

WARNING: GEOENGINEERING IS CATASTROPHIC FOR ALL LIFE ON THE PLANET AND IS A MAJOR CAUSE OF CLIMATE CHANGE!

SOLAR RADIATION MANAGEMENT also known AS **STRATOSPHERIC AEROSOL SPRAYING** or **CHEMTRAILS** is a worldwide operation, that is not just in the planning phase, as many official documents and press releases suggest, but it's been actively and intensively deployed since the '90s. The pulverized chemical trails form artificial clouds that linger in the sky for hours and spread creating a foggy whitish blanket, a so-called "sky shield". This EMF conductive **SKY SHIELD** is vital for military space and ground control, communications and also for synthetic biology (transhumanism, terraforming) and weather modification operations (see Elana Freeland's books on Amazon). It sucks the humidity from the air, prevents rain and reduces sunlight, resulting in a "global dimming", an admitted purpose, but also concern of the world's governments, from the perspective of the controversial 'global change/ warming' (watch on YT the documentary **THE DIMMING** by Dane Wiggington – GeoengineeringWatch.org). According to NASA, the world had already seen a **20% loss of sunlight**, a fact that in itself, directly causes incredible damage to the entire web of life and food resources through the reduced photosynthesis, not to mention the diminished natural capacity of vegetation to capture carbon (CO2). But the increasing pollution of atmosphere is even more worrying.

With all the talk about a clean, green environment, geoengineering (saturating our atmosphere daily with toxic chemicals) is a peculiar way to achieve it!

According to the data offered by the most documented, independent geoengineering portals (geoengineeringwatch.org, globalskywatch.com and CarnicomInstitute.org) dangerous amounts of **aluminum, barium, strontium, cadmium, sulphates, but also graphene, polymers and other synthetic toxic materials** in nano and micro particle form are systematically being dispersed at high altitude from **unidentifiable planes** (to check this, observe the air traffic in your area with flightradar24.com). All these elements are highly toxic for all forms of life; they gradually accumulate in air, water and soil and are now at very abnormal levels, as testified by independent lab tests. **Forests, crops and all plant life are visibly declining, while dangerous molds, mildew, fungi and bacteria are proliferating due to the excessive die-off and decay of living organisms. Biodiversity on land and in waters is severely affected, and now it is admitted that we are experiencing an accelerated extinction of species. 75% of the insect population of the world has disappeared, pollinators and also much of the wildlife species on our planet have been affected by massive die-offs. Indeed, it is not just this chemical pollution affecting all life, but also the incredible increase in RF (non-ionised) radiation, from tower cells, meteorological radars, ionospheric heaters (such as HAARP) and particularly, 5G satellites.** This radiation has got not only a direct and cumulative toxic effect on cells and DNA, but also a potting effect on any chemical poison, because of the opening of cell membranes (voltage-gated channels) – please see and download this very important document **EXTREME DANGERS OF RF 4G,5G and 6G - Apr 2025.pdf** from unitefortruth.online.

The soil life is being destroyed and with this, also agriculture is severely undermined (consider that GMO crops that are damaging for health, have been engineered to resist draught and high levels of Aluminum accumulation)

According to highly respected medics such as neurosurgeon **Prof. Russell Blaylock** and **Dr. Richard Klinghardt**, the effects of these aerosols on human health are undeniable, contributing to or directly causing:

- **Asthma & other respiratory ailments, • Pneumonia-Like Symptoms, • Eye & Skin Irritations, • Raspy Throat, • Allergies, • Headaches, • Skin disorders, • Immune system decline, • Vision problems, Muscle weakness, • Hair los • Neurological problems, •Heart, Kidney and Liver damage, • Osteoporosis, • Chronic inflammation • Severe lung and intestinal diseases, • Cancers** – all these, including the unavoidable and most damaging synergistic effects with RF radiation.

Various major official actions against geoengineering happened more recently – **in 2024 Mexico banned geoengineering and also the State of Tennessee (Climate Engineering Ban Legislation), while New Hampshire introduced a similar bill.**

According to **Dane Wiggington**, lead researcher at GeoengineeringWatch.com, the most important purpose of these operations is still related to climate change, but not related to CO2, but to **METHANE – the Arctic and Permafrost Methane**, which is 80 times more potent than CO2 on a 20 year scale and which is now at the highest levels ever recorded and seemingly triggering a catastrophic and accelerated change in the climate patterns. You can read and watch many things on this issue on YT. However, the actual use of geoengineering and RF radiation on earth and space appear not only to destroy life, but also to much accelerate the release of methane deposits (through industrial agriculture, landfills and oil/gas wells, particularly fracking played also a notable role in this). So, instead of allowing nature to recover and promote a more wise and humane exploitation of its resources for the benefit of both humanity and the planet, the proud owners of these powerful technologies have chosen instead to force nature to the very last atom, thus surviving and continuing to rule the earth through the means of bio and nano technologies, through merging with machines, depopulation, wildfires and terraforming, which unfortunately, can only end up in catastrophe for all of us.

WARNING: 'WILDFIRES' INCIDENCE INCREASING IN SCOTLAND AND THE UK!

WEATHER CONTROL PATENTS and also, known and observable effects of the use of ionospheric heaters, lasers, radiofrequency/ meteorological radars and acoustic waves in weather manipulation, have been documented by independent researchers and have been practiced by the developed nations for many decades (climateviewer.com) Extreme weather events can be mitigated, but also redirected and enhanced by such technologies. Consider the obvious thing that the **AEROSOL SPRAYING (CHEMTRAILS)** in an area visibly destroys the natural clouds and, through the resulting persistent chemical sky blanket, always prevents rain to occur. Such heavy spraying has been observed and reported by many residents for days before the extremely destructive recent 'wildfires' in the US. The used nanoparticles that are not naturally occurring destroy the vegetation and, through bioaccumulation, make them much more combustible.

The presence of a **NETWORK OF TOWER CELLS, RADARS (street, building and automatic doors etc) and RADAR STATIONS** emitting non-ionising radiation, especially of higher frequencies (5G) contribute to the electrification and increased combustibility of the air, according to **Prof. Emeritus Martin Pall**. If such installations are exposed to a fire, the special chemicals in the infrastructure can release very **toxic gases**, that may lead to the evacuation of an entire community, tells us Nobel Laureate, **Prof. Devra Davies**. Even more dangerous are **ELECTRIC VEHICLES (EV) and BATTERY STORAGE SYSTEMS**, based on **LITHIUM ION BATTERIES** - which exposed to heat or shock undergo an extremely dangerous and rapid **runaway thermal reaction**. Fires resulting from this are almost impossible to quench and release lethal gases.

The **spraying of herbicides such as ROUNDUP** (intensively practiced in agriculture, but also in communities, by Councils) severely affects all life and, gradually destroys the vitality of the trees and the bushes contributing as a major aggravating factor in the case of a local forest fire. Even more destructive and dangerous from the perspective of a **fire hazard** are the practices of completely **DESTROYING THE BUSHES AND TREES** through abusive cutting and allowing **poisoned, fallen and dry trees, cut bushes and branches and piles of grass** to accumulate in the landscape.

The presence of **LANDFILL areas** very near to communities is also a known fire hazard, due to the unavoidable **methane emissions** resulting from the decomposition of organic material and obviously, also the presence of known **deposits of coal and gas** in the area that have been or are being exploited. Almost any industrial activity is requiring high energy and various chemical substances, thus **local factories** can be very dangerous for a community in case of a serious fire

If you live in an area where any of these factors are present and where, eventually, there have been already some fires (see, for example, the town of **Cumbernauld**, which is affected by all mentioned factors), it would be advisable to ask (**FOI**) your **Council and Fire Department** about the measures in place in case of wildfires/ storms and also, about those meant for prevention. The community should demand proper actions and **council members should be made personally liable (Notices of liability)** for all their decisions that may lead to the potential increased destructive capacity of a wildfire in your area.

Please watch: **WILDFIRES AS A WEAPON, US MILITARY EXPOSED** on YT (Dane Wiggington) or GeoEngineeringWatch.org

It appears that very many people in communities directly affected by devastating 'wildfires' (but not only) believe that they have been victims of attacks with **DIRECTED ENERGY WEAPONS**, and due to extremely strange facts such as having **houses randomly turned to ashes or cars melted** (which requires much higher temperatures than any natural forest fire), while **nearby trees manage to resist** and even to keep their foliage. It appears that **high power lasers and microwave weapons/ radars** could lead to **plasma fires and strong winds** that would justify the catastrophic and targeted impact of such fires. As amazing as it may be, it is very easy to observe on **Google Maps**, that very many people, entire communities and institutions in Asia, Africa and in many other countries in the rest of the world, have chosen to paint the **roofs of their buildings BLUE** (hinting at the possible use of portable **sapphire lasers**). On the other hand, some professionals have warned that **SMART METERS AND ALL WIRELESS DEVICES**, if active, may play an important role in **connecting the target via cell towers or satellites** to the DEW's; a small research online (Google, YT, rumble.com, substack.com) regarding the military use of DEW's points indeed, to this possibility. In Lahaina, for example, some locals have observed some houses without smart meters that have not burned, though the neighbouring ones did. **Lahaina, Vina Del Mar, Los Angeles** and other communities affected by 'wildfires' appeared to have plans in place to become **smart cities**, according to the sustainable agenda. There may be, of course, other notable reasons, such as important **ground resources** (ex. the mines of lithium and quartz in North Carolina) or a particularly **geo-strategic** position.

Consequently, the fact that a Council may adhere to **plans of transformation and 'regeneration' through demolishing older, strong buildings and 'building back better', or through blocking of streets and fencing large areas, while increasing excessively the number of new buildings or high flats and promoting the insulation of buildings with new, trendy materials** (remember **Grenfell Tower!**) under the guise of **ULEZ** and **NET ZERO** should also be carefully considered.

Another fact of the greatest importance that has been observed and reported **during and after many of the catastrophes** happening in the US, but also, for example, in the case of Spain's floods of last year, was that **the response of the authorities in charge was deplorable**: no alarms, no proper plans and means to evacuate people, no proper resources to deal with the fire (or flooding), almost no support at all in the first critical days after the incidents and even some shocking attempts to prevent people to help each other through private means, while organised looting being allowed, if not even facilitated. In **North Carolina and Tennessee**, many months after the catastrophic hurricanes, people were still living in tents after being, in some happy cases, compensated with 700\$ by the government. Though promised, rebuilding did not happen in the affected areas, people being even prevented return and rebuild with their own means. **Very many people and families have lost their lives in these catastrophes, while the authorities and the press presented ridiculous numbers**, insisting on the material loss and blaming either the climate or the political scapegoats. No official follow up, no mourning for the victims (not even for the acknowledged **1000 disappeared children of Lahaina**), no care for the survivors; instead, the nation is stunned by the political show and made to worry about immigration, wars, new pandemics, taxes, loss of jobs and inflation, so the truly, most devastating effect of these engineered cataclysms on the nation would, as much as possible, be forgotten. Thus, it appears that it's just up to the people, to help each other in dealing with such dire events. Therefore, we would strongly suggest **people in families and communities to get closer to each other and start organising**, prepare reserves of **food, seeds, tools, gas, batteries etc and plans of action** necessary to cope with what the future will surely bring sooner, rather than later, to all of us. Consider that the already visible trend is to collapse the economies and ensure the final transfer of wealth from all of the nations, to them, the richest, that consider themselves the gods of this world. But as written, they will not succeed and the time of their dark dominion will be very short, while the people who will stand together in love, peace and solidarity, with God's help, will manage to overcome all challenges.
