

Tank & Equipment Hauling

Total trucking solutions

Unmatched capabilities: We are experts in transporting difficult loads safely and efficiently to their desired destination

W&W Energy Services use a fleet of specialist trucks, trailers, knuckle booms, bucket-trucks and pilot cars to safely and efficiently meet all our clients' hauling needs – significantly improving transport costs and delivery times across the Permian Basin.

We never compromise on safety, whether it is our Compliance Safety Accountability score or driver behavior, safety is a fundamental part of our business culture. We expertly haul tanks (up to 1,000 barrels in size), vessels, production surface equipment, heavy machinery, heater treaters and tubulars. We also use our fleet to efficiently haul pipeline spreads from site to site to reduce job mobilization time and cost.

No matter what type of facility equipment or load you may have, you can transport with us. Our team of highly trained and experienced professionals utilizes technologically advanced heavy hauling trucks and knuckle boom crane trucks to load and deliver your cargo in a fraction of the time of conventional trucks and cranes. We run haul trucks in tandem and customize our services to exactly match your needs.

ENHANCED SAFETY

- > Experienced, trained and certified drivers
- > Well-equipped and maintained fleet
- > Oversize and permit load specialists
- > Knuckle boom crane trucks safely haul, lift and set
- > GPS tracking and electronic log books
