BarTender® Track & Trace™
Say goodbye to asset and inventory chaos

Organize, automate, and optimize your operations—regardless of industry or business size. BarTender Track & Trace delivers intuitive, item-level tracking tools to eliminate delays, losses, and unplanned costs within your daily operations.

Affordable, easy-to-implement solution to asset chaos:

Hours to minutes
The reduction of time spent searching for important assets

95%+
tracked inventory and asset accuracy

30%+
reduction in wasted, unnecessary replacement of lost or missing assets

45%
reduction in auditing and reporting time and effort

Reduce time searching for assets

Teams across virtually every industry spend countless hours—or even days—searching for tools, equipment, or other materials, wasting expensive human resources and robbing productivity.

Minimize service delays

With less time wasted searching for assets and inventory, your team can better serve your customers and partners, improving overall customer satisfaction and minimizing delays.

Waste less on asset replacements

Only invest in new assets or leases when replacements are truly needed—not because assets went "missing."
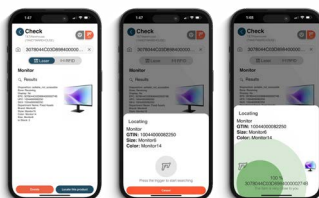

Cut total asset losses

Accurate tracking and timely reconciliation ensure assets return where they belong, reducing expensive losses and keeping operations running smoothly.

Lower operational and compliance risk

Accurate asset and inventory reporting and insights empower you to optimize business operations, comply with regulatory guidelines, and avoid overpaying on taxes.

Eliminate the paperwork

Get rid of error-prone, manual processes that come with managing spreadsheets and fragmented business systems.

From label to locate

Use RFID labels, best printed with BarTender, to scan into Track & Trace and take advantage of advanced RFID location capabilities. Intuitive "geiger counter" visual and audible assist on mobile devices and RFID handheld scanners significantly cuts the time required to quickly locate the exact asset you need.

Unlock newfound visibility that transforms your operations

- **Streamlined asset & inventory receiving**
Receive RFID- or barcode-labeled items with blind or ASN (EPC & SKU) receiving to accelerate intake and reduce manual errors.

- **High-accuracy cycle counts**
Perform rapid, zone-based inventory counts with over 98% accuracy to eliminate lost, missing, or misplaced items.

- **Enhanced picklist management**
Create, share, and fulfill picklists efficiently using integrated search functions that ensure fast, accurate retrieval.

- **Item-level visibility**
Instantly view interactive maps showing tagged items' last seen location, position, and status by scanning a unique identifier.

- **Seamless item movement & reallocation**
Transfer assets between zones while updating their location, status, and association.

- **Precise RFID item location**
Use RFID handhelds with "Geiger counter"-style audio/visual cues to zero in on hard-to-find items quickly and accurately.

- **Audit-ready compliance tracking**
Maintain full traceability with movement logs and location history to support compliance and audit readiness.

- **Insightful reporting & asset utilization**
Make smarter purchasing and disposal decisions with usage trends, asset lifecycle data, and actionable reporting.
