LIKE A PLANE CRASH EVERYDAY

WHO – WHO WE ARE

Fentanyl Fathers is a non-profit working to educate kids and warn communities about the dangers of fentanyl and counterfeit pills for High Schoolers and Middle Schoolers through the lens of bereaved parents. Our goal is to spare families from waking up to the same grief we share in every day.

Mission:

To establish a world where no adolescent succumbs to fentanyl poisoning or overdose, by raising awareness about the dangers of fentanyl, counterfeit pills, and effective overdose response measures.

FATHERS**

THE NUMBERS

High school-aged overdose deaths rose by **114%** starting in 2020.

Fentanyl accounted for **77%** of those deaths.

Among adolescent overdose decedents (ages 10 to 19) *only 35% of them had previous opioid use history*, yet **90%** of deaths were opioid related.

**COUNTERFEIT PILLS OFTEN CONTAIN
FENTANYL AND ARE MORE LETHAL
THAN EVER BEFORE**

COUNTERFEIT PILLS

Mass produced by criminal drug networks

Most contain Fentanyl, a synthetic opioid that is 50x more potent than heroin and 100x more potent than morphine

Easy to purchase, widely available

Sold on social media and e-commerce platforms like **Snapchat**.

Tracking Fentanyl's deadly path from China to Mexico to ODs in America

China Fentanyl Sales

Members of drug cartels pick up precursor chemicals from China and transport them to makeshift labs where fentanyl is produced.

A chemist for the Sinaloa Cartel prepares a mixture of synthetic heroin, used to make fentanyl pills, at a safe house in Culiacán, Sinaloa state, Mexico.

With 200,000 vehicles crossing the Mexico/US border each day, it's sometimes easy for the deadly cargo to slip through.

Fentanyl's gets it's start as a powder in China and makes it's way to Mexico to get further refined. It then makes it's way over the border into major hub cities in the United States.

Street dealers make approximately \$2 for each \$10 bag of fentanyl that they sell to their customers.

Results: 500,000 young Americans dead since 2019.

NALOXONE IN THE BRAIN

Naloxone Reversing An Overdose

Naloxone has a stronger affinity to the opioid receptors than opioids, so it knocks the opioids off the receptors for a short time (30-90 minutes). This allows the person to breathe again and reverse the overdose.

Source: Alliance of Coalitions

NALOXONE IN ACTION

Works on ANY opiate ANY time

Reverses opiate effects- sedation and respiratory depression

Causes sudden withdrawal – an unpleasant experience

No contraindications for use in the event of a suspected overdose

Routinely used by EMS (often in larger doses)

There will be no effect on the individual if an opiate is not present

SIGNS OF OPIOID OVERDOSE

- 

Pinpoint pupils
- 

Unconsciousness
- 

Shallow/slow Breathing
- 

Pale skin
- 

Blue lips
- 

Snoring/rasping breath

STEPS TO ADMINISTERING NASAL NALOXONE

Step 1: Call 9-1-1

Request EMS or fire department

Law 768.13 “**Good Samaritan Act**”

(3) As used in this section:

(d) “Who participates in emergency response activities...is not liable for any civil damages” means reporting a drug overdose or other medical emergency to law enforcement, the 9-1-1 system, a poison control center, or medical provider, or assisting someone in reporting a drug overdose or other medical emergency.

Source: Alliance of Coalitions

STEPS TO ADMINISTERING NASAL NALOXONE

Step 2: **Assess Situation**

Do not disturb the area

Check consciousness

Source: Alliance of Coalitions

STEPS TO ADMINISTERING NASAL NALOXONE

Step 3: Give Nasal Naloxone

Remove 1 – 4mg dose of the
Nasal Narcan, or 8mg dose of Nasal
Kloxxado

Tilt individual's head back

Dispense dose as directed into 1 nostril

STEPS TO ADMINISTERING NASAL NALOXONE

Step 4: Possible 2nd Dose

Wait 3 minutes

If no change in victim's condition,
administer the second dose in the
opposite nostril

STEPS TO ADMINISTERING NASAL NALOXONE

Step 5: **Withdrawal**

Place individual on their side
in the recovery position (left side)

Possible vomiting, diarrhea,
and/or sweating

Possible agitated behavior

Pill Roulette

Health Belief Model

Analysis constructs

- **Perceived severity** of consequences from fentanyl use
 - **Perceived susceptibility** to OD
 - **Perceived benefit** to drug abstinence
 - **Perceived barriers** to naloxone
 - **Self efficacy** to recognize an OD
 - **Self efficacy** to respond to OD
 - **Knowledge** about fentanyl
- **Signs of an OD + Save-a-Life kits act as **Cue to Action**

Survey Purpose: Theory based programming - MEASURE to MANAGE.

Measure perceived benefit to **DRUG ABSTINENCE**, **SELF EFFICACY** to recognize and respond to an OD / Poisoning.

FREE PDF book: [1001 Great Comebacks to Peer Pressure](#) =>

Conclusions: Applying the Health Belief Model and bereaved-parent testimony, this school-based overdose prevention program demonstrated **notable attitude changes** among adolescents. Theory-guided public health interventions forecast engagement with preventive behaviors that are more likely to yield **significant behavioral shifts** in addressing drug misuse, and fentanyl-related overdoses for school-aged populations.
