Procedure revision date: 01/7/2021

Transmission Fluid Level Check

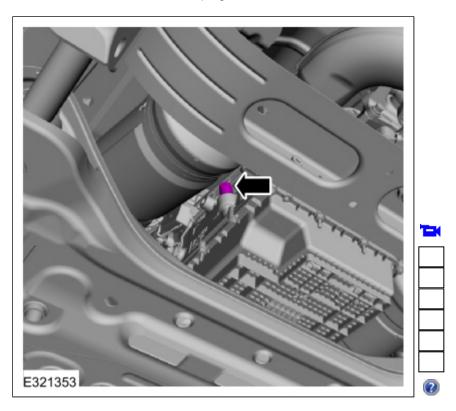

Check

NOTICE: The vehicle should not be driven if the transmission fluid level is low. Internal failure could result.

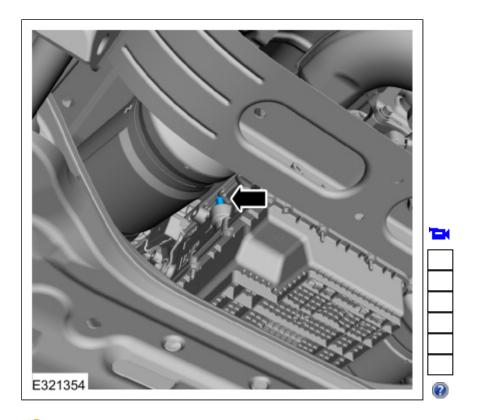

NOTE: If the vehicle has been operated for an extended period at high highway speeds, in city traffic, during hot weather or while pulling a trailer, the transmission fluid must cool down to obtain an accurate reading.

NOTE: If a new transmission fluid cooler or new fluid cooler tubes have been installed, drive the vehicle to warm the transmission fluid to 96°C-101°C (206°F-215°F) in order to purge the air from the transmission fluid cooling system.

- Connect the diagnostic scan tool and position the vehicle on a hoist.
 Refer to: <u>Jacking and Lifting 3.5L Duratec (202kW/275PS)/3.5L EcoBoost (235kW/320PS) Overview</u> (100-02 Jacking and Lifting, Description and Operation).
- 2. With the engine running, place the transmission selector lever in each gear position, holding approximately 5 seconds in each position. Place the transmission selector lever in PARK.
- 3. Remove the transmission fluid fill plug.

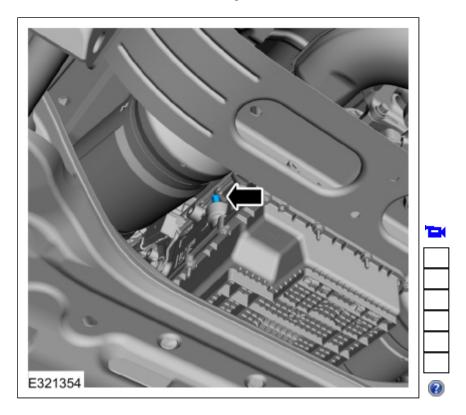

4. Remove the transmission fluid level indicator from the transmission.

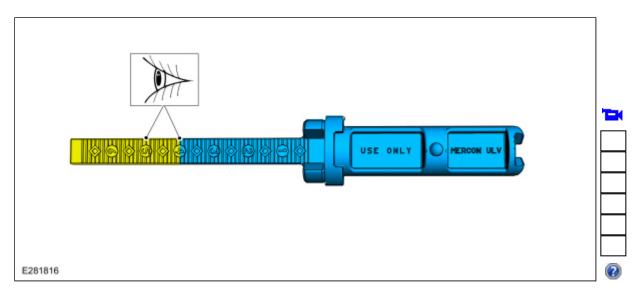

Check the transmission fluid level using the transmission fluid level indicator.

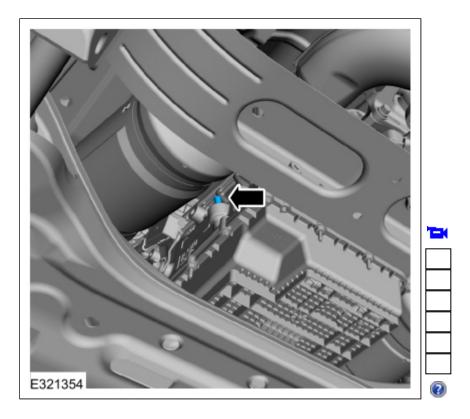

6. **NOTE:** The transmission fluid level indicator uses 1 through 6 to indicate the fluid level. The different numbers are for different vehicle models. Use the area between 4 and 5 when checking the transmission fluid level. The correct transmission fluid level is between 4 and 5 on the transmission fluid level indicator.

NOTE: Do not overfill the transmission.

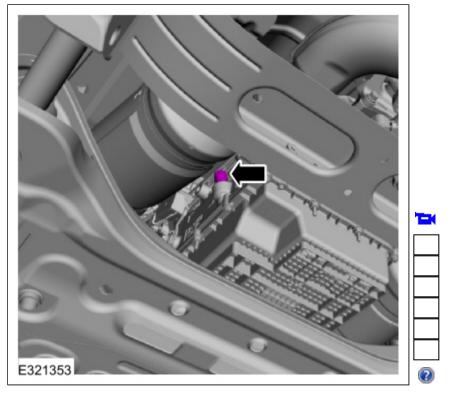

Using the scan tool verify the transmission fluid temperature is between 96°C - 101°C (206°F - 215°F). The transmission fluid level must be between 4 and 5 on the transmission fluid level indicator.

- 7. If the transmission fluid is not at the correct level, follow the steps for adding or removing transmission fluid. Refer to: <u>Transmission Fluid Drain and Refill</u> (307-01 Automatic Transmission 10-Speed Automatic Transmission 10R80, General Procedures).
- 8. Install the transmission fluid level indicator.

9. Install the transmission fluid fill plug. *Torque*: 35 lb.ft (47 Nm)
