

Cultural tips for the successful grower

Boyne Raspberry

Boyne: was developed in Morden Manitoba and introduced in 1960. Boyne has medium sized, tender, juicy, dark red berries with a sweet aromatic flavor. These berries are especially good for jams, jellies, and freezing. Boyne is a very productive bush, with strong, sturdy canes, growing to a Height of 5 to 5 ½ feet. Boyne was adapted for fruit stand sales, pick your own, and the home edible gardener. Ripens in early-midseason. Zones 2-7

Planting Instructions - Raspberries can be planted in almost any sort of well-drained soil. Start by digging a large hole big enough to encompass all of the roots of the plant without bending or circling. Raspberries should be planted in the spring. They are usually spaced 2-3 feet in the row with 8-10 feet between the rows. Plant raspberries about one inch deeper than the plant grew in the nursery. The plant, as purchased from the nursery, may be cut back to a few inches as most of the growth will arise from the roots or from the base of the planted cane. Any white sprouts arising from the crown should be covered with soil to prevent burning by the sun.

Variety	Zone	Season	Fruit Size	Classification	Exposure	Flavor	Spacing
Spring Crop	 2-7	June - July 	Medium	Rubus Idaeus	Full Sun 	Aromatic Rich Sweet	2-3 Feet
