

**Welcome to your
Reclaim Campaign
You are in the
Right Place, at the
Right Time**

President Trump has made his intention for American Energy clear in his official Republican Platform that you can view here <https://www.donaldjtrump.com/platform>

HOWEVER, certain politicians have a very different plan, completely contradicting the Presidents direction. The **Regulated Electric Utility** lobby as well as well meaning but ignorant politicians will introduce the largest ever increase in electric utility rates in US History (\$9 billion). Think of how this will impact Floridians on a fixed income, already battered by sky rocketing insurance rates. This is unacceptable, unjust and avoidable. Its time to Reclaim Your Energy.

More information from the Reclaim Conference

1. Unleash American Energy

Page 7 <https://www.donaldjtrump.com/platform>

Under President Trump, the U.S. became the Number One Producer of Oil and Natural Gas in the World — and we will soon be again by lifting restrictions on American Energy Production and terminating the **Socialist Green New Deal**. Republicans will unleash Energy Production from all sources, including nuclear, to immediately slash Inflation and power American homes, cars, and factories with reliable, abundant, and affordable Energy.

⚠️ Florida's Energy Crisis: What Every Citizen Needs to Know

Presented by Dave Walsh | Reclaim Campaign Conference, July 26, 2025

🔧 What's Happening?

- Florida's electric utilities (FPL, Duke, TECO) have spent **billions** building **solar farms** that produce power only 23% of the day, and, only at the same 9:00 AM to 4:30 PM time of the day.
- Since 2020, they've shifted to **solar-only investments**, abandoning investment in base load, dispatchable new diverse sources like natural gas and nuclear.
- This strategy creates **energy shortages** and **record-breaking rate increases**—hurting everyone, especially fixed-income families.

📊 The Consequences

- **Electric bills up 42%** since 2016 (Duke Energy, Central FL region)
- FPL is proposing a **\$9 billion rate increase** (largest ever in U.S. history)

- **Projected 40% rate hike** across FPL territory in the next 4 years
 - Solar plants cost **5 to 6 times** on an energy basis more than traditional dispatchable powerplants to build
 - Solar farms only produce power from **9:30 AM to 4:30 PM**—not during peak demand (evenings & early mornings)
 - Utilities are **not building** natural gas or nuclear plants—just more solar
-

Why Is This Happening?

- Utilities make % **11.4% guaranteed profit** on every dollar spent (capital expenditure)
 - Solar farms are **massive capital projects**, driving up profits—even if they're inefficient
 - Over **300,000 acres** of Florida land are slated to be consumed by solar farms
 - **86% of solar and battery storage hardware is sourced from China**—making us energy-dependent on a foreign adversary
-

Who's Enabling It?

- The **Florida Public Service Commission**, appointed by the governor, approves every rate hike
 - Utilities are **top political donors** in Florida, influencing legislation and regulation
 - State leaders have failed to demand a **diverse energy mix**
-

Real-World Impact

- Seniors, working families, and small businesses are being **priced out** of reliable electricity
 - Rolling shortages are starting to appear—utilities are asking customers to **run appliances at night**
 - This is the **intentional creation of energy poverty** under the banner of “green energy”
-

What You Can Do

1. **Take Action Now** – Email the Florida Public Service Commission:

 clerk@psc.state.fl.us

 Mention Docket Number: **20250151**

2. **Tell Lawmakers** – Ask your State House, Senate, and Governor candidates:

- Why are you allowing monopoly utilities to destroy affordable power?
- Will you support banning campaign donations from regulated utilities?

3. **Spread the Word**

- Follow & share: [@DaveWalshEnergy](#)
- Share ReclaimCampaign.com with friends, family, churches, and networks
- Host a house party or town hall to raise awareness

 So called “Clean Energy” ≠ Smart Energy

We all want cleaner energy. But not at the cost of reliability, affordability, and sovereignty.
Florida needs a **balanced, dependable, and citizen-first energy policy**—before it’s too late.

The Coming \$9 Billion Energy Utility Rate Hike
