

911 EXPLORATION CORP – EXPLORATION UPDATES

DATE: April 7th, 2023

PROPERTY: Star of the West

LOCATION: Zone 10, 371898N, 5437541E

COMPANY: Kermode Resources Ltd

DETAILS

On Friday, April 7th we preformed detailed prospecting for the areas around and directly on Roberts Main Logging Road, at the Star of the West property. Various outcrops, logging spurs and creeks along Roberts Main were searched for mineralization. A 200m+ wide zone of skarn was found in an old quarry along the road located at Zone 10, 371898N, 5437541E.

Shear zone, skarn and quartz vein hosted mineralization was found in the old quarry and in a creek 100m away. Twenty samples were taken total. Two samples from the creek, a bedrock sample, and a float sample were taken. The float sample was massive chalcopryrite. In the quarry 13 samples were taken from separate shears, skarn lenses, quartz veins and five float samples from small boulders of massive sulphides including chalcopryrite, pyrite, magnetite and bornite.

Many samples taken from 14 different bedrock showings over a 200m+ width shows another prospective mineralized zone at the Star of the West Property. These showings up to this point are undocumented.
