Alvarado Gold

Our Products

Precious Metals ("PMs"): Gold and Silver

Platinum Group Metals ("PGMs"): Platinum, Rhodium and Iridium

| | |
|--|---|
| 46 Pd Palladium | 47 Ag Silver |
| 78 Pt Platinum | 79 Au Gold |

Untapped Legacy: Unlocking PMs & PGMs Fortunes

- 
- For over a century, miners at Alvarado pursued only high-grade gold veins, discarding 50,000+ tons of dump ore that still contain recoverable ounces of PMs and PGMs.
 - With metals prices too low and traditional recovery methods either uneconomic or prohibited in Arizona, prior attempts were impossible.
 - Today, with markets at historic highs, Native Metals has solved the dual-recovery challenge: Our proprietary, environmentally safe process extracts both PMs and PGMs—where conventional refiners would sacrifice one to recover the other.
 - With no competition and immediate access to these stockpiles, the opportunity is as rare as it is timely.

One of Alvarado's ore dump sites.

Maximizing Profit

- **Mitigating Risk**, We scoop, we don't dig! Our resource is not a deep, oven vein; it's a known, accessible stockpile of over 50,000 tons of dump ore.
- **Simple and Scalable**: We crush and process the ore in a **mobile, modular circuit**, not a multi-million dollar fixed facility.
- **Visible Results**: The magic isn't in expensive exploration. It's in our proven process that delivers **predictable, tangible results** from day one. We get to see and touch the metal before the work even begins.

Independent assays from leading Arizona labs confirm recoverable ounces of PMs and PGMs in Alvarado's dump ore. With each new processing circuit and permit approval, our monthly surplus increases.

Year 1: Projected upside of **\$2 million**, based on current circuits and throughput.

5-Year Outlook: As we self-finance expansion into multiple PGM leaching circuits, surplus is projected to exceed **\$300 million**, supported by strong metals pricing and proprietary dual-recovery technology.

This growth trajectory reflects tested ore, proven metallurgy, and a phased expansion strategy—minimizing risk while unlocking extraordinary upside.

Scaling Surplus Through Proven Recovery

Native Metals, LLC Assets

The combined value of the 115 acres that constitutes the Alvarado Mine property, its buildings, mining equipment, mineral and water rights, exceeds the sum of \$3,500,000.
