Ellie Peacock: 18-year-old Australian nurse in training develops three blood clots after AstraZeneca shot

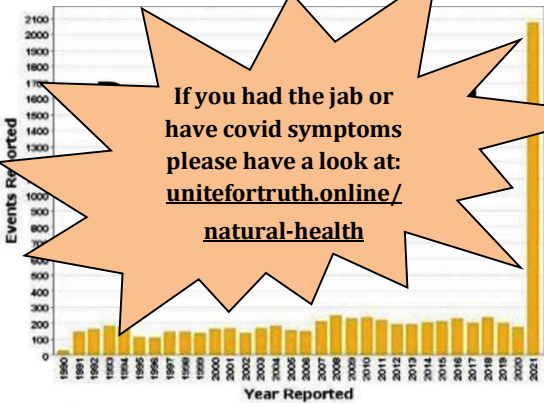

Young People DEAD or Crippled

following the experimental Pfizer COVID Shots

Many 1000's of people have died after taking the jab. At the beginning of July 2021, in the UK, the governmental MHRA database reported over 1,403 deaths and over 1,007,253 adverse events after covid vaccination. In the EU, end of June have been reported over 15,473 deaths and 1,509,266 injuries (EudraVigilance) and in the US 6,985 deaths and 489,098 injuries (CDC - VAERS) which is more than all deaths recorded in relationship to all given vaccines in the last 29 years. Science and statistics show now that the jab is definitely more of a risk to children and youth than the disease.

Doctors, Nurses, Consultants, Teachers and all officials who did not provide INFORMED CONSENT to the parents of injured children will one day be personally held liable in court for the health damages and deaths occurring as a result of the experimental 'vaccine', but the loss of a child will surely never be compensated.
