

Irrigation Leak Management

Simple. Practical. Effective

Clear insights. Immediate
action. Smarter irrigation

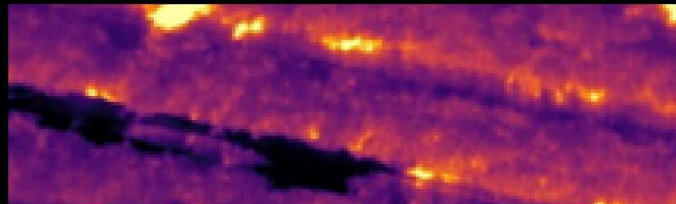

www.verasys.com.au

IRRIGATION PERFORMANCE SOLUTION

VeraSys technology keeps a close watch on irrigation systems, helping detect leaks early so farmers can save water and improve system reliability.

HOW IT WORKS ON YOUR FARM

Drone-based Thermal & Visual Imaging provides complete visibility across orchards in a very short time.

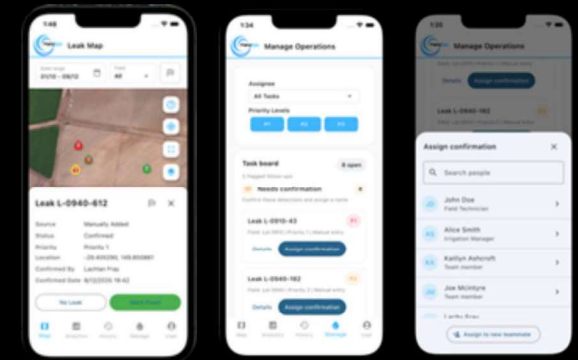

Machine Learning and AI processing is applied to pinpoint irrigation leaks and mark their exact location.

Problem identification and location is achieved swiftly but is only half the solution. The VeraSys Leak App provides the management efficiency.

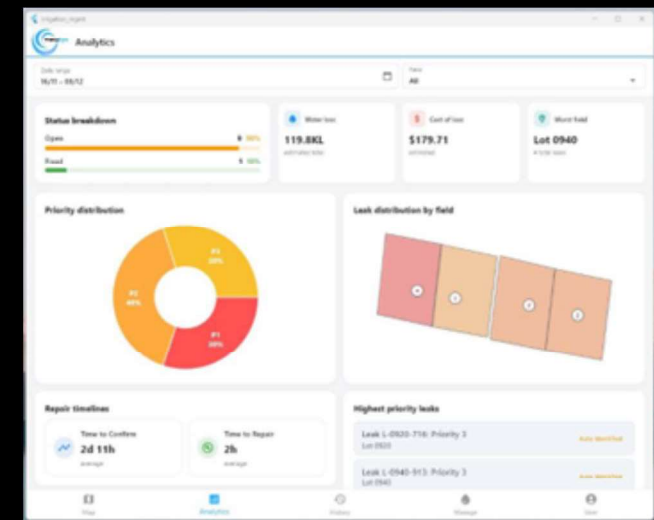

VERASYS LEAK MANAGEMENT APP

The VeraSys Leak App provides farmers a clear, real-time view of irrigation system status.

The App features work management functions to prioritise, assign repairs and monitor progress. With reporting and history analysis functions the App becomes an irrigators best friend.

Available in Android, iOS and Windows

THE SMARTER WAY FORWARD

- Reduce labour costs
- Reduce water Loss
- Increase crop productivity
- Manage irrigation maintenance effectively

*Partner with us to Build the Future
of Smart Farming*

WHY CHOOSE US?

VeraSys helps farmers obtain the best out of their irrigation and improve Farm performance by using Drone and AI technology coupled with an App management tool.

With clear and fast information at your fingertips, a method to prioritise problems quickly and manage repairs, the operating cost losses stemming for irrigation leaks become a thing of the past.

We take the time to understand each farm's operations, challenges, and goals. By working closely with you, we make sure every solution fits your operation, is practical to use, and supports long-term success on your farm.
