new ideas in mechanization

Use of Nano Technology

SATYAM'S

Technology & Digitization

QR Code based reporting system

Real time reporting

Customized Dashboards

Inhouse capability of software development for site reporting

SATYAM'S

Sustainability and Environment protection

- We are a responsible organization and ensure that we introduce and follow all the latest norms to ensure safety of the environment at our client sites and help them to reduce their carbon footprint
- Use of Biodegradable green certified chemicals
- Minimal use of chemicals
- Disposal as per law
- Disposal of used chemicals in STP drains only
- Use of recyclable materials wherever possible
- Composting of solid green and wet waste wherever possible and using the same for horticulture
- Use and maintenance of Mechanized composting units
- Waterless Urinals maintenance and saving of water
- With the end of single use plastics, coming up with new ideas to ensure that work does not get hampered
- Use of anaerobic reactors for water treatment wherever possible and its use for horticulture
- Helping with tree plantation drives

SATYAM'S

Upcycling of waste

- While all of us talk about recycling hardly anyone talk about upcycling
- While recycling ensure that the used product is put through a process were some of it get lost and creates waste
- We can help with proper segregation and tie up with people who are using waste materials to create interesting products thus creating value. This is upcycling
- Like used paper for envelopes, newspaper for paper bags, glass and plastic bottles as planters and so on.
- This would again help in environment protection and also reuse of the products without the use of high energy ensuring lower carbon footprint

SATYAM'S

New Ideas in Mechanization

- Use of upright vacuums for carpet cleaning, therefore ensuring pile brushing and lifting and better dust pickup
- Steam cleaners for sanitization which has become very important after Covid
- Battery operated handheld machines for washroom cleaning, they can reach areas which remained untouched earlier
- Use of prewet systems but which are more economical to use and implement at sites
- Use of small walk behind scrubber driers 10 to 15 liters which are battery operated. They can do away with regular mopping and sanitize and clean better

SATYAM'S

Nano Technology

- Nano technology has made lot of progress and especially in cleaning
- The lotus leaf effect has many uses in the cleaning industry
- Nano coatings on washbasins, faucets can ensure that hard water does not stick to these surfaces and therefore the products can last longer, saving high capex
- Similar sprays and coatings on carpet can ensure less spotting and easier cleaning
- Glass coated with nano coatings would ensure that neither dust nor water sticks to the façade areas ensuring lesser cleaning frequency and easier cleaning

SATYAM'S

Specialized services

Cold thermographic painting of bollards, curbstones, directional signages on roads with reflective glass beads

Swimming pool cleaning

Glass Scratch Removal

Waterproofing and Seepage correction

Painting services

Building and home sewage line clearance
