Prestige Mouldings Catalogue 2026

Facade, Moulding & Stuccowork Collection

ABOUT US

Prestige Mouldings is dedicated to manufacturing and supplying the highest quality decorative parts for your home.

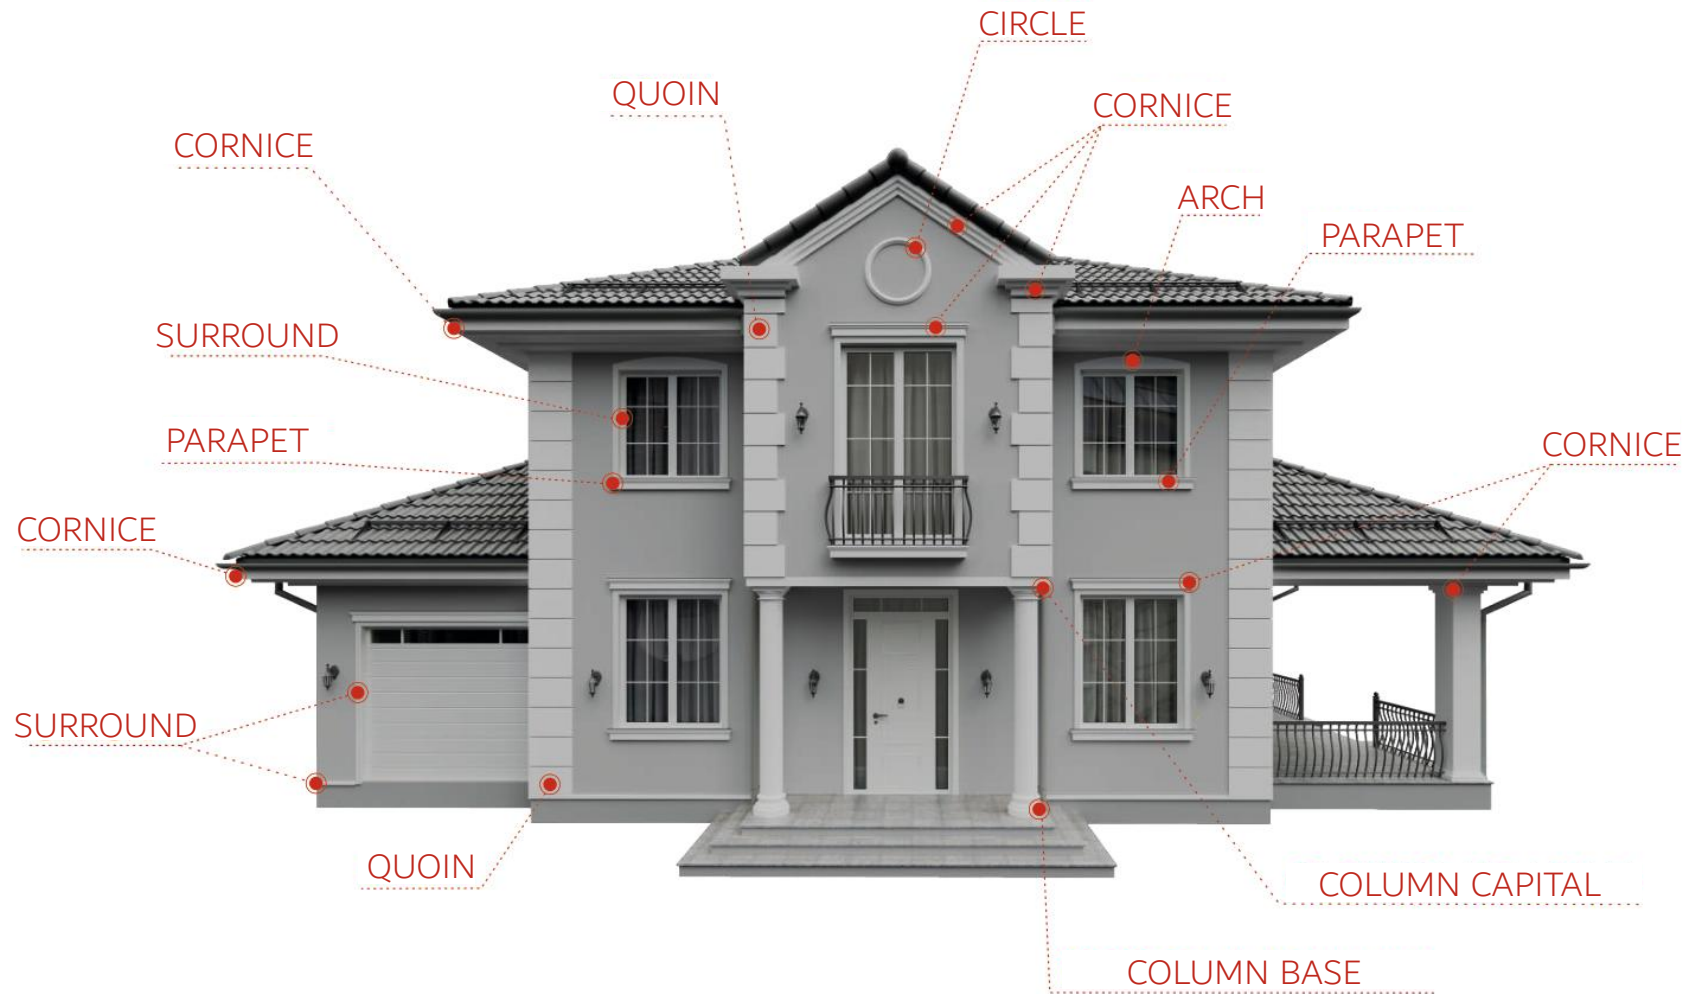

Many years of experience in supplying facade moulding profiles guarantees the highest standard of products.

The Prestige Mouldings range includes: window casings, cornices, windowsill mouldings, pilasters, keystones, brackets, rustications, quoins, and column capitals.

Our facade profiles are made from elevated density polystyrene foam, reinforced with fibreglass net, and coated with dry set mortar resistant to weather conditions. All materials used in the manufacturing process are fully certified. For your convenience, we manufacture strips in 1.2 m and 2 m lengths to minimise installation time and reduce your costs.

We can manufacture any pattern to your specification. Simply provide your design or dimensions and we will do the rest.

3D ELEMENTS

We offer a variety of 3D decorative elements, produced to order

Installation Manual

Before installation, carefully read the instruction manual.

Façade profiles are elements used to provide an attractive finishing for façades, as well as window and door openings. Our products are made of polystyrene of EPS 200 hardness degree, reinforced with a glass fibre mesh, covered with a joint mortar resistant to external weather conditions. The structure of the profiles facilitates precise processing and fitting during installation using simple tools. Façade profiles may be used for decoration purposes only—they may not carry any structural loads. Until installation, profiles must be stored in a dry room, on a flat surface, in places protected against sunlight. Recommended installation temperature is 5–30°C Standard lengths of profiles are 1.20 m or 2 m.

Installation of façade profiles

1. Façade strips are glued to a prepared surfaces (levelled, cleaned) using highly flexible adhesive for polystyrene, e.g., Caparol 190.

-Adhesive must be distributed evenly on the adhesion surface using a notched trowel in a system similar to systems used to glue glaze or gres tiles.

-Apply the profile to the wall and move the profile in a vertical plane by gently pressing it to distribute the adhesive on the entire area of adhesion and to adapt the line of the glued elements.

-Secure the profile against sliding on a wet adhesive by nailing it to the surface in a place easily accessible for skimming (after the adhesive binds, remove the nails and fill the cavities with spackle adhesive).

NOTE

PROFILES OF LARGE OVERALL DIMENSIONS MUST BE ADDITIONALLY SECURED BY FIXED DOWELLING USING DOWELS FOR QUICK INSTALLATION OR FOR FIXING OF POLYSTYRENE

2. The external edges of the profiles (joints of 2 connected profiles) during installation remain unglued for approx. 12 hours with 4–5 mm gaps between them. After 12 hours, fill the gap with polyurethane adhesive (in a foam) used to glue polystyrene, e.g., Tytan EOS. After the fill hardens, cut the excessive foam, leaving the external layer for skimming.

3. Skim the gap using flexible filling mass, e.g., Caparol Capalith Feinspachtel or Caparol 134CT Modellier.

4. Joints between the profiles must be ground using sandpaper of 40–60 grit until the surface becomes monolithic. The profiles prepared this way on a wall are ready for application of a surface layer—a primer, paint or any plaster.

NOTE

CUT THE PROFILES TO LENGTH AND AT AN ANGLE USING A MECHANICAL CIRCULAR SAW FOR STONE OR A MANUAL SAW FOR CONCRETE.

Painting of profiles

1.The surface layers of the profiles are fit for direct coating. Before coating, it is necessary to prime the strips using a primer required by the manufacturer of the topcoat paint (except for paints combined with a priming agent).

2.The profiles must be coated using only façade paints resistant to weather conditions and of very high flexibility degree. Suggested paints:

- Caparol 518 DISCBOCRET Flex-finish (high quality flexible paint, covering scratches and cracks, protecting against UV),
- Caparol Permasilan (flexible silicone façade paint)

This instruction manual is only a guide providing an assistance during installation and processing of the profiles. The manufacturer will not be liable and will not accept any complaints for effects resulting from incompetent installation and finishing of the façade profiles.
