2024 **CHICAGO
HEMODYNAMIC
FORUM**

FRIDAY
Nov. 15, 2024

OVERVIEW

The Chicago Hemodynamic Forum was established to initiate a national conversation about standardization of right heart catheterization. The goal of this conference is to discuss best practices in hemodynamic assessment and interpretation across the spectrum of cardiovascular disease processes.

The Chicago Hemodynamic Forum will present a national conference solely focused on invasive hemodynamics! Come join the discussion on hemodynamic nuances of heart failure across the EF spectrum, pulmonary hypertension, cardiogenic shock, exercise hemodynamics, continuous remote monitoring, LVADs, and more. Learn the most up-to-date understanding of invasive cardiovascular physiology from experts in the field.

TARGET AUDIENCE

The Chicago Hemodynamic Forum has been designed to meet the educational needs of Heart Failure, Interventional, Critical Care, and General Cardiologists, along with Associated Advanced Practice Providers, Nurses, and Trainees.

This activity has been approved for *AMA PRA Category 1 Credits™*

LOCATION

CONVENE

333 North Green Street
Fulton Market District, Chicago, IL

Trainees and students, try to stump the experts with your challenging hemodynamic case! Submit a short case in which invasive hemodynamic assessment was key to accurate diagnosis and/or management of a patient. The top 5 submissions will be chosen to present to our judges during the case competition at the Chicago Hemodynamic Forum on November 15, 2024. The most challenging case will be chosen by our expert panel! All presentations will have the opportunity for a fast-track submission process* in the "Under Pressure" or "Images & Case Reports" section of Circulation: Heart Failure!

*Fast-track submission does not guarantee publication, as all submissions will need to undergo peer review
