

SciTOX Instructions

The following are the instructions for use for when you receive the detox system.

Our products could be called 'Overkill' because they are made to work for most every situation. If you're a daily user you'll want to follow the instructions carefully and max out the number of washes and time left in. If you're a light user you can probably skip some washes, shorten the times and not follow the directions to the letter. Most people will be somewhere in between.

Read the full instructions carefully. We suggest making notes on anything you might have a question about as well as important points and see if you have any questions before you begin. If you have questions please send all of them in a single text message if possible.

Our hours are 11-7 Monday through Friday and 1-5 on Saturday We are closed on Sunday. We might respond outside of these hours sometimes, but not always. Thanks for understanding.

1. Before you start

1.1 What you need:

- Latex or plastic gloves
- Disposable shower caps
- Eye protection of sorts
- A permanent dye that is closest to or one shade darker than your natural color

You can find these at Sally Beauty Supply or most grocery stores.

Suggested:

- Blow dryer
- Vaseline for skin protection
- Comb
- Cotton headband to prevent dripping into eye
- Towels (CLEAN, new if possible) (Paper Towels would be okay also)
- Apple cider vinegar (to restore your hair pH after series of washes at end of day after washing)
- A keratin product or two like a shampoo, Conditioner,
- leave in spray, or keratin hair mask (recommended)

1.2 What you need to know about the product

SciTOX Detox Rapid Detox Systems can be harsh on hair for some people and has the potential to cause temporary structural and textural changes in hair as a result of the processes used to strip metabolites from their keratin and melanin attachments.

Many people can't tell a significant difference before and after but some customers feel a mild dryness or other mild difference in the way their hair feels. Some people equate a textural difference with hair health but its only temporary and generally normalizes by the 30 day mark.

If having perfect hair health is more important than having the fastest, most effective detox on the market, in the future if you have more time you can choose one of our NEW much less harsh but more gradual detox systems, that is still faster and more effective than any other system. You can also purchase this new system to maintain low levels over time.

Our detox systems are constantly improving and our product offerings are expanding. Today our system is more advanced and less harsh than it was 6 months ago and in 6 months we will have a faster, more effective version than we have today.

We have a LowTOX system for lower levels, that works in just a couple hours and doesn't require the customized bleach step.

Plus we are putting all of our highly effective, individualized 3 day, Rapid and Permanent urine detoxes back online.

On top of that we have a revolutionary Nail Detox System and saliva / oral fluid cleanses that are going through the same strenuous testing and development process that our hair systems did. We are selling the Nail Detox to certain people as its showing good results.

1.3 Various tips about the product

1.3.1 IMPORTANT - TO MINIMIZE STRAIN ON HAIR:

Separate the bleach step from Steps 6 and 7, and subsequent steps 6 and 7 from each other as much as possible in your given time frame.

Also, stick to the suggested hair bleach and treatment times per hair health level.

If you do this, you're even less likely to notice any lasting hair health effects. After a couple weeks, everything will be back to normal.

****If completing the entire system in a few hours, you should spread out Step 4 from Step 6 as much as possible, doing Bleaching much earlier in the treatment process, after the first round of 123. You must pay very close attention to you hair during 6 and 7 and as a female with color treated or other damaged hair you need to be aware that this carries a significant risk with it and it is possible that you could, in worst case, lose hair. You might want to consider using a basic 20 volume developer instead of what is included.****

To help restore your hair and minimize any lasting issues read the recommended Step 9 and **RESTORE YOUR HAIR AFTER SYSTEM** below.

1.3.2 CAUTIONS when using

Be cautious when opening each of the bottles. In some cases they build up pressure during transit and can spray aggressively or burst when opening.

Avoid contact of all chemicals with eyes (if you do get some in your eyes flush with water and seek medical attention if necessary.)

Wear latex gloves when handling all products. Use a new pair for each product.

Do not mix wash 1 and wash 3 in any shape or form it could hurt certain parts of your skin for a couple hours.

Keep in mind these are aggressive chemicals generally not available for purchase to the general public that do their job well, but handle them with extreme care.

1.3.3 IMPORTANT TIPS FOR USING THE SYSTEM

Focus the most effort and product on the hair closest to the scalp, the top 3 inches of hair for steps 1-3, unless you know that they will be submitting longer than 1.5 inches or "90 day" supposed specimen. If they will be submitting the top 3 inches or "6 months" supposed specimen then focus on the top 4-5 inches of hair.

Also, focus most of the effort on the back of the head from around the ears and over and from the crown of the head to the neck. This is where they will clip the sample from 98% of the time.

If step 3 causes irritation, add small amounts of water to your hair to dilute it if necessary. Or dilute Step 3 with conditioner or lotion. (Not suggested for heavy amphetamine, cocaine or THC usage). Many people have success calming irritation by using apple cider vinegar to normalize the pH and rinsing in a cold shower. Or clear aloe gel and keratin products have been said to help.

It's not recommended to apply Step 3 if you have cuts, rashes or burns on your scalp. Steps 1-3 could cause irritation or discomfort. Discontinue if you need to.

Step 3 can also cause different degrees of hair lightening for different people. From unnoticeable to significant. If you are using a nonbleach system and wish to maintain your current hair color then you can shorten the duration of the rounds of Step 3 but increase the repetitions. I.e. from 30 minutes to 15 minutes and from 4 rounds to 8 rounds. For heavy users this is not recommended, however.

For step 5, permanent dye, you need a developer. If you have healthy hair choose a 30 to 40 volume developer for best results.

If your system includes 6/ 6.1, 6.2, &/or 6.3 and 7/7.1, 7.2, and/or 7.3 then make your last round of 6 & 7 be 6.3 and 7.3. Some packages may only have 6.1's or 6.2's and 7.1's or 7.2's or just 6 & 7, that's normal. Or might have 6, 7, 6.3 and 7.3.

In case labels come off or smear in transit, 6 is the clear pungent liquid and 7 is the cloudy more fresh smelling liquid.

1.3.4 Tips for preventing external contamination:

Make sure to use clean towels for each new wash or treatment because you will be rinsing out the metabolites down the drain and some onto the towel.

Also change your pillow cases after you begin using the system so as not to transfer the toxins from before to your newly clean hair. And change as often as often as possible after each step.

Do not use a hair brush, comb, or anything else that touched your hair when it was dirty before beginning the system. At minimum, wash it and bleach it.

If you wear hats, once you have started the treatment process, do not wear a hat that you wore before you used the detox. That is one of the top ways people reintroduce toxins to their hair.

1.3.5 Test Tips:

When you are at the test center having your hair collected, make sure they only submit 1.5 inches of hair if you are supposed to be getting a 90 day hair test. If they do not, make sure you take a video or picture to document it.

The lab will test whatever length is submitted. If it is 6 inches it will detect the previous year, 12 inches will show 2 years etc. Many collectors cut and submit a longer amount than they are supposed to, by mistake, because they think the lab will cut it but they won't. You want evidence on your side in case the results don't go your way because of this. If you have shorter hair consider cutting it down to as low as 1.5 inches (or contact us for a custom recommendation for your situation).

INSTRUCTIONS:

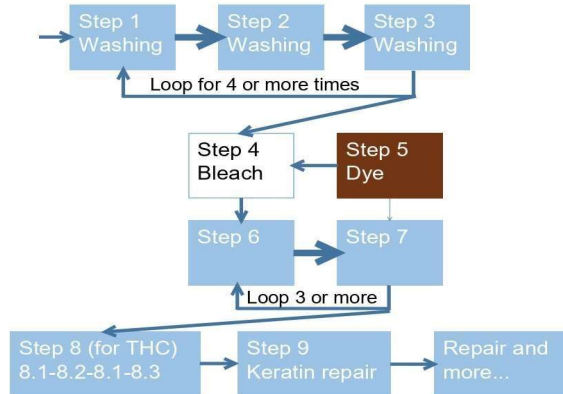

SEQUENCE OF STEPS: 123 123 123 123 123 (+) 4 5 67 67 67 67 67(+) and if applicable THC bonus 8.1 8.2 8.1 8.3 (discontinued for most) or other Bonus Steps (Green Liquid, light brown liquid, or clear liquid).

For Heavy THC use administer the entire system sequence above twice. i.e 123 123 123 123 45 67 67 67 67 and then 123 123 123 123 45 67 67 67 67 67. Repeat Steps 123 67 at least 4-5 times for normal use or up to many more for higher use.

The following is the simplified steps guide which should suffice for most people and in a few pages you can find the detailed (but much more complex) guide

2.1 SIMPLIFIED GUIDE:

Your steps are going to look like this, in this order, give or take. Usually at the minimum.

SIMPLIFIED STEPS

Step 1: Apply thoroughly to damp or dry hair, scrub for a couple minutes, let sit for 20 minutes. Add hot water and scrub your hair for 5 minutes, then rinse. (For heavy use dry hair with blow-dryer)

Step 2: Apply thoroughly to damp or dry hair, scrub for a minute or two, let sit for 20 minutes. Add hot water and scrub your hair for 5 minutes, then rinse.

Step 3: Apply to minimally damp or preferably dry hair for 30 minutes, scrub for a couple minutes, rinse with warm water. If using the non-bleach kit and wishing to minimize color change then shorten the length of time left in to 15 minutes but double the number of rounds. (Use with UV Light if you have it)

Then you will repeat 123 123 123 maybe 123 For a total of at least 4 or 5 times. (If you have any of steps 1,2 or 3 leftover, use them like shampoo over the remaining days with 5-10 minute rounds of scrubbing and rinse)

Step 4: Mix the entire contents of the two bottles of 4, the liquid with the powder, in a bowl. Apply until Level 8 or 9 is reached on a “bleach chart.”(GOOGLE IT) If hair is already blonde, leave in 15 minutes. (CAUTION: {Mainly for females with thin or treated hair: If using entire system in less than 24 hours you might want to swap out our developer for something less intense or shorten the time you leave the bleach in. Regardless, use EXTREME CAUTION IF APPLYING STEP 6 WITHIN HOURS OF BLEACH OR DYE.

Step 5: Buy a permanent ammonia-based dye and developer (30 or 40 volume (OR EVEN 50 IF VERY CAREFUL) and follow the directions. Leave in towards the longer end of directions (Seek Guidance w/ 50V) {Higher Volume and Longer Time Removes Greater Toxins – ONLY CONSIDER for HEAVY Toxins}

Step 6: Apply for 25 minutes (or the time for your recommended hair type) and then rinse. (complete Step 7 within an hour or so of rinsing Step 6) If using Step 6 several times you might want to decrease the time each round. For example for heavy use with healthy hair start with 25 minutes for the first round, 22 minutes Round 2, 20 minutes Round 3, 18 minutes Round 4, 15 minutes Round 5, 14 minutes Round 6. Step 7: Apply for 10-15 minutes and rinse. (Repeat 67)

Repeat Steps 123 6 & 7 at least 4-5 times for normal use or up to many more for higher use.

123 123 123 123 123(+ more) 4 5 67 67 67 67 (+ up to 3 more rounds) and if applicable THC bonus 8.1 8.2 8.1 8.3

For GreenOUT Ultra HeavyTOX do twice the above. I.e. 8-10 rounds of 123, 2 rounds of 4 and 5, 6-10 rounds of 6 and 7.

*Super Simple Instructions:

Apply Step 1 to dry or damp hair leave in for 20-30, scrub with hot water for 5 then rinse.

Same with step 2.

Step 3 apply for 30 then rinse.

Repeat 4-5 times. Or 7-8 for GreenOUT Long Hair/Ultra HeavyTOX OR any other long Hair/ Ultra HeavyTOX System.

Step 4 mix the 2 bottles powder and liquid and apply to hair until level 8 or 9 on bleach chart is reached. Then Rinse. (Google Bleach Chart)

Step 5 dye now or wait until done with 6s and 7s bc they will remove some dye. Or dye now AND at the end.

Step 6 apply for 15-20 minutes then rinse

Step 7 apply for 15-20 minutes then rinse. Repeat the regular 6 and 7s 3 rounds if you also have 6.2 & 7.2s or up to 5 rounds if you only have regular 6 and 7.

Then move on to Repeat 6.2 and 7.2 if you have them then 6.3 7.3 if you have them for a total of at least 4 or 5 times of the 6s and 7s for all kits except Long Hair/ Ultra HeavyTOX which you will repeat at least 6 to 8 times total of 6s and 7s.

For Green Bonus Step you can use anytime. Use at least 3 times. DO NOT USE IF BEING TESTED FOR ALCOHOL ETG. Apply and leave in for 30 minutes and no need to rinse but you can. Option to use Before Step 1, during steps 123 like after step 1 or two in the first or second round or ANY OTHER TIME. Use as last step day of test too if you want.

HOPEFULLY THIS IS SIMPLE ENOUGH FOR EVERYONE. AS LONG AS YOU GET ALL THE STEPS DONE THAT IS WHAT IS IMPORTANT. CALL OR TEXT WITH ANY QUESTIONS.

When to use the system?

Plenty of people have used the system the morning of the test and still passed but we highly recommend spacing it out over at least a few days if you have the time in order to give your hair and scalp a break.

In general, if you're not on a time crunch it's a pretty safe bet to use the system starting about a week before your test (Heavy THC Users with GreenOUT Ultra HeavyTOX Shoot for Longer). Here are two examples of how you can space it out if you have about a week:

Day 1: Steps 123, 1 (Green Bonus) 23

Day 2: 123, 123

Day 3: 123 4 (5? Dye Here and/or After Step 7)

Day 4: 67 67 (Or Skip a day and push this back to Day 5)

Day 5: 67 67 (One to Five 5 Minute Washes with any Leftover 1, 2 and/or 3. Just use like shampoo. Scrub with warm water for 5 minutes then rinse)

Day 6: 67 (Three more short washes with any leftover 1, 2 or 3) (5? Dye)

Day 7: TEST

OR

Day 1: (Green Bonus) 123 123

Day 2: 123 67

Day 3: 1 (Green Bonus) 23

Day 4: 4 5

Day 5: Five 5-10 Minute Rounds of Steps 123

Day 6: 67 67 123

Day 7: Short 123X2 67

Day 8: TEST

Two More Examples. The first is for 4 days and another for 7 days. For Heavy THC Use if you have a couple weeks to a month its ideal to use one whole system ASAP and one whole system the week before the test. They can look like either one of these two examples depending on if you want to space it over 4 days or 7 days. Feel free to add or subtract days and move things around within your comfort zone.

Another 4 Day Example:

Day 1: Steps 123, 123 (Green)

Day 2: Steps 123, 123, 4

Day 3: Steps 67, 67, 67 (Leftover 5 minute rounds of 123, 123, 123, 123, 123, 123) Day 4: Steps 67, 67, 5

Another 7 Day Example:

Day 1: 123 (Green) 4

Day 2: 123 123 123

Day 3: 67 67

Day 4: Five 5 Minute Rounds of 123

Day 5: 67 67 67

Day 6: Break

Day 7: 67 (Green) (Clear) 5

Day 8: TEST

For GreenOUT Long Hair/ Ultra HeavyTOX with only a week until Test then you need to do one whole system in 3 or 4 days and then another whole system in 3 or 4 days. It could look like this:

Day 1: {123 123 123 Green Green

Day 2: 123 123 4 5

Day 3: 67 67 67 67 67} One Whole Treatment Complete

Day 4: {123 123

Day 5: 123 123 123 67

Day 6: 4 Green

Day 7: 67 67 67 (Leftover 123 in 5 minute rounds) (Green) 5} Another Whole Treatment Complete. Total of about 10 full length rounds of Steps 123, 2 Rounds of 4&5, 8-10 Rounds of 6&7, Some Short Rounds of 123 with leftovers, and a few Bonus Rounds of Green, Clear or whatever you have

AS YOU CAN SEE IT DOESN'T REALLY MATTER THE SPECIFIC ORDER YOU DO IT IN OR IF YOU SKIP DAYS. All that matters is that you complete all the rounds for your usage history and you try not to overdo it early on because if you irritate your scalp early then all following steps will get more and more irritated and it can become extremely uncomfortable.

Steps Checklist:

Apply to dry or slightly damp hair at least 4-5 times . (8-10 times for GreenOUT Ultra HeavyTOX)

<input type="checkbox"/>	APPLY 1 THEN RINSE.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	APPLY 2 THEN RINSE.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	APPLY 3 THEN RINSE.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	Use UV light in STEP 3	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Hint: Simplified Step 1, 2 and 3 Directions

- If you purchased a UV light, use in Step 3.
- Use a shower cap and hair dryer for better results. (Shower cap and hair dryer not needed when using UV)

Step 4: Mix bleach (powder) and developer (white liquid) to bleach the hair.

Repeat twice for GreenOUT Ultra HeavyTOX

Hint:

- Google a "bleach chart" and leave the bleach in long enough to get it to at least a level 8 or 9. For heavy THC, it's best to achieve at least level 9.

STEP 5 DYE : Purchase ammonia based permanent dye closest to current color or whatever color you want your hair to be

For #6 and #7, repeat about 3 to 5 times, depending on hair health, substance and usage levels, and HeavyTOX or 8 to 10 times for GreenOUT Ultra HeavyTOX

<input type="checkbox"/> STEP 6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> STEP 7					
<input type="checkbox"/> Use UV light	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Hint:

- For up to moderate THC usage or heavy usage of any other substance, aim at 5 rounds but check your hair by pulling it every 3-5 minutes to make sure it feels normal and has no breakage.
- If you have 6.1 6.2 and 7.1 7.2, check below to confirm the order – If you purchased a UV light, use in Step 7 (Optional).
- If you have time and remaining product, you can repeat step 1, 2 and 3 like shampoos with rigorous scrubbing for 5 minutes.

Note: You can dye at Step 5 AND/OR after 6 & 7. The dye is not just to get your hair back to looking normal. The chemical process is also important so doing it twice is beneficial, especially for heavy THC users. But then again, heavy THC users need to more than double this checklist.

If you have extra steps or you plan to add more steps, then

Second Dye

Step 8.3

Keratin Repair and further repairing process...

□ Double All of the Above for GreenOUT with Long Hair / Ultra HeavyTOX

2.2 DETAILED INSTRUCTIONS & EXPLANATION OF HOW IT WORKS:

THESE STEPS ARE OVERKILL AND NOT REALLY NECESSARY. IF YOU DON'T UNDERSTAND THEM OR ARE CONFUSED BY THEM THEN TOTALLY DISREGARD AND JUST FOLLOW THE SUPER SIMPLE INSTRUCTIONS ABOVE

Step 1-3 Washes: Overview

There are 3 washes/ leave in treatments included. The first two washes together remove metabolites and extra residue on the hair shaft and scalp, swelling the cuticle for better chemical flushing so that each consecutive wash can better penetrate, beginning to lift the cuticle. The third wash takes over with the lift, allowing the first chemical reaction to take place. The melanin-metabolite bonds are stripped and broken. Some metabolites are flushed out while others begin to experience complete molecular overhaul and are transformed into analytes that are undetectable through chemical processes such as oxidation and hydrolysis.

If your hair feels fragile or dry after any particular wash, you can use apple cider vinegar to help restore it's flexibility and shine but do not use regular shampoo or conditioner between steps 1-3. You can resume after step 3.

You might want to apply Vaseline to the top of the forehead before each wash and treatment to prevent the chemicals from irritating your forehead. Put a towel at the base of the neck. If you are finished for the day apply apple cider vinegar to the hair to help close the cuticle and rinse with cold water.

The heat aids in this process of opening the cuticle as well as catalyzing and accelerating other chemical reactions specific to each detox system: chemical and/or structural degradation, hydrolysis, leeching out, oxidation and reduction reactions, molecular changes of metabolites into undetectable analytes. Then the UV light polishes it off by exponentially improving the rate of reduction.

Continue using hot water throughout your wash sessions for that day until you are finished at which point you can use cold water to close the cuticle and apple cider vinegar to seal it and adjust the pH back to normal.

STEP #1 and #2 INSTRUCTIONS

Make sure to shake the wash bottles really well, until the chemicals appear evenly mixed, before application.

Choose Recommended 1A&2A **OR** Simplified 1B&2B

Step 1A and 2A (Choose whenever possible)

If you have a hair dryer, Use Option A. Heat is very helpful to the chemical reactions involved with steps 1-3.

- Apply evenly, to dry or slightly damp hair without water and scrub for 5-7 minutes while blow drying if possible
- apply shower cap
- leave on for 10-20 minutes while blow drying head.

- Remove cap,
- add a little hot water,
- scrub for 2-5 minutes,
- replace shower cap for 15-20 minutes
- continue blow drying.
- Rinse with hot water until you are done for the day at which point rinse with cold water

Step 1B and 2B

- Scrub crown of head down to neckline for 5-7 minutes without water
- leave on for 15-20 minutes
- get your hair wet with very warm water and scrub for 2-3 minutes
- apply shower cap and let it soak for 10-20 minutes
- rinse with warm water

**Use steps 1, 2 & 3 at least 4 times

STEP #3

(USE UV IF APPLICABLE) [Read Step 8 below]

Those with high toxin levels that did not purchase a UV light may consider going to a tanning bed with #3 in the hair or hanging outside in direct sunlight for the duration of the step.

Overview:

This step can lighten hair to different degrees depending on the person and how long it is left on for. The stripping away of melanin allows the melanin-attached drug metabolites to break their melanin bonds and wash out.

If you purchased a no bleach kit and don't want your hair color to change then you will have to reduce the amount of time it is left on per cycle and increase the number of times it is repeated. This is only recommended if you have moderate to low toxin levels because this is an important step for heavy toxin removal and the lightening is a good sign that its working.

To begin:

- apply to dry or slightly damp hair evenly and comb through hair.

For UV: Place UV light on head over different parts. 90% of time collectors will take from the top back of the head down to the back bottom of the head

TIP: You can place the light on a pillow and lay on it while you watch TV or relax]

- Apply shower cap and leave in for minimum 20-30 minutes* while blow drying (if possible) top-back (crown) of head down to neck and between the ears as much as possible (You can alternate between using UV and blow dryer each round)
- Next add a little hot water and scrub for 2-5 minutes
- Leave in for 10+ more minutes*
- Rinse with hot water

*Shoot for 45 minute total sessions with STEP 3. You CAN leave STEP 3 in for up to an hour or more if you have the time [and its worth it, especially if you purchased the UV light) whatever you have time for and can tolerate. Generally the longer the better. Most especially for cocaine, ETG and meth detox systems, but still very important for all.

Step #4 Optimized Bleach:

If you chose the No Bleach option with extra replacement treatment then skip Bleach and Permanent Dye and move down to Treatment 6 and 7

This step is a customized bleach treatment with specialized bleach and developer with added chemicals for each drug specifically, maximum chemical concentration, and adjusted pH for the greatest effect on destroying drug metabolites. If you don't know how to bleach your hair you can look it up on YouTube or Google. But you are going to mix the entire contents of the two bottles, the liquid with the powder and apply evenly to hair. Leave in for 10-20 minutes or until you reach at least a level 8 or 9 on a bleach chart. This is a strong mixture so pay close attention to your hair and if you have previous damage you probably don't want to keep it on longer than 15 or 20 minutes. Most people shouldn't require longer than that anyway.

If your substance was THC we highly recommend that you use this step. THC is the hardest substance to remove from the hair and requires as many chemical reactions as possible especially when attempting to cleanse your hair in a short time frame. If you have time for a personal test you can try the non bleach option first and if you fail you can add the bleach.

If you are using the non bleach option you need to add extra rounds of 1-3 and 6&7. Probably at least 5 of each of your hair can take it. But go slow and check on it often.

Permanent Dye Step:

(Technically step 5 but we don't consider it a step in our number system so there are no bottles labeled 5)

For this step you will use an (ammonia based preferred) permanent dye (purchase a color that is as close to your natural hair color as possible, maybe one shade darker because the next treatment will take it a shade down)

For healthy hair pick a developer that is 30 volume. For heavy toxins consider a 40 volume for healthy hair. Again, look it up on YouTube if this is your first time.

If you want you can dye after steps 6&7 instead.

Step #6 & Step #7 - Specially Formulated Treatments

*Make sure you use 7 after rinsing 6 off and within an hour or so.

With HeavyTOX you will have enough for at least 2-3 treatments of each 6 and 7. Long Hair/ Ultra Heavy Toxin Kit should have enough for 3-5 or more treatments.

If you have 6.1, 6.2, 7.1 & 7.2 apply 6.1 first and then follow it with 7.1. Apply 6.2 second and follow that with 7.2. Repeat.

For moderate to heavy THC usage you want to use at least 3-5 rounds of 6&7 or more if possible. For daily heavy THC usage you want to use 6-8 rounds of Steps 6 and 7. STEP #6

- Apply bottle labeled 6 to dry or slightly damp hair and leave in for:

- 16-25 minutes for short, healthy, thick hair*

- 15-20 minutes for normal hair*

- 13-18 minutes for color treated hair*

- 10-15 minutes for thin or damaged hair*

*These are only approximate times and our best estimates. We have had customers leave in for much longer, but know that exceeding these recommended times can negatively impact hair health and moisture level. Greatly exceeding these times can lead to broken hair and other severe consequences.

Men with short thick hair tend to have little to no problem adding a little extra time. If you have extremely high toxin levels then you may want to consider extra time but begin checking your hair at the 10 minute mark, touching, twisting and pulling on a small test piece every 5 minutes to ensure everything feels normal.

Women with long hair tend to prefer sticking to the recommended times to best maintain their current hair health. Greater times might only be recommended for very heavy THC use after a personal cost-benefit analysis.

As with anything feel free to check with us for our personal recommendation for your specific situation.

- Gently comb through the hair a couple times to evenly spread the product.
- feel your hair every 5 minutes to check that it's not overly breaking down
- ONLY if you feel confident that it isn't
- then go for another 5, check again and maybe another 5.

- then you will RINSE STEP 6 from your hair with warm-hot water for 4-5 minutes BEFORE applying STEP 7
- Within 1 hour of rinsing 6, apply 7 STEP 7:
- Apply treatment to dry or slightly damp hair for 15-25 minutes. Use with UV if applicable
- Gently comb through the hair a couple of times for even product distribution.
- Rinse with warm water.

And for optimal hair health:

<<<See RESTORE YOUR HAIR below

If there is enough left use them until they are empty. If you purchased HeavyTOX or TotalTOX you can do the extra treatments back to back or wait a day or so in between. Same with the extra washes. It's probably best with the washes to do a couple rounds back to back and use the rest at different times.

UV Light and Treatment:

If you purchased the UV light, use with #3, and sit under the UV light for up to 2 hours. Splitting your hair into sections, 4 quadrants at first and then 4 or more sections of each quadrants to be sure to rotate the parts of the hair that are receiving the light. You can also use the UV light with step 7. The synergy between the special UV light and the chemical treatments destroys 96-99% of the exposed drug metabolites by hour 2 depending on the drug.

We have NEVER had someone fail a hair drug test after using the FULL system with the UV light. Most effective (99%) for methamphetamine, ketamine, and cocaine and 96-98% destruction of THC, Opiate and benzodiazepine metabolites. If you have any of the washes remaining, use each of them now.

Bonus Step 8 Instructions ((THC)) ** Being Discontinued**

(Use within 24 hours of test)

- Use a small amount of Step 1 like shampoo for a couple minutes to begin. Then rinse warm.
- Next, apply half of 8.1 to hair, comb through and scrub into scalp. Leave in for 10-15 minutes. Rinse with warm water.
- Apply 8.2 and comb through hair and massage on scalp for 10-15 minutes then rinse with warm water.
- Apply the other half of 8.1 and scrub for 3-5 minutes and rinse well.
- Apply 8.3 and comb through hair, scrub well for 3-5 minutes and rinse well.

Other Bonus Steps

- Bonus Liquid: Use at any point in the system. i.e. Before Step 1, after Step 3, after step 7. Apply liquid for 30 minutes, rinse.
- Bonus Shampoo. Use as often as possible between now and your test. Replace your regular shampoo with it. Apply, scrub, leave in 15 minutes. Rinse

- Bonus Powder Mask – Pour some powder into a bowl. Add small amounts of water until it makes a paste. Apply to your hair. Leave it in until it dries. Rinse.

RECOMMENDED 9TH STEP

Purchase one or two keratin products: shampoo, conditioner, leave in conditioner, spray. Use up until your test and after in order to:

A) help repair any damage to your hair and

B) dilute the PPM (parts per million) of your hair with added keratin proteins which can give you an extra edge on your test that is equivalent to a decent percentage reduction in metabolites.

DIRECTIONS FOR OUR 2 PART RESTORE KIT:

Restore Step 1:

1. On clean, damp hair apply enough Restore Step 1 to thoroughly saturate hair and comb through with a wide tooth comb for even distribution.
2. Leave hair uncovered, DO NOT use a plastic cap. Place hair under dryer or use a traditional hair dryer on medium heat until hair is dried and becomes hard. DO NOT comb or agitate hair while drying.
3. Rinse hair thoroughly with warm water to remove excess protein.
4. Proceed with Restore Step 2 Hydration Solution.

Restore Step 2:

After using Restore Step 1 apply Restore Step 2 on clean, damp hair and distribute evenly. Leave on hair for 3-7 minutes and rinse hair thoroughly. Style as usual.

RESTORE HAIR MASK

Option A: Apply Hair Mask to clean, damp or wet hair, possibly after shampoo. Massage into hair and leave on for 7-10 minutes. Rinse.

Option B: Same as above but use as a leave-in conditioner.

More Repair and Restore Options for After The System

In addition to keratin products you can apply a deep conditioning treatment or hot oil treatment/ cover your hair with a shower cap, and leave on for several hours or even overnight and wash it out in the morning. This is recommended to do as soon after your final step 7 as possible.

4. HELP US HELP OTHERS

When you pass please be sure to leave a review on [Trustpilot.com](https://www.trustpilot.com), our website, and/or Reddit.

It takes a couple minutes. I get it, leaving a review feels like a waste of time and we are busy and if we are being honest, pretty selfish. But try to remember how you feel right now going through this process and what you're up against. There are some people that would really appreciate your feedback so that they don't waste their money on one of the many ineffective products out there. If this was your first time trying to pass a hair follicle then you might take this for granted that you passed and think that you could have passed with any product. But understand that you are truly one of the lucky few. Many people have tried and tried to pass over the years with countless products and haven't been able to until we brought our products to market.

If it was reviewing a video game or socks that's one thing, but your review of this product has the potential to drastically change someone's life. And by not reviewing, it could leave someone left to deal with serious consequences and no hope.

Please help us spread the word and help other people in difficult situations like yours. Help us gain momentum against the industry scam artists and save some people from being tricked by deceptive marketing processes at the worst possible time in their life.

We greatly appreciate you and your brothers and sisters in the world will also.

ALSO, IF YOU ARE ONE OF THE VERY FEW THAT DON'T PASS THAT IS UNFORTUNATE BUT REALIZE ITS NOT AN EXACT SCIENCE AND THERE ARE SO MANY VARIABLES AT PLAY. IT WORKS FOR WELL OVER 99% OF PEOPLE AND SO IF YOU GO AND TALK TRASH ABOUT IT YOU COULD BE TURNING SOMEONE AWAY FROM IT THAT REALLY NEEDS IT. OR WHOS CHILDREN NEED THEM TO NEED IT. WHICH IS SELFISH AF. BC THERE IS TRULY NOTHING ELSE THAT EVEN COMES CLOSE IN EFFECTIVENESS SO IF THIS DOESN'T WORK FOR YOU THEN NOTHING WILL. That isn't just marketing talk. It is 100% fact so try not to give us a hard time if you are the 1 out of hundreds/thousands. Also, if you aren't a heavy user then you have our permission to destroy us if you fail. But I have yet to see that. And just because you fail doesn't mean it didn't work. If you are a very heavy user (your starting levels are probably 15,000 to 90,000) and you come back with levels under 1000 or 2000 then it worked. You were just a wash or a round away from passing. So go do another round, on us, and go pass your second test.

5. SUCCESS RATES

To date, December 2024 we have only had less than 7 people claim to fail out of over 3500:

One very heavy THC user that didn't fully follow the instructions but still lowered her levels dramatically from 3.4 when she used Macujo method with Aloe Toxin Rid and failed at 3.4ng and then Macujo method with Macujo Aloe Rid and Zydol and still failed at 3.2ng.

She only did two rounds of 1-3 and still dropped down to .5ng with our product and says she probably would've passed if she did another round or two or bought the UV light and we agree. She still got the job due to low levels and still recommends us.

Another person was an extremely heavy THC concentrate user that went against a strong suggestion not to use on his beard in his situation (still brought levels down to .4) but 3 of his friends used it and passed so he realized he probably should've just taken our suggestion. (Body hair is much more difficult to cleanse & requires extra steps)

A third person was a girl that completely hid the fact that she had been using meth daily when she gave her usage history so we couldn't help her to the best of our ability with either the best product or best personalized recommendations. So really she doesn't count.

We possibly had one person fail for each cocaine and meth which were both anomalies in which the details didn't really add up but it's definitely possible seeing as how all hair is different and there are so many variables. Another girl failed for meth but she claims she followed it to a Tee although she has a different definition of that than we do when replacing bleach with highlights, using a lower volume developer than recommended and a couple other things.

Regardless, there is not another hair detox with success rates even half as good as ours. So rest assured that if you have any chance of passing it is going to be with this system.

So if you are a very heavy user or even a moderate THC user then do all the steps to their fullest (even though most people probably don't need to). Or for Heavy THC usage use the whole system twice. Steps 12367 4-5+ times and Steps 4&5 once. And then Steps 12367 4-5+ times and 4&5 once again. With as much time between the two as possible. And for your sake please don't lie about what or how much you've been using if you want us to give you the best recommendations for your usage history and patterns.

6. TEST YOURSELF

It's always advisable, if you have time, to get a personal test before your official test. And if you don't then you only have yourself to blame because we will gladly help you get over the line.

If in the 1 in 10,000 chance that you happen to fail this test, although highly unlikely, we will do everything in our power to make sure you pass.

If you do fail the test, the level of toxins in your body will still quite possibly be very low, and may be just above the threshold. If you tell us which substances still fail, we will provide you with additional products specifically designed for these toxins, free of charge, if you have the time.

In the event of an emergency, if you don't have time to wait for our product, we will customize a plan to provide you with products that you can purchase locally. Even if you can't use our products, we still try our best to offer you a ray of hope.

Again, we haven't seen this happen yet but if it happens to you we stand behind you and our products 100% and will keep working for you until you pass.

CONCLUSION

Your hair is officially toxin free. Congratulations!

Please send us a picture of your passing test results, especially if you have before and after test results. We'll pay you \$10 for your passing test results or \$20 for your passing before and after test results.

We will pay YOU via cashapp, zelle, or venmo \$20-\$50 for any friend referrals.

Please email or text us feedback related to instructions. We are still in early stages of getting the product to market and would appreciate learning what we can improve in helping you understand the instructions and implement the system.

Any adverse reactions? How many washes could you do? Did you have enough product for your hair? What length is your hair? What were your starting levels before you began? Any other insight for us?

Refund, Return, and Replacement Policy

Please remember due to the nature of the products there are absolutely NO REFUNDS. We will replace any product damaged during shipping and ship it to you free of charge or do whatever else we can to make it right. But there are absolutely no refunds once product has been shipped. Please take pictures to show any evidence of damage during shipping. Thank you! Thanks again for shopping with us, and thank yourself later after you have passed. Also, shipping is NONREFUNDABLE under any circumstances.

Take care!
