Assessing Implementation Post Install

Assessing your environment the proper way

We want to eliminate as many of the communication barriers as possible when it comes to assessing your environment. This allows us to move as fast as you are willing to move. You'll be given full access to our communication platform and project board.

This access will give you a direct line of communication to your project leader, access to files which you can upload and download, and a visualization of individual task statuses which

you can contribute directly to.

This ease of communication and transparency ensures tasks are done timely, questions are quickly responded to, and offers a full understanding of what is going on.

Implementation

Implementing what you want can be a nightmare for many. When it comes to physical hardware implementation, we don't ever go blind. Prior to any physical implementations, you would have already acquainted yourself with a local technician. Our technicians are qualified and well-seasoned installers, and during the assessment phase, one has already evaluated your current situation. We work closely with our installers to ensure the installation is done properly and in a timely manner, reducing down time and errors.

Professional install of all hardware and software

If your implementation doesn't require a physical install, we get to work on setting up your SaaS and PaaS environment ASAP! No waiting once you pull the trigger.

Post Install

We offer several post installation services that can be an addition to our consulting or for your current working environment. Administratively we work closely with your business and behind the scenes

assuring your SaaS and PaaS implementations are operating correctly.

We also offer a retention model that allows us to be your business' IT point of contact for any questions you may have regarding the solution we implemented. Any upgrades you may want to consider and any further recommendations we may have when new technology becomes available.
