

Nutritional Oncology Research Institute

Nutritional Support Program

General Information

The Nutritional Support Program is designed specifically for cancer patients who have been recently diagnosed, are undergoing conventional treatment or wish to follow a natural approach to healing. The program may also be used for patients wishing to lower their risk of recurrence after treatment. Aspects of the program are adjusted for different stages of progression, age, weight and presence of other health conditions. Every aspect of the NORI Nutritional Support Program is meticulously researched and is completely based on solid scientific evidence.

The Nutritional Oncology Research Institute (NORI) cannot make any claims to be able to diagnose, treat or cure any disease since we do not use any FDA approved drugs or procedures. Our methods are purely natural and nutritional and do not fall within conventional oncology but may overlap with concepts within integrative oncology. The NORI approach is purely nutritional, nontoxic, natural and is in close alignment with naturopathic and holistic medicine.

In addition to nutritional support, the institute will provide guidance through the maze of alternative cancer therapies. Some alternative therapies such as hydrogen peroxide, ozone and oxidative therapies have merit and can be combined with the program. The Nutritional Oncology Research Institute believes strongly in holistic healing and will suggest various supportive lifestyle modifications and mind/body therapies.

What IS covered.....

All nutraceutical supplements necessary for the protocol. Shipping charges are included. Nutritional counseling services. Guidance and support on choosing treatment options. Explanation of test results. Guidance on various supportive options within natural and holistic medicine.

What IS NOT covered.....

Blood tests, scans, foods, other supplements not used within the protocol, intravenous nutritional infusions, any medical procedures, pharmaceutical drugs and over-the-counter medications.
