**Since the global COVID-19 coronavirus outbreak, UV-C lighting has become one of the global chief weapons in fighting both COVID-19 and other pathogens.**

**HOW IT WORKS:**

Just slowly pass any item between the two 12-inch 8 watt UV-C 254nm lights to inactivate all viruses and kill 99.9% bacteria and germs.

UVC-254 nm light inactivates 99% viruses, bacteria, mold and spores. According to experts from:

University of British Columbia, University of Alberta, University of Colorado Boulder and Trojan Technologies, UV-C light is capable of killing tuberculosis, e.coli, methicillin-resistant S. aureus (MRSA) and more. This sanitation method relies on the UV-C spectrum, i.e. UV-C rays within the range of 200 nm to 280 nm, to deactivate the cellular ribonucleic acid (RNA) and deoxyribonucleic acid (DNA), as well as the reproductive capabilities of microorganisms. This result in eradication of the microbe, as it cannot multiply and infect other hosts.

Multipass is Patent Pending. Multipass is trademark protected.
