level 2 protector for your back: one of the highest levels of protection on the market. In addition to being very lightweight thanks to its next-gen D30® protectors, it is breathable and fully adjustable, keeping you as comfortable as possible.

This high-tech and extremely ergonomic protection gear has been designed for the most demanding riders.

PERFORMANCE
SIZES:

PROTECTOR
XL/2XL
251-1901011

- Ergonomic articulated construction for plenty of freedom
- Injected-plastic structure, highly ventilated at the front
- D30® Viper Air next-generation back protector, certified EN 1621-2 level 2, very lightweight and ultra ventilated
- D30® Ghost™ next-generation chest protector, certified EN 1621-3 level 1, teamed up with an injected protector to reach level 2
- Adjustable height and width
- Can be worn over or under your jersey
- Buckle closures
- FFM certified

HOLESHOT

A direct descendant of its big brother, the **PERFORMANCE** model, the **HOLESHOT** chest protector has an EN 1621-2 level 2 back protector from D30® – the latest model – and an injected stone shield-type chest protector certified EN 14021. Extremely lightweight and ventilated, this protection gear can be fully adjusted in height and width so it fits you like a glove and keeps you comfortable.

TRACK

TRACK goggles are delivered with an injection-moulded lens as standard.
They offer an improved field of vision, greater resistance to distortion, and protection from debris.
They fit all helmets and are comfortable to wear.
