NOTICE OF LIABILITY REGARDING ALL FORMS OF DIGITAL ID

To:

DIGITAL ID AND WHY WE NEED YOU TO STAND AGAINST IT

The Digital ID is an electronic application (token) meant to be used on personal smart phones and based on a centralized government-controlled database potentially containing all previously separated data of each resident of the country, related to residency status, studies, work, health, assets, legal and financial situations and transactions, online activity etc about each resident. In the UK, this has been officially introduced by Keir Starmer, under the main justification of preventing illegal migration and slavery, despite a fierce backslash. Even some of his own MPs have described this plan as an "**utter, dystopian disaster**". Here it is noteworthy to observe that Germany, France and Spain, which already introduced the digital ID, still have to cope with illegal immigration and even on a higher scale than the UK. Also, as often reported, it appears that the illegal migrants, who are already housed and paid by the government for years, may not necessarily work for a living.

The ownership of a Digital ID, be it the so-called **BritCard** (inside the mobile app called **GOV.UK Wallet)** or the Scottish **ScotAccount** will allow the person in case, but also any, theoretically legitimate interested institutions (national or international) to easily access all the personal data to be found in the AI-controlled, digital national database.

Any person living in the UK will be required to use the BritCard to prove his/her **right to live, work and get housing in the UK;** in Scotland**, the ScotAccount will give access to all government services, including healthcare, benefits and taxes.** Thus, in a short time, as we have already seen in the case of China and other countries[i], the access of the population to **banking[ii], health services[iii], social assistance, online platforms (including governmental)[iv] travel, education, public spaces, shopping[v]**, practically, to all aspects of social life and subsistence, may be entirely conditioned by the Digital ID.

The UK Government has also already launched a **Veterans Card** and a **digital driving license** and plans to offer '**digital alternatives**' to all services' by 2027. Despite the government's contrary claims, **the rollout of mandatory Digital ID can definitely lead to dangerous and potentially fatal situations of social exclusion** (trespassing the Equality Act 2010, s.19[vi]) **, as older people, the homeless and very poor, the sick and injured, the people with disabilities or limited digital literacy, the electro-sensitive people that cannot endure wireless radiation, the ethnic minorities, the people in isolate, remote areas with unstable or limited Internet connection, may very probably find themselves excluded from accessing critical services necessary for their well-being and even survival**. **The simple loss of the personal mobile phone may turn into a catastrophe!**

However, not only some rare circumstances may make a decent access to Internet impossible, but also many other predictable situations in our global difficult circumstances: **severe climatic events of any kind** (which have happened everywhere and have been predicted to increase in frequency and intensity)**, fires and wildfires, violent social conflicts and local increase in crime, terrorism, cyber or drone attacks, military invasions, bombardments, EMP events (**natural – due to solar geomagnetic activity, or artificially created) etc. **People may discover very suddenly not only that their bank accounts have been erased, but even all data related to their individuality**. Are then such miserably affected people, potentially more exposed to restrictions, abuses and crimes, or not? Or where is the human dignity and the dignity of life when all necessary interaction and support in society depends on a digital structure, which can suddenly be erased forever?

But even if we suppose that, by the great grace of God, every resident of the UK will be protected from such critical situations and that all vulnerable people will always be able to find help whenever needed to use the Digital ID and the Internet, we have to understand that, as testified by professionals**, all wireless communications, no matter how well**

encrypted, are prone to hacking, so there is still a good chance that **personal data of any and all kind, may sooner or later become accessible to foreign or even hostile states, organizations or individuals and may be, as it has already happened with other governmental databases in various countries, be accessed, stolen and sold by hackers**. The reality is that **the risk of hacking and misuse of critical personal data stored in such systems, nullifies any legal imperatives of privacy, safety and data protection**[vii]. Please read also Daily Expose's groundbreaking report: ***'Checkpoint Britain: the dangers of digital ID and why privacy must be protected'*** https://bigbrotherwatch.org.uk/wp-content/uploads/2025/09/Checkpoint-Britain.pdf

Another very important weakness of the ID digital system refers to **the use of AI, which has been found to unavoidably fall prey to IT glitches or so-called 'hallucinations', which makes full dependency on such systems, potentially very dangerous for users**. A few of the relevant examples presented by Daily Expose[viii]:

"Netherlands' childcare benefits scandal – 2021

Automated risk profiling and aggressive enforcement mislabelled thousands of families as fraudsters. Debt payments were incorrectly demanded from genuine cases, the system was shaken, and the political fallout triggered the government's resignation.

Denmark's failed welfare algorithm – 2024 to 2025

Dozens of fraud detection models monitored benefits claimants. Rights group Amnesty International reported that the algorithms risk mass surveillance and discrimination against marginalised groups. The systems remained in use as scrutiny continued into 2025. […]

France's predictive policing backlash – 2025

Civil society documented predictive policing deployments and called in May 2025 for an outright ban. The evidence shows hotspot forecasting and risk tools that are opaque and likely to reproduce bias. These systems are trained on historic data which sends officers back to the same neighbourhoods that may already have been over policed, while very little is done to educate the masses on how it works and there's no credible path to appeal. […]

Australia's Robodebt fallout and new automation faults – 2023 to 2025

A Royal Commission found the automated debt scheme unlawful and harmful. In 2025, watchdogs flagged thousands of wrongful JobSeeker cancellations tied to IT glitches in the Target Compliance Framework. Strategies were published and apologies made, yet incentives still rewarded speed over care."

Now let's also observe that this Digital ID enterprise is not simply a decisive national effort, involving UK specialists and companies, but a global development, that was promoted in the UK by the most controversial ex-prime minister **Tony Blair** (founder of the "**Institute for Global Change**"), who was paid by **Larry Ellison** to act as the main UK lobbyist for his company, Oracle, in this field[ix]. The giant corporation **Oracle has been already involved in several major scandals regarding privacy violations, bribery, Internet security breaches, copyright issues, overpricing and unreliable technology.**[x]

We also have to remember China's example, in matters of their authoritarian and absurd **Social Credit System, linked to individual digital accounts, which demonstrates the huge possibility of a government gradually controlling and submitting the population, once a Digital ID becomes mandatory**. Thus, the authorities can easily impose a system of automatically promoting or demoting the social and human rights of any person, in function of their established set of criteria – for ex. healthy eating and life habits (vaccination included), political compliance, energy consumption (carbon credits scores) etc. **Programmable money or CBDC** (Central Bank Currency) can also be introduced and linked to Digital ID's, as they have been promoted for years by Central Banks, international financial institutions and governments. Once operational in the country, **all money transactions** will be monitored and controlled directly by a foreign Central Bank, in

cooperation with globalist, unelected authorities. All such digital, 'programmable' money are, by design, temporary and unreliable for the owners of the accounts; the bank controls them at any time, and can condition them through the **Social and/or Carbon Credit Scores attached to the Digital ID**. This means that **people's capacity to buy, sell and access will be depending not on their work and legitimate revenues, but on the special permissions and conditions of the bank, in function of the 'grades' or the 'social utility and compliance' of the person, as reflected by their Social and/or Carbon Credit Scores. With restricted access to money, people will find themselves in incapacity to cope with housing and energy bills or with potentially demanded NET ZERO improvements of properties, which may lead to huge fines, confiscation of assets or even jail time**. **This, not to mention the obvious harm in ensuring the basic, daily means of subsistence**. And to be noted that all such abusive laws and regulations of these systems of control and repression that have the capacity to affect all aspects of individual and social life, will not simply come from the UK Government, but, through the Government, directly from all the globalist institutions ruled by unelected leaders, that the UK has adhered to - such as the WHO (via the Pandemic Treaty and International Health Regulation), the Central Banks, IMF, UN etc. It is, sadly, very transparent that in this new, global system promoted by Tony Blair and Keir Starmer, **individual freedom, human rights and democracy will soon become, things of the past**.

We consider that not only the better, but in the actual complicated global circumstances, **the necessary solution for the identification of people, lies in the functional alternatives (that have previously existed), allowing access to essential services without a smart phone or access to the Internet.** In rest, the actual legislation in democratic countries, can manage the society, as long as it is really respected by the authorities themselves. It is clear that among the people of Britain, there is, definitely, a huge resistance to this rollout – **a petition against the introduction of Digital ID**[xi] on the government's website has gathered almost **3 million signatures** at the end of October 2025. If the citizens and residents of the UK would really understand the noted consequences of this roll-out, we believe that all who have no vested interests in the system, would firmly oppose it.

Finally, it is important to add here that **the entire wireless structure, from the mobile phone and wi-fi routers to small cells, masts and satellites and all associated technology,** though necessary for surveillance and military operations (which, in fact, are not desired by the common people of any nation) **has, in fact, a very destructive effect on health and life, and greatly disturbs the ecosystems and the natural processes of the earth**. Thus, **not only the Digital ID, CBDC, Social and Credit Scores and all AI based governance, but the very technological infrastructure of all these systems is a very dangerous antagonist to natural law and life**. For your convenience, please see the document: **EXTREME DANGERS OF RF 4G,5G and 6G** https://tinyurl.com/mrwxntya

Now being informed on all this aspects regarding the problems associated with the imposition of any type of Digital ID, we ask you to please assume a public position that is aligned with the dignity of your official responsibility, with reason, with the imperative of conscience and with the necessary care and compassion for the people you represent and have to minister to. This document serves as a **Notice of Liability** for you and all the people in position of authority to claim or effectuate a change in this issue.

With hope and consideration,
