**Subject:** Ford Remote Battery Optional Removal / Install Process  
**Bulletin #:** D20-05

---

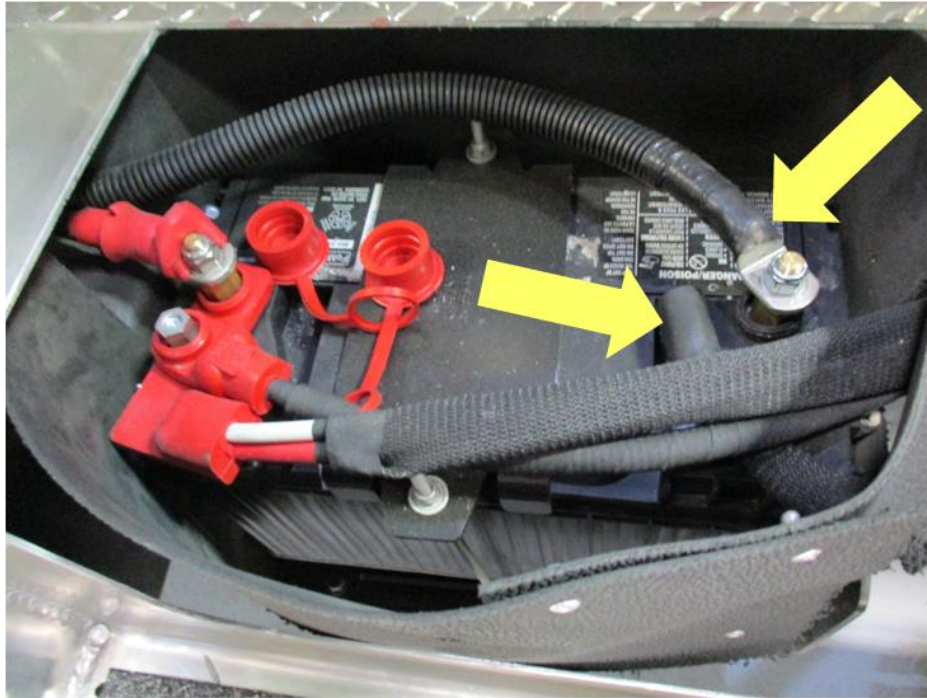

The purpose of this bulletin is to offer an optional process to remove or install the remote mounted battery in the Ford F59 Chassis based PKG cars with a Morgan Olson Body. Always follow proper Safe Work Methods and PPE while performing repairs.

## Gather Required Tools

## Disconnect Grounds

Disconnect both cable grounds at the main battery in the step well.

## Accessing Rear Battery

Using Flat Head Screwdriver loosen the fasteners in cover plate. Then use flat part to help flip up cover.

## Remove Battery Cables

You are now ready to remove Cables. Start with Negative Cable First.

Using 9/16<sup>th</sup> wrench remove nuts from Battery terminals

After removing nuts keep control of cables

Insulate battery terminals with electrical tape to prevent accidental contact while removing the battery

## Removing Battery Tie Down

Use 7/16<sup>th</sup> wrench to loosen both nuts on tie down bracket

Remove one nut from either side so bracket can be turned out of the way

## Battery Removal

Utilizing strap, run one end through loop at other end as pictured

Place large looped strap around battery and tighten down

Now turn battery on end while ensuring strap is tight and Battery secured

Carefully pull battery through floor opening

### **Installing New Battery**

Reverse Order of removal procedure.

1. Place strap on new battery, turn on end and lower into compartment.
2. Turn battery to sit flat on bracket. Remove Strap.
3. Re-install Battery Hold down bracket.
4. Remove tape.
5. Connect cables to remote battery
6. Replace access cover.
7. Connect main battery grounds.
