

# SciTOX Detox – Frequently Asked Questions

## Quick Reference – Short Answers

Question	Short Answer
How effective is SciTOX at passing a hair follicle drug test?	SciTOX reports a 99.75% Effectiveness with reviews across all platforms and testimonials across internet forums appearing to support this
How does SciTOX work?	It's a multi-step chemical process that opens the hair cuticle, breaks down and detaches drug metabolites, removes them, and then reseals the hair. Different chemical reactions occur in different steps. Such things as breaking the melanin-metabolite bonds and stripping them away, changing the molecular structure of some metabolites into other analytes that are not detected, rearranging the keratin structure and breaking the keratin-metabolite bonds and stripping them away, oxidization, degradation, leeching out and other less important processes occur as well.
How long does the detox take?	Plan for a minimum of 3 hours from start to finish. Plenty of people use the system in a few hours or less last minute the day of but we recommend spacing the standard protocol out over at least 3 or 4 days or even starting a week before if you have the time. For the Double Protocol for Heavy / Daily / Frequent THC usage and extremely heavy daily usage of other substances we recommend spacing it out over at least 6 or 7 days but even two weeks to minimize strain on hair if you have the time. For the No Bleach version for heavy use we recommend using it over two weeks. For No Bleach version for any other use besides daily you can use it the same as the standard protocol.
Are results permanent?	Yes, SciTOX cleanses existing hair permanently—it doesn't just mask the drugs. However, after about 10 to 14 days the metabolites will have grown out past the scalp enough to potentially be cut again. At 45 days after finishing the system consistent users will have about a half inch of toxin filled hair. It is possible to extend the Window to a couple weeks or more if necessary. Inquire with us directly about this. It is also possible to maintain clean hair over an extended time with weekly maintenance.
Will it work on all substances?	SciTOX targets a broad range of drugs, including: Cocaine/crack, THC, Methamphetamine & amphetamine/MDMA, Opiates, Ketamine, Alcohol (EtG), and prescription stimulants like Adderall.
SciTOX damage my hair?	The process can cause temporary dryness or brittleness, primarily if used in less than the recommended time frame, or if going overboard with the process. Most people that use the system over the minimum recommended number of days or longer don't notice any damage. At most, minimal temporary dryness or textural changes that normalize after a week or so. In extremely rare

	<p>instances, when recommendations are ignored more serious damage may occur.</p> <p>People with thin, damaged or recently treated hair are most at risk, but mainly only if using the system in a short time frame or exceeding recommended product application time limits. {It's always better to err on the side of caution and use the products for less time. <i>You can always do another round. <b>Six or seven 5-10 minute rounds of Step 6, 6.2, 6.3 over a week or more are much less likely to cause damage than Five 20 minute rounds in a few hours or even a day or two. The strain on hair and scalp irritation can be greatly reduced or eliminated completely if you space it out over enough time.</b></i> YOU HAVE TO DECIDE IF IT IS WORTH THE RISK AND TAKE THE STEPS TO MINIMIZE IT OR TAKE A CHANCE</p> <p><b>We are starting to offer our New GentleTOX, GentleTOX Heavy, and GentleTOX Ultra, offered without a bleach step along with other more gentle replacement ingredients, as well as lower concentrations and more balanced pH with hair health and skin comfort prioritized</b></p> <p><b>. We recommend two weeks or more for optimal effectiveness and most gentle effect on hair and scalp.</b></p>
Do you offer a guarantee?	Yes—if you follow the instructions exactly and still fail, SciTOX offers a money-back guarantee and in some cases double your money back.
Are reviews real?	SciTOX publishes verified customer feedback through Yotpo and Trustpilot with an average rating of 4.5 to 4.9.
How do I choose the right system?	Factors like toxin type, usage history, hair length, and color affect which kit you need.
When should I test after treatment?	The 'golden window' is within 7 days of treatment but ideally test the day after you finish the treatment
Can I use other shampoos or products after SciTOX?	Avoid products that coat the hair (silicones, heavy conditioners) until after you complete the treatment, as they may affect chemical penetration.
How does a hair drug test work?	Labs take a 1.5-inch hair sample from near the scalp, representing about 90 days of history. They test for drug metabolites embedded in the hair shaft, not just surface residues. *NOTE: JUST BECAUSE IT'S A "90 DAY" TEST DOESN'T MEAN THAT IF YOU QUIT FOR 90 DAYS YOU WILL PASS. WITH ANY SORT OF CONSISTENT USAGE, A PERSON IS LKELY TO FAIL FOR AT

	LEAST A FEW MONTHS AND EVEN UP TO A YEAR OR SO WITH HEAD HAIR. WITH BODY HAIR IT CAN BE 10 TO 13 MONTHS.
Why do employers or courts use hair testing?	Hair testing is harder to cheat, detects longer usage windows, and provides a more complete picture than urine or saliva tests.
Can bleaching or dyeing help you pass a test?	Cosmetic changes alone rarely work—labs can still detect metabolites within the hair.
How soon after use will drugs appear in hair?	Usually about 7 days after use. But more like 10 to 14 days for the hair with toxins to be grown out enough past the scalp to likely be cut and submitted.
Can body hair be tested?	Yes—body hair can reflect drug use over an even longer period because it grows more slowly. Usually 11-13 months

Are home hair drug tests reliable?	Some are accurate for general screening, but most employers and courts require lab testing with confirmatory methods like GC/MS for legal or official results.
How long does it take?	Plenty of people have used the system in a few hours or less the day of the test and passed for most substances and usage patterns. However, we strongly suggest using it over at least a few days or a week if possible to minimize or eliminate side effects.
Is it permanent?	It is permanent on the hair it is used on and is generally permanent for people who have only used up to a few times—except for coc, which metabolizes strangely and can grow out sporadically for up to a year, sometimes causing fluctuating results. For consistent users metabolites will grow out for at least a few months, probably 6 or 7 and oftentimes up to a year or more
If I'm clean for 90 days will I pass?	Not necessarily. The “90 Day Test” just means they collect 1.5 inches which generally reflects about 90 days since each half inch is about a month of growth. However, this does not mean that metabolites from previous usage will not continue to grow out. THIS IS THE MOST COMMON MISCONCEPTION IN HAIR TESTING. MOST PEOPLE WILL STILL FAIL PAST 90 DAYS AND UP TO A YEAR DEPENDNING ON THE SUBSTANCE AND AMOUNT USED
If I used once will I pass?	If it was THC, you will probably pass, as it usually takes several uses for THC to be detectable. For most other substances a single use is highly likely to be detected.

How fast is shipping?	Standard shipping takes 3–5 days and is free for orders over \$250. We also offer 2 Day shipping as well as 3 Overnight options: before 11PM, before Noon, or Before 8AM to most places (9PM to others and sometimes 2PM at the earliest for rural areas)

## **Full FAQ Answers**

### **How effective is SciTOX at passing a hair follicle drug test?**

SciTOX reports a 99.75% success rate for customers who follow the instructions exactly. This covers cocaine, THC, meth, amphetamines, opiates, ketamine, alcohol/EtG, and more. Failures are extremely rare and often linked to skipped steps or incomplete treatments.

### **How does SciTOX work?**

It's a multi-step chemical process that opens the hair cuticle, breaks down and detaches drug metabolites, removes them, and then reseals the hair. The treatment typically involves 7 or more stages, with optional steps like bleaching and UV light treatment for maximum effectiveness.

### **How long does the detox take?**

Plan for a minimum of 3 hours from start to finish. Many customers complete the process in one session when necessary, but most repeat certain steps over at least a few days for added certainty.

### **Are results permanent?**

Yes, SciTOX cleanses existing hair permanently—it doesn't just mask the drugs. However, any new hair growth after treatment is likely to contain metabolites if any sort of consistent usage occurred prior to treatment and of course if use continues.

### **Will it work on all substances?**

SciTOX targets a broad range of drugs, including: Cocaine/crack, THC, Methamphetamine & amphetamine/MDMA, Opiates, Ketamine, Alcohol (EtG), and prescription stimulants like Adderall.

### **Will SciTOX damage my hair?**

The process can cause dryness or brittleness, especially if you choose optional bleach steps. Many customers feel the temporary damage is worth the clean test result. Using deep conditioners afterward helps restore softness.

### **Do you offer a guarantee?**

Yes—if you follow the instructions exactly and still fail, SciTOX offers a money-back guarantee and in some cases double your money back. Proof of correct usage and test results is required.

### **Are reviews real?**

SciTOX publishes verified customer feedback through Yotpo and Trustpilot. Many independent users also share results on Reddit and other forums.

### **How do I choose the right system?**

Factors like drug type, usage history, hair length, and color affect which kit you need. Contact SciTOX support for a personalized recommendation.

### **When should I test after treatment?**

The 'golden window' is within 7 days of treatment. This maximizes accuracy while avoiding regrowth contamination. Even better to use the system up to a day before the test.

### **Can I use other shampoos or products after SciTOX?**

Avoid products that coat the hair (silicones, heavy conditioners) until after your test, as they may affect test penetration.

### **How does a hair drug test work?**

Labs take a 1.5-inch hair sample from near the scalp, representing about 90 days of history. They test for drug metabolites embedded in the hair shaft, not just surface residues. \*NOTE: JUST BECAUSE IT'S A "90 DAY" TEST DOESN'T MEAN THAT IF YOU QUIT FOR 90 DAYS YOU WILL PASS. WITH ANY SORT OF CONSISTENT USAGE, A PERSON IS LIKELY TO FAIL FOR AT LEAST A FEW MONTHS AND EVEN UP TO A YEAR OR SO WITH HEAD HAIR. WITH BODY HAIR IT CAN BE 10 TO 13 MONTHS.

### **Why do employers or courts use hair testing?**

Hair testing is harder to cheat, detects longer usage windows, and provides a more complete picture than urine or saliva tests.

### **Can bleaching or dyeing help you pass a test?**

Cosmetic changes alone rarely work—labs can still detect metabolites within the hair. SciTOX's process combines cosmetic changes with targeted chemical treatments to actually remove metabolites.

### **How soon after use will drugs appear in hair?**

Usually about 7 days after use. At about 10 to 14 days hair is grown out past the scalp enough to potentially be collected. Very recent use might not appear, but the next 90 days' worth of hair growth can retain a record.

### **Can body hair be tested?**

Yes—body hair can reflect drug use over an even longer period because it grows more slowly. Usually 10 to 13 months.

### **Are home hair drug tests reliable?**

Some are accurate for general screening, but most employers and courts require lab testing with confirmatory methods like GC/MS for legal or official results.

### **How long does it take?**

Plenty of people have used the system in a few hours the day of the test and passed for most substances and usage patterns. However, we recommend pacing the system out over at least 3 or 4 days, or even a week if you have the time, to minimize strain on your hair or irritation to your scalp. For frequent THC usage with little to no clean time, we recommend using twice the standard protocol: at least 7 or 8 rounds of steps 1-2-3-6-7, two rounds of steps 4-5, and a few bonus rounds, spaced over 6 or 7 days.

### **Is it permanent?**

It is permanent on the hair it is used on and is generally permanent for people who have only used up to a few times—except for white and possibly crystal, which metabolizes strangely and can grow out sporadically for up to a year, sometimes causing fluctuating results. Any consistent usage is likely to grow out for at least a few months, probably up to 6 or 7, and potentially even up to a year or more.

### **If I'm clean for 90 days will I pass?**

Not necessarily. The '90-day test' name comes from the fact that labs collect about 1.5 inches of hair from the scalp, and each half inch represents roughly a month of history. This does not mean that toxins used

before those 90 days will not still appear. Even a few uses of cocaine or meth can sometimes be detected for a year or more.

### **If I used once will I pass?**

If it was THC, you will probably pass, as it usually takes several uses for THC to be detectable. However, heavy or daily THC use is the hardest to remove due to the THC-COOH metabolite. On the other hand, a single use of meth, cocaine, some opiates, and most other drugs can still be detected.

### **How fast is shipping?**

Standard shipping takes 3–5 days and is free for orders over \$250. Two-day and overnight options are also available, with delivery times before 11 p.m., noon, or 8 a.m., depending on the option selected.
