

ON Gauge Materials: ON Type R Gauges - the "R" is for recycled, as in 100% recycled HDPE plastic. Only the title plaque insert, at the tops of the gauges, are made with first generation polymer. This material is manufactured in a 2" x 10" lumber profile, (actual size is 1.5" x 9.5"). **ON Type F gauges** are made from first generation sheet material, the same as that used on our number signs but thicker at .750" thick. The "F" refers to flexibility in gauge widths and lengths. Four widths are offered and lengths are unlimited by joining sequential sections at installation.

ON Gauge Fabrication: Both **ON** Types "R" and Type "F" are manufactured using CNC machining so that accuracy is "built-in". Standard graduation marks are equal to 1/10th foot and are done in the industry standard for style E numbers and graduations. **ON** gauges can be ordered and made 1 at a time or 100 at a time and **EACH CAN HAVE A DIFFERENT NUMBER RANGE**. All **ON** gauges come standard with a title plaque insert at the top to show the owner or property abbreviation. The white and black colors are compounded in the materials by the manufacturers so there is no vinyl, paint, epoxy or printing to be eroded away.

ON Gauges In-Use: **ON** Type R gauges are being used by the largest water management district in Florida with nearly 1000 gauges installed throughout the Kissimmee River basin and the Florida Everglades. Both **ON** Types R and F have also been installed on projects for the USACE.

OutdoorNumbers.com offers two staff gauge product types: Type F and Type R ♻️

ON TYPE F

ON TYPE R ♻️

USES IN THE MARINA ENVIRONMENT

- To indicate tide level changes
- To show water depth at high traffic spots like fuel docks and hoist basins
- To visually display any height or clearance distance
