MODEM SETUP guide AT 0060

We recommend using GiffGaff simcards. These are the only ones we support or recommend, all others are at owners risk and may or may not work.

Install modem with sim card installed and wait for green light to do a double or single flash every 3-4 seconds then plug in controller cable
ANDROID
Register sim card
Save number into phone
Send text message   2g
A response will come back with provider, signal and mode

Download autoterm control sms app
App will launch in Russian
3 dots top right of screen
Bottom box to change to English
On the same screen at the top click THE PRODUCT
(room) add modem simcard number as +447*********
(name) can be anything you want to use as a name for the heater
Option of heater type below
Binar 5s
Binar 5
Planar
14tc
Select correct option for heater installed
SAVE
Navigate back to main screen
SETTINGS- can be changed to the parameters that you want the heater to work on and this is also where the temperature/power level can be changed remotely.
SAVE (a text will be written and is to be sent)
press start and send text to start the heater.

Now this is complete and responding correctly and admin number can be set up
Send text message to heater number stored in phone
admin+447********* this needs to be the number of the phone wanting to be used to operate the heater remotely
if you would like to add more that one phone to the modem you can send
add+44********* from the admin phone number.
