

In geometry, a line goes on indefinitely in both directions, so that when we talk about a line it is often a line segment we are referring to.

There are several terms that describe lines in mathematics, like

Straight lines

Curved lines

Wavy lines

Parallel lines

Perpendicular lines

Oblique or slanted lines

Horizontal lines

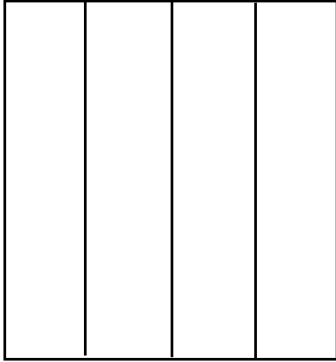

Vertical lines

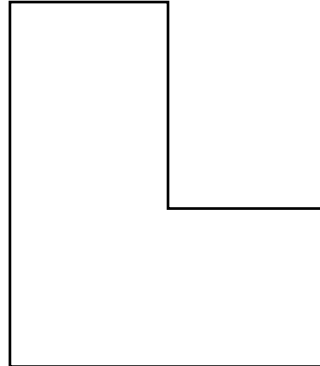

In the following pictures, trace over...

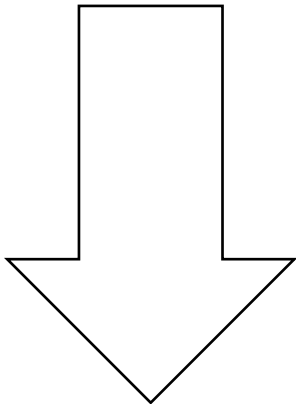

A pair of parallel lines in blue

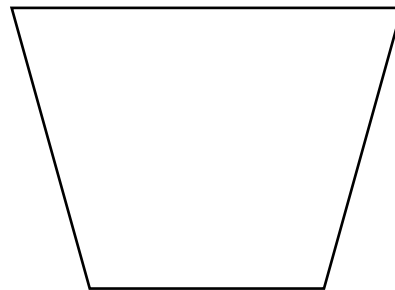

A pair of perpendicular lines in red

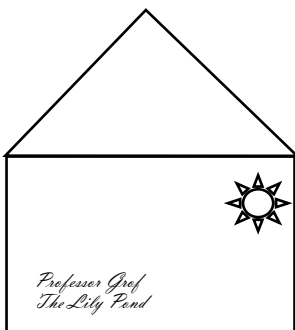

Oblique lines in green

Horizontal lines in orange

Vertical lines in purple

Curved lines in yellow
