The pressure transmitter DMK 456 has been developed for measuring the pressure in systems and the level in tanks and is certificated for shipbuilding and offshore applications.

Due robust stainless steel field housing and the possibility to use the device in intrinsic safe areas (temperature class T6) enable to measure the pressure of aggressive gases and fluids under extreme operating conditions. The basis for the DMK 456 is a capacitive ceramic sensor element designed by BD|SENSORS, which offers a high overload resistance and medium compatibility.

Preferred areas of use are

Monitoring of the pressure during loading and unloading processes

Monitoring of a ship's position and draught

Use in anti-heeling systems

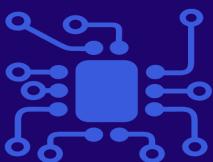

Level measurement in ballast and storage tanks

Monitoring of the internal pressure in liquid gas cargo tanks
