A-B-C DATA

It's as easy as A-B-C!

A- Antecedent e.g. What was going on right before the behavior?
B- Behavior e.g. What happened?
C- Consequence e.g. What happened after the behavior occurred?

ABC data is an important part of ABA as it allows us to find the function (or why did that happen?) of behavior. Your child's team likely collects ABC data already but you can do it too! Taking ABC data for a new behavior will provide data for your child's BCBA to implement intervention to best support your kiddo!

Do you have questions about how to best log ABC date? Your Clinical Director is full of suggestions!

Emergency Situation Protocol

In the event of an emergency situation during session times, we have updated our company protocol. Please see below:

Process in the Event of an Emergency -

- Call 911
- Call scheduling who will contact the emergency contact and let clinical director know
- Fill out Incident Report Form within 24

Client Caregiver Emergency Info -

- This information should be collected during the initial pairing and will be inputted within Central Reach client profile under "Profile>Addition Contacts>Emergency Contact Listed"
