

## **The International Sustainability & Growth Summit 2021**

### **International Perspectives on Global Sustainability Solutions**

**2-4 September 2021 Dubai /UAE**

<https://iamacademiconference.com/>

With the unprecedented changes occurring in the world, the downfall in the economy, job markets and all types of industries, resulting in a great loss of lives, finance and consequently loss of motivation, there is a great need for vision, dialogue, new perspectives and reshaping new ways of adaptation in the post pandemic era.

The critical importance of sustainability has been further reinforced during the pandemic. While the year 2020 has taught us how truly fragile our world can be, it has also demonstrated the power we possess, when working together, to overcome global challenge.

The vision of The GUIDE is to develop a series of conferences and dialogues around the world under one platform for experts to discuss, innovate and to propose new perspectives for the advancement of business, society and professional self-development

This summit will gather some of the most influential leaders in the world including educationists, pioneer thinkers, and successful business leaders who are at the frontiers of advancement. It will cover the latest research findings, current practices, stories of success, and theoretical development in the fields of the 4 pillars of sustainability; **human, social, economic and the environmental domain.**

The Summit brings together a diverse group of people who are ready to trade and do business. The Summit offers lively conversations and generates rich networking opportunities while providing inspiring opportunities in leadership, entrepreneurship, and respect for culture.

The TISGS Award for Sustainability and Growth Excellence 2021 is birthed to honor and celebrate some outstanding key players, companies, corporations and individuals that have contributed to the mission and vision of the GUIDE and have been at the forefront of ensuring economic growth, international unity whilst strengthening bilateral relationship and promoting trade and investments

**Our aim is to provide participants and the audience with the opportunity to:**

- Hear from global decision makers on delivering a green recovery in a post-COVID-19 world
- Learn how technology is accelerating sustainable development through Artificial Intelligence, energy transformation and resource management
- Network virtually and in person with sustainability leaders from across the world
- Understand how business industry is adapting to global challenges
- Identify opportunities for business growth
